[Skip to Navigation] Vascular malformations are abnormal developments in blood vessels. Some VMs may be present at birth (congenitas) or acquired (grow over time). Many will require some kind of treatment. The diagnosis and treatment will depend on your specific type of VM. Vascular malformations (VMs) include: The lymphatic system includes a network of small tubular vessels that extend throughout the body. These vessels collect and transport lymphatic fluid from tissues and organs through © the lymphatic number of the lymphatic system, is © part of the body's immune system. A lymphatic malformation (LM) occurs when a deformed lymphatic vessel traps the lymphatic fluid. The trapped fluid forms a cyst, which can go one and the blood circulation. This network, called the lymphatic system, is © part of the body's immune system. A lymphatic malformation (LM) occurs when a deformed lymphatic vessel traps the lymphatic fluid. The trapped fluid forms a cyst, which can go one of the lymphatic malformation (LM) occurs when a deformed lymphatic vessel traps the lymphatic fluid.
