The intrusion module is located in the passenger compartment. This unit is designed to work in conjunction with the intru sion sensor transmitter and intrusion sensor receiver to provide interior motion detection and serves as the interface between the Forward Control Module FCM, the Concealed within the molded plastic housing is the circuitry of the module, which includes a microprocessor. The module is con nected to the vehicle electrical system by a connector of the body wire harness. The module uses OnBoard Diagnostics OBD and can communicate with other modules in the vehicle as well as with a diagnostic scan tool using the Controller Area Network CAN data bus. This method of communication is used by the module to communicate with the Forward Control Module FCM and the ElectroMechanical Instrument Cluster EMIC, sometimes referred to as the Cab Compartment Node CCN. The module also communicates with the alarm siren over a dedicated

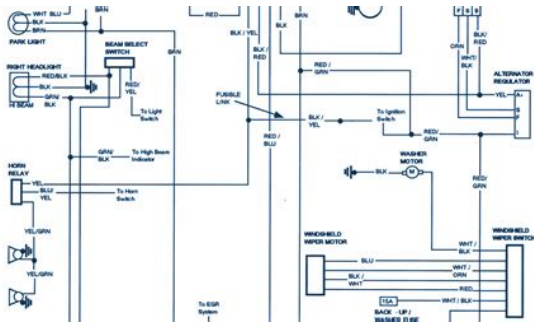

serial bus circuit.

The module energizes the intrusion sensor transmitter, which transmits ultrasonic signals into the vehicle cabin through a transmit transducer, then monitors the current draw of the transmitter to detect problems with the transmitter and transmitter circuits. The module also energizes the intrusion sensor receiver, which listens to the ultrasonic signals through a receive transducer as they bounce off of objects in the vehicle interior, then monitors the current draw of the receiver for data signals and to detect problems with the receiver and receiver circuits. If an object is moving in the interior, a detection circuit in the module senses this movement through the modulation of the returning data signals from the receiver. An active fault only remains for the current ignition switch cycle, while a stored fault causes a DTC to be stored in memory by the module. If a fault does not recur for 50 ignition cycles, the module will automatically erase the stored DTC. These connections allow the module to remain operational, regardless of the ignition switch position. Use a diagnostic scan tool and refer to the appropriate diagnostic information for proper diagnosis of the system. The premium version of the VTSS is only available in vehicles built for certain markets, where the additional features offered by this system are required. This unit is designed to work in conjunction with the intrusion sensor receiver to provide interior motion detection inputs to the intrusion module, which serves as the interface between the Forward Control Module. The trim bezel has a small round opening that faces the front of the vehicle through which the transducer is aimed. Concealed within the molded plastic transmitter housing is the circuitry of the transmitter which includes an ultrasonic transmit transducer 1. The transmitter mounting bracket is serviced as a unit with the headliner. The transducer trim bezel is available for separate service replacement.

This unit is designed to work in conjunction with the intrusion sensor transmitter to provide interior motion detection inputs to the intrusion module, which serves as the interface between the Forward Control Module FCM, the The ultra sonic receiver transducer 2 is aimed through a small dedicated round opening in the overhead console for ward of the reading lamps and is the only evidence of the receiver that is visible from the passenger compartment. The receiver is con nected to the vehicle electrical system wire harness that is integral to the headliner. The receiver mounting bracket is serviced as a unit with the overhead console. The transmitter gener ates ultrasonic signals into the vehicle cabin through a transmit transducer. Then the intrusion sensor receiver lis tens to the returning signals as they bounce off of objects in the vehicle interior and provides input signals to the intrusion module. If an object is moving in the interior, a detection circuit in the intrusion module senses this move ment through the modulation of the returning signals that occur due to the Doppler effect. The intrusion module monitors the current draw of the transmitter circuits to determine the condition of the transmitter and, if the draw is too high or too low, it will store a Diagnostic Trouble Code DTC for any fault that is detected. And with no cloth scrim, there's no worry of excess paint clumping or soaking in. Plus, magnets allow them to snap on and off quickly. Installation is quick and easy with standard dogleg clamps. Before purchasing I read a report that they was a little bass light but they are superb. More than enough bass for me personally. Great buy. However I simply added a REL T Zero active sub to work with them it uses speaker level inputs so was easy to run wires from the 791 down to the sub on the floor I was hoping for more bass but beware each ceiling will have a bigger influence on bass etc, depending on what's

behind the speaker. I have a Speakercraft bathroom speaker similar cost and same driver size to 791 and it produces exactly the same bass as the Bose speaker. I actually added badges to mine as although I love the fact these speakers blend in I do like a badge so Bose why not include self adhesive badges. Easy to install as well. Otherwise they are great ceiling speakers The difficulty of running speaker wire varies greatly depending on the house. Wireless Mouse. Vertical design for good hand feeling.
