Confluence 3.5 Exporting Pages and Wiki spaces to a PDF, HTML or XML. Go to Wiki.Colby.edu and Login (top right) VÁ to the wiki space you want to export. open the Browse menu and select AvanÁado Click Export PDF, HTML or XML. Export in the left pane. This option the f serÁ; Only Visible if you have permission f the space of the f exportation, check the box f Selecting the Include comments you want to include comments for shovel Ginas that you are exporting, select the pages you want to export by selecting the selecting boxes in the f f existiÁÁ the pages of Árvors. By default the f all pages sÁ f o selected. You have the option of selecting the f all or deselect all pages if you select the box Selecting the f a page that tells © m one or more pages son or offspring, all these pages son and descendants Tamba © m will be the f selected. Similarly, if you clear the box Selecting f in such a page, all its child pages and descendants Tamba © m will be the f erased. This provides a mA © all convenient to the exportation f subÁrteses, capÁtulos or seÁÁÁpes within a document Click Export "This criarÁ a PDF or zip files when the process of exportation f o finished, download the compressed file as requested and extract the files in a folder, of course, this can be explained. Á rather extensive ... the exportaÁÁÁpes PDF can be customized for all managers. the personalizaÁÁÁpes PDF in confliuÁncia use a combination of the f HTML and CSS (cascading style sheets) You will need to edit one or both of the following: the PDF layout uses HTML to define the structure of the exported Content Display name history, as the title of bread igma and Heading Keyword or rodapÁ ©. the PDF style model uses the CSS to change the vÁrios design elements in the exported Content Display name history, as the size and margins of the page, and the background color. to set a global PDF layout, click the gear in Acone Heading Keyword Confluence and then cli that in "ConfiguraÁÁ f general." Scroll the minutes © f seÁÁÁ the sidebar titled Á e Á, ~ "Look and feel - . And click Á e Á ~ ~ e Á layoutÁ PDF Here you can edit the different layouts of the site . to change the PDF layout to the whole space, click on "mirror Tools" at the bottom of the sidebar and then "Á e Á, ~" look and feel. Click to Á e layout ~ ", Á ~ Custom HTML can be inserted here for the three following elements: PDF Spacebar f exportation of the page title, Heading Keyword exportation of f the space in PDF and PDF Export Rooter. Enter your Changes in the text box of each element. The PDF layout customized accepts HTML CÁdigo CSS inline. To comeÁsar with Stylesheet PDF, download the rules Padra f the CSS to PDF Export Stylesheet the following address: ConfluencedefaultPdf.css by default the f, exporting to PDF on the f includes a page of title, cabeÁsalhos or rodapÁ © s. These sÁ f given in the PDF layout. To customize the PDF Global Export Stylesheet: Click the gear in Acone Heading Keyword Confluence and then click Brook and "ConfiguraÁÁ f general the sidebar. go to ATA © seÁÁÁ f o." Sent ", then click" Á PDF StylesheetÁ e Á ~. Click Edit, and now you can enter your Direct dial f CSS custom that irÁ styling all elements that sÁ f o exported, including the page title, and Heading Keyword rodapÁ ©. To create a custom CSS style to be used within A single space, click "Tools spaces" at the bottom of the sidebar, f Enta the "Á e Á, ~" look and feel. Click - click "PDF Stylesheet" Enta f o Á e Á, ~ "edit e Á ~ f Enter Direct dial CSS and then click Á e ~ Á Save For best.. comprehension f o, please watch our vÁdeos # 57-1 and # 57-2 of sÁ © rie tutorial video is e Á ~ "Learn to confluíncia the atÁsio. You tamba © m can refer to the original documentation f Atlassian this page. The Export Account menu © m the following options for the exportation f: Read about descriptions of all opÁÁÁpes or skip ahead using the links below. exporting to You can export wireframes in your project like PDF, which can be useful for impressions, sending by email, displaying clients or posting online. The PDF will be created in high resolution and with selectable text (good for your team to copy / paste). If your wireframes contain links, these will work in your exported PDF too, which will allow you to create Create Prototypes of your projects. (To learn more about Binding, see Linking Wireframes Together.) To export to PDF, select the project> Export PDF Option ... Menu to (CTRL / A + P shortcut). Each wireframe will be displayed on a separate page of a PDF document. Wireframes will be in the same order as in the project, to organize them in the order you would like before exporting. You can choose to export all wireframes or a subset, including the alternates you have created. The PDF export options are shown here. Exporting to an image to save one or all of your wireframes as image files, choose one of the exports to PNG commands from the project menus> Export> Export> Current Wireframe for PNG ... will save the selected wireframe In PNG Export Image Format> All wireframes for PNG ... will save all wireframes in your project as a separate image Files shortcuts to the export of a wireframe and design for image files are CTRL / A + R and CTRL / A + SHIFT + R, respectively. Exporting all wireframes will also generate images for the substitutes you have created. You can also export a subset of the controls on your wireframe by selecting them on the screen and use the current wireframe PNG command. The export dialog will ask if you want to export only the selected controls or all wireframe. Exporting Wireframes to another project sometimes you may want to copy or move a wireframe (or some) from one project to another. Here is a simple way to do it: Open the two projects (each in your own browser or window) in the code project, select the wireframe (s) you want to copy or move copy wireframe (s) Ctrl / Á e + c) In the destination project, paste your wireframe (s) (Ctrl / A + V) That is that! Now you can delete wireframe (s) from the code project, if you wish. This simple method works on all our Balsamiq wireframes products. Exporting a project to other Balsamiq products you can easily export a project to another Balsamiq product (using the .bmp extension) using the project> Download BMPR ... Option. Confluence provides a basic PDF exports that you can customize and style to meet your needs.Á, you need Administrator Permissions Space to customize PDF exports in a confluence administrator espaÁo Global permissions to customize PDF exports to the entire site.Á, when someone exporting a space for PDF, Confluence apply any layout and styling directions finds in the current space or set globally For the site set. Appearance of the PDF. You can change just about anything, including paper size, fountains and colors, spacing and control behaviors like página breaks.Á, both the PDF layout and style PDF can be customized in a space based on Space, or globally for any site. Customizations An Always Completley Space Replace any global customizations. This means that you can not mix and combine and set some items globally and others in Level space. There are some limitations to take into account: Changes in the PDF layout apply only to exports Exports from a single page (via a> export to PDF). A confluency Server and Data Center Exports process space slightly different. This means that some options, such as adding CSS page numbers, are not available in PDFs created with the data center. We recommend selecting includes page numbers on the export screen, if you need to your pages number. There, we provide a séci of examples of customizations for you. However Atlassian support can not help you with styling your PDFs or problems introduced by your personalizations. If you are Newa CSS, you may want to get help from Ana Atlassian Solution Partner, or check out a Market APP LIKEA scroll pdf exporterÁ, who has a Wysiwyg editor to help produce beautifully decorated pdfs.Á, change the PDF Layoutthe PDF Disposition is where you add a title page, header or footage to for PDF exports.Á PDF layout fields accept HTML. You can include CSS online in HTML too.To change the PDF layout for the whole site: Go Toa Á> General ConfigurationÁ> Á PDF Layout. You need Confluence global write permissions administrator to this.Á You Needa Choose Edit, then add your personalizaÁÁÁpes the title, Heading Keyword or rodapÁ © fields.To change the PDF layout for especÁfico space: VAIN (to the espaÁoee chooseÁ Spacebar toolsÁ> Á look and sidebarÁ background FeelÁ you Needa space of f administraÁÁÁ the permissionsÁ do this.Á Choose Edit PDF Layout.Choose, thena add your personalizaÁÁÁpes the title, Heading Keyword or rodapÁ © fieldsPDF examplesHere layout is the f some examples of things you can do in the PDF Layout.Á the PDF layout can accept HTML and online CSS.Á title pageln this example we will add the "Documentation for the f Confluence" title, a logo and an additional title "Content Display name history" above conteÁdos table. Documentation for the f Confluence < div class = "tocTitle"> Content Display name history the logo image used estÁ; connected to a Confluence page on the same site. You can find out the ID attachment with the button f right the image on the page, and copying your location.In this example we will add simple text to the rodapÁ © with some copyright information, and included a link.
