View cart for details.User Agreement, Privacy, Cookies and AdChoice Norton Secured powered by Verisign. Kawasaki returned in 1978 with a limited production and totally revised KX240A4. The 1980 KX models were the first to use a modern singleshock rear suspension. Watercooling and front disk brake were instituted with the 1982 models.This differed from their earlier efforts in that it wasnt an offshoot of a mainly enduro themed machine.

<http://eventoslanoria.com/images/canon-irc624-service-manual.pdf>

It began a line of production motocrossers that are highly respected for their strength and competitiveness. Kawasaki has always followed a route of continuous development for their KX series lending them to always be competitive and for the speed at which factory racing developments make it into the production machines. Power was moderated via the wet multidisc, manual. The KX250 was fitted with a 1.66 Gallon 6.30 Liters fuel tank. The bike weighed just 203.93 pounds 92.5 Kg. The wheelbase was 58.19 inches 1478 mm long. New front hub design. Mikuni VM38SS carburetor. Kayaba front forks. remote reservoir rear shocks with 9in of wheel travel. Offered 11in of wheel travel. It sport a steel frame designed to provide the ultimate rigidity with minimal weight and the reengineered swingarm now boasts new sporty linkage angles for better response to the demands of the discerning pilot. With separate air and oil chambers, the front Kayaba suspension is fully adjustable and can offer innumerable setups when combined with the 16way adjustable compression and rebound rear shock. The 249cc 2stroke engine is no toy it produces more than 58 hp, so the addition of petal brake discs is a most welcome upgrade. The suspensions of the 2005 Kawasaki KX250 provide innumerable setup positions, thanks to the massive 48 mm oleopneumatic Kayaba forks and new UniTrak rear shock. The bike weighs in at only 97 kg 214 lbs and that's one of the reasons for eliminating the electric starter. The lightweight construction is also helped by the steel frame. First of all, the bike is not streetlegal it has no headlight and blinkers so it is to be ridden on the dirt and motocross tracks, nonpublic roads or wilderness trails. The 58 hp 43.3 Kw 2stroke liquidcooled engine is no toy and for dependable stopping force, racingclass petal disc brakes have been installed.

Suspensions are fully adjustable and can provide with a plethora of finelytuned setups for any rider and any riding style on a variety of surfaces. The Kayaba Air Oil System fork and the lightweight, but rigid frame are responsible for the easy handling of the 2006 Kawasaki KX250 even through the sharpest turns. You can enjoy it on the dirt tracks or mountain trails, or nonpublic roads, however. Given the aggressive and explosive character of the power unit, the 2007 KX250 comes with petal disc brakes for dependable stopping force, while the design of the very rotors keep them clean, with no dust or mud diminishing their capabilities. The perimeter steel frame is both light and rigid,

offering great handling, especially with the 2007 KX250 weighing only 97 kg 214 lbs. Fullyadjustable suspensions make this bike suitable for pretty much any rider and any riding style on a variety of surface types.You can help Cycle Chaos by expanding it.
