C35i manual

Information about disturbance is sent in a form of phone call with warning signal or in a form of SMS message to your cell phone or by fax, even by email if required. There is also a connector for data cable for connection to a PC that enables comfortable set up of required configuration data. Before assembly prove by cell phone if there is sufficient level of signal required by GSM network in selected place. Pay attention to delay in indicating of signal level. Do not attempt to connect other phones, it may cause device or phone damage. It is possible to set up volume of cell phone ringing according to your need in main menu. Ringing of the phone can be eventually switched off completely. It is possible to change or switch off the sound indicating reception of SMS message either. At the same time advises of necessity of switching off the phone by red key. This way new PIN is entered into GSM Remote Supervision memory and connected cell phone is automatically switched on. PIN 0000 shall not be set into cell phone from gate so that blockage of phone is not caused during first contacts with gate. Example Original PIN of GSM gate is 0000. SIM card, which you use in cell phone in GSM gate has PIN 1234 and is blocked by PIN. Phone rings only 5s and does not await pickup. This way record about calling from GB 051 is entered on display of cell phone without any charges unless called party picks it up. It is not recommended to set your cell phone number because GB 051 does not use real time and call can come during night. Each prepared text of SMS message of particular input can be sent to two cell phone numbers. No number is activated from production. These numbers can be set. Activated by input No. Four digits of current PIN Maximum 14 digits of cell phone number Output Four digits of current PIN Figure 0 or 1 determines logical level of output By sending value 0 output is set to 0V.http://cichanski.com/Upload/delta-18-scroll-saw-manual.xml

However, it is not able to switch on the cell phone without external power supply and therefore command RESET is ignored. Guarantee applies only to goods registered or identified by company LEVEL. Guarantee repair will be carried out at latest within 10 working days after receipt of defective goods by company LEVEL provided that spare part is disposable in store. GSM Remote Supervision GB 051 allows firstclass and highly effective protection of cars or properties. It provides protection which cannot be easily disabled by cutting the phone line, protection which sends an ALARM message within 3 seconds and which allows also continuous control of protected areaCommunication cable with connector gets out of this box into cell phone, which is used by GB 051 for realization of phone connection and reception and sending of SMS messages.During assembly avoid hot places and places where device would be exposed to direThe value of days in service will be set to 0. INIT Detailed description of how to carry on the initialization can be found in Chapter 4.1. The GSM Remote Control device will be set into default manufacturer's settings by the initialization. Recommended linkage of outputs Recommended linkage of inputs If GSM signal is insufAfter reception of this SMS message verify correct PIN code change by switching the phone off with the red phone buPIN 0000 shall not be set into cell phone from gate so that blockage of phone is not caused during first contacts with gate. SIM card, which you use in cell phone in GSM gate has PIN 1234 and is blocked by PIN. Insert the SIM card into the mobile phone, but do not connect the GB 051 connector yet. Insert the required PIN in the mobile phone e.g. 1234. Go into tSender of Command receives message about correct reception of Command. In case you do not know preset PIN or you are not able to program for another reason then carry out hardwIf you want toSensitivity of cell phone builtin microphone might be relatively low.http://facades-et-traditions.com/actualites/delta-18-x-36-drum-sander-manual.xml
Therefore it is necessary to select a suitable placement of the unit in order to use this feature. 5. Programming from PC Comfortable way of setting of all GB 051 parameters from PC by the means of configuration program and serial cable with converter can be used. Were committed to dealing with such abuse according to the laws in your country of residence. When you submit a report, well investigate it and take the appropriate action. Well get back to you only if we require additional details or have more information to share. Note that email addresses and full names are not considered private information. Please mention this; Therefore, avoid filling in personal details. The manual is 1 mb in size. If you have not received an email, then probably have entered the wrong email address or your mailbox is too full. In addition, it may be that your ISP may have a maximum size for emails to receive. Check your email Please enter your email address. By using the site you are agreeing to our Privacy Policy.Learn more about what we're about. With "SmartSwitch," FDR DEVO no longer requires connection between the Xray generator and DR power supply unit to automatically detect Xrays and start image creation. With the enhanced visibility achieved by this technology, information in greater detail can be obtained from images. Fujifilm has created a new full spectrum optimization with dynamicrange control processing. This processing fully utilizes all of the exposure data captured and optimizes its image recognition output. Enhancing visualization of the entire image within the exposure field, even significantly clarifying overexposed and underexposed areas. The effect can be adapted to CR images as well. Allowing clearer detail images regardless of a type of detector. This innovative image display optimization has been built to enhance diagnostic viewing with just about any display on the market. Providing easytointerpret and rich gradation.

Through an indepth analysis of conventional image processing parameters, we developed a brand new set of automated menu parameters specifically designed to improve sharpness, contrast, and latitude for every anatomic menu. These new parameters enable the best possible first up display for every exam. This technology permits a higher resolution image and reduced doses. Quick reexposure is also possible, with no need to have patients wait. High throughput is realized, reducing the examination time significantly. With easier editing procedures, images in sizes most suitable for diagnosis are provided. The mode is automatically switched in only 1 sec.When used as a wireless portable type, tabletop exposures are easily performed, allowing exposure situations to be expanded.

Xray procedures run smoothly without any worry about the state of the battery. The battery lasts about 3.5 hours. The charger is common in the FDR DEVO series. Even if the battery level becomes low in the wireless mode, Xray procedures can be carried out without interruption by attaching the cable. The SE cable is common in the FDR DEVO series. The image display area on the display monitor is larger, and enables easy checking of diagnostic images. An optional touch panel monitor ensures quick and accurate operation. 1 The f irst th ing yo u will e xpe rien ce is h ow t he housing i s lock ed. In C 35 no screw s are us ed to keep the housi ng closed. Al so insi de the telephone no sc rews ar e used anym ore. To open the housing, w hich i s kept cl osed by catches only, a spec ial openi ng tool has been defined. For detail s on disas sembly tool pleas e refer to Photo 2.3 i n this chapter. I nside, the C35 c onsists of just one boar d 1010 which c arri es displ ay modul e1170, control part and R F secti on of the mobi le. The dis play m odule 1170 is connec ted to the board by a flexi ble cabl e which i s inser ted into a plug. I n case the di splay i s defective elec tric ally or mechani call y it can be ex changed very easil y. C35 does hav e an external connector of a new type. Si nce S6 a so cal led "M ol ex" connector was us ed, which also of f ered th e p ossib ility to c onnect an exter nal antenna to it. T he new "Lum berg" connector whic h is used i n C35 does not feature such a c onnection, becaus e the connector f or exter nal antenna i s located at the back side of the upper end of the mobil e, close to the inter nal antenna 1130. As a consequenc e of this ther e is no need anym ore for a RF cable m ounted to the board nor f or a RF plug on it to c onnect this c able. Thi s im proves R F proper ties of the mobil e and lower s produc tion costs. To be able to do m easurem ents on and softwar e update of the telephone, an adapter c able between M ol ex and Lumber g connector will b e a vaila ble. See photos in Addi tional T ools of Chapter 3. C35 ser ies antenna i s of a snapin ty pe which i nserted i nto the lower case shel l 1030. The antenna can only be changed by openi ng up the C35 phone. The C35 is a dualband m obile operating on GSM900 and GSM1800, the antenna is an integr al part of the lower housing. The key pad 1150, the m icr ophone 1110 and the loudspeaker 1120 are mounted i nto the upper c ase shell 1020.

M ak e sure that the mi crophone and the ear phone contact spr ings ar e not dir ty or dam aged duri ng repair proc ess. The dust pr otection fram e and the display window are inc luded in the di splay m odule1170. 1 The Voic e CODEC part is used to real ize advanc ed f eatures r egarding c oding of the speech s ignal.Since the batter y vol tage is suppl ying the pow er suppl y ASIC, it i s always s needed to operate the phone. Y ou ca nnot swi tch on the handset if the batte ry volt a ge is not present. Fr om the battery v oltage, all other suppl y vol tages are der ived and c ontroll ed by the power supply ASIC. The RF power am plifier is di rectl y connect to the batter y, a bad battery w ith hi gh internal res istanc e can cause m alfunction of the C35 phone.Make sure that the charging cu rr ent is limited to value belo w 1A. Battery C35 seri es us es a Ni ckel M etal Hyr ide N iM H 500mAH battery pac k as standar d battery. I t also suppor t the Lithi um I on 600mAH battery pack For S35i phone as optional batter y for custom er want longer talk ti me. PHOT O 2.32 C35 SERIES

INSERTIN G BAT T ERY. I f the temperature is too high or too low, th ere is a high probability that the battery is not char ged. To enable the charging pr ocess again, batter y and phone needs to cools down or warm up. Batter y replacem ent is not requir ed. A void sh ortin g the batter y ter min als. Short Ci rcuit Protecti on For the Nic kel M etal H ydri de batter y, a polysw itch i n the battery pack protecti ng the battery from short c irc uit and it shoul d reset by i tself af ter som e time rem oving the shor t cir cuit. For th e L ith ium Ion ba tte ry, it is sho rtcircuit p rot ect ed by a n e lect ron ics f use. Th e f u se will b e activa te d in ca se a to o h igh cu rren t is d rawn. This f u se will not re set automati call y. The r esetting of the Lion batter y fuse can be done with ei ther of the f ollow ing proc edures 1.
