Sky later supplied a DG934G router, which is a DG834G v3 router in a black case. It has modifications to support AnnexB ADSL.It has six internal antennas, and is easily recognised by the blue dome on the top of its case.This has led to popularity among computer enthusiasts as it provides a cheaper alternative to a Linux router. As a result, various individuals and projects have produced modified firmware which extend the capabilities of the builtin firmware.On default Netgear firmware Telnet

access lacks password or other control; on ISP modified versions such as Sky a Telnet password exists based on the MAC address which can be found via online websites. Grey case, larger than subsequent models. 15 V AC power supply. <http://apricomm.com/userData/board/brass-eagle-stingray-2-manual.xml>

TIAR7 chipset MIPS32 CPU, 16 MB of SDRAM, 4 MB of flash memory. G versions have black removable antenna at the rear left, using an RPSMA connector. Different power supply requirements from v1, otherwise almost identical electrically uses same firmware as v1. G versions have white removable antenna. Now uses Broadcom BCM6348 V0.7 chipset, also the Ethernet switch is now Broadcom BCM5325 previously, it was Marvell and the wifi module is branded Broadcom previously it was Texas Instruments. The 4 Ethernet LEDs are now on the left of the front panel all previous models had them to the right. The antenna is attached to the board with a uFL connector so an upgrade would be possible by somebody willing to void their warranty. Comes with additional buttons for power, Push n Connect using WiFi Protected Setup, and for switching the wireless radio on and off. Reset is achieved by holding in both side buttons simultaneously for about 6 seconds until power light flashes. The chipset used is a Conexant CX94610 which has an ARM CPU all previous models used a MIPS CPU. White case with a white removable antenna to the rear left of the unit which utilises an RPSMA connector. By using this site, you agree to the Terms of Use and Privacy Policy. No support is given for this tutorial. You will need to use this in a moment. To do this, use a pen or similar object to press and hold the small reset switch on the back of the router whilst turning the router on. The two lights on the front of the router should be flashing alternately. Open the CD in Windows Explorer and browse to the Utilities\Netgear folder. If there is more than one, select the one which is connected to the Sky router. Click Next Be sure to complete the following steps before clicking Next in the Upgrade Wizard. This is to minimise the risk of the computer crashing during the upgrade process. Click on Close to exit the upgrade wizard.

It is therefore recommended that if you use Vista, to upgrade using an XP machine or alternatively set RmDrv.exe and UpgradeWizard.exe to run in compatibility mode. Please bare with us. Post count is not increased by posting here. FTP Access status is required to post in this forum. Find out how to get it Post count is not increased by posting here. FTP Access status is required to post in this forum. Find out how to get it Even the configuration page is Sky branded. Do you think there is a way to flash the normal retail firmware onto it. Its just I dont have the ability to portforward with the Sky branded config. Be a good person, but find what being a good person means to you. No, plus Ive looked in every area, but there is no mention or screen for portforwarding. Be a good person, but find what being a good person means to you. No idea, Ill have a look later. Ill get back to you. Be a good person, but find what being a good person means to you. Deadline 2 days. Failing that do as above and flash to the original firmware. You can find out which one you want by looking at the model and version number on the bottom of the router. Failing that do as above and flash to the original firmware. You can find out which one you want by looking at the model and version number on the bottom of the router. As I said. Ive looked everywhere. Er, I dont think Ill take the risk, I mean, it works fine, so. Nah, Ill leave it. Topic can be locked Yours may not be a v2 DG934 though. The ones Ive got dont include ADSL modems though, if youre on ADSL they may not be what you need unless you can get a separate modem. The ones Ive got dont include ADSL modems though, if youre on ADSL they may not be what you need unless you can get a separate modem. Just got the WRT54GL from amazon. Its so much better than my dying Netgear was. Here i was thinking it was my ISP for over a year, and it was really just my old POS router dying. Netgear DG934G firmware.

It may not display this or other websites correctly. You should upgrade or use an alternative browser. Apparently they are also sourcing routers from sagem. My write up is here. As for flashing the new one, unconfirmed reports suggest that it is hard to do, but not impossible. But would result in your Sky Username being erased before giving you chance to record it, rendering it useless for Sky connections. Flashing was not categorically ruled out though.

Shame really as Im sure a lot of people would rather use their own routers and just keep the Sky ones in case they need to contact support, especially if they already own far superior models. So that alone would rule the DSLAM method out. If it was really that easy to get the password details, people would be buying cheap Ciscos off Ebay with ADSL WICS and configuring them as COE central office equipment i.e. DSLAM equipment.The same for PAP I would have thought as well. Yes it is a shame, but having used the new router so far so good and I have to say flawless. Even the UPnP which never worked before works. So hopefully new customers who receive the black one, will have no requirement for the use of their own router. Most users who are more technical would complain about this, Joe Bloggs the average internet user, would probably be satisfied as it is. Simple, easy, ergonomically pleasing and it just works. I for one am fairly technical, but in my environment at home it does everything I need. For my mother in law, exactly the same and so on. I would also bet that the wireless is better on the new one anyway, in the manual it quite clearly states up to 100 metres for reception, depending on course of certain factors. I know my reception is certainly better. This does not negate the fact that those with white routers have access to their

username and passwords and so could do with theirs what you are saying. Well up to the new FW update anyway, and afaik the new FW on the V1 is reversible, how ever every time it syncs with the exchange, would look for a newer version and then re update it. Ive experienced that myself many times with AOL, when I was trying to get them to fix a problem SSB Id guess their end which prevented authentication, had the password username etc been fixed I could have plugged in their router and skipped the router configuration 101 class which was repeated with each tier of support every time I rang.

crap It would have been better if theyd made telnet access available so the techies could extract their passwords or run scripts on their router if they wished. Hmm, as they apparently use the routers MAC code for the username, I wonder if they have plans to switch to IPOA on their DSLAMs, which wouldnt require a password . I believe the firmware on the Sky gt attempts to update monthly, it would be trivial to prevent it, but also pointless as you might as well reflash it with the latest standard firmware. I believe Ive read the standard GT router uses a far superior newer version of the adsl modem software and as the Sky update is likely to include this, it should significantly improve the router. After flashing an Asus router to Tomato firmware, can I go back to Asus. GUI nvram clear must not be used otherwise it goes back into firmware restoration mode; RTN10 LX This model is totally different. Please check the Asus manual..
