You can also press pairs of footswitches to activate the LearnALick™ feature, bypass individual effects or the entire preset, access the tuner, or change the Footswitch modes. Each time the mode is changed, the name of the new mode will be displayed briefly. Choose the Warped channel to hear a unique amp and cabinet combination based on the amps and cabinets assigned to the Channel 1 and Channel 2. LearnALick™, Bypass, Tuner and Mode functions are accessed by pressing the labeled pair of FOOTSWITCHES. For example Each time the mode is changed, the name of the new mode is displayed briefly. Split 2 is the same as Split 1 but the guitar signal is also routed out the XLR OUTPUTS. See page 99 for a list of drum patterns and page 128 for a list of samples. Most GNX3000 parameters can be assigned to the EXPRESSION PEDAL. Applying extra pressure to the toe of the EXPRESSION PEDAL changes the EXPRESSION PEDAL's function to control the Wah. Line signals can remain dry or be processed through the GNX3000's effects for live and recording applications see page 25 for more information. DO NOT connect a mono plug to this jack, as it may damage the output driver. MIDI preset changes and CC control messages received from external MIDI devices connected to the MIDI In jack can be used to control the GNX3000 and its preset parameters. When the GNX3000 is connected to the computer Press the EXIT button to save your selection. Speaker Compensation can be turned on and off Depending on which application you are using them for, you can enable or disable Speaker Compensation on either output pair independently. If you want to use one set of outputs for running into This can be done one of two ways on the GNX3000 While singing or during an acoustic performance, adjust the MIC INPUT level

on the back panel of the GNX3000 until the CLIP LED next to the CONTROL PANEL lights only occasionally during the loudest parts of the performance.<http://aduanaldelvalle.com/userfiles/buy-manual-transmission-cars.xml>

If the signal is weak and cannot For many GNX3000 users, its primary purpose will be for use in live performances. The following diagrams show examples of how to utilize the GNX3000 in typical live performance applications. Using two cabinets gives you much more dramatic stereo separation and helps widen the sweet spot for your sound when you move onstage. Another great idea is to run the XLR OUTPUTS directly into the house P.A. and have the sound engineer control your front of house volume in the overall mix. Then if you need to turn up your stage volume, you won't upset him by trying to rebalance your guitar volume in the house mix. This diagram demonstrates a typical, large stage performance setup. Shown below is a typical recording setup. Connect your guitar or bass to the GNX3000's GUITAR INPUT and use the amp models for tracking your guitar and bass parts. Next, plug in the mic and get your vocal or acoustic performance nailed. You can even add line level instruments or feeds from submixes in and record these and all of this completely handsfree. Even your MIDI keyboard performance can be recorded so you can try the part with different synth voices later. Since the GNX3000 has professional BALANCED OUTPUTS, you can plug directly into your favorite powered monitors and get the bonus of latency free recording to boot. For more information about computer recording, see page 101. To adjust your microphone input level for optimal use see Mic Level Optimization on page 26. Connect the other end of the PSS3 power supply to an AC outlet. Presets can be recalled with the FOOTSWITCHES or the DATA WHEEL. The GNX3000 comes with 65 Factory 1, 65 Factory 2, and 65 User presets. The Factory Presets do not let you store changes to them. The User presets let you store changes. From the factory, the 65 User presets are exact duplicates from the 65 Factory 1 and Factory 2 presets. This lets you create your own presets without worrying about losing any of the original presets.

When you select a preset, the name of the preset appears in the green display and the number of the preset appears in the red numeric display. The USER LED to the left of the DATA WHEEL lights indicating the User preset is active, or the FACTORY 1 or FACTORY 2 LED lights indicating a Factory preset is active. This is very useful for picking out the notes of a fast guitar solo. Set the volume level of the player to match the level of your guitar. The display The display reads RECORD. The red numeric display provides a time elapsed reference while recording is in process. When recording is complete, the recorded passage is set in an autoloop playback, indicated by play appearing in the display. When the GNX3000 is bypassed, the display reads BYPASS and all LEDs in the Matrix turn off. Press any Footswitch to exit Bypass and return to the last preset. The Matrix and Programming buttons do not function when Bypass is activated. To bypass the GNX3000's presets while Preset Bounceback is enabled you must press FOOTSWITCHES 2 and 3 simultaneously.

Not only are 11 effects applicable at one time including several vocodertype effects, but the expression pedal can be loaded with up to three effect parameters. You could, for example, increase reverb, chorus depth, and gain all with the same pedal stroke. Extensive ins and outs make hookups easy, whether youre recording direct, playing live, or jamming in the studio. The rugged metal enclosure and widespaced pedals, along with 65 user memory locations, make the GNX3000 a natural for touring. A builtin drum machine has 80 preset patterns.

The included Pro Tracks Plus software accommodates all the GNX3000s features, such as MIDI control messages. Packed with features and ready to work with whatever technology you want to

interface with, the GNX3000 is a complete guitarists toolbox. 43 Amp Models Based on the most influential amps in history, the models contained in the GNX3000 can deliver virtually any sound a guitar can produce. Genetx MultiModeling Instead of one model of an overall tone, Genetx MultiModeling models the cabinet, including size and composition, the multiple gain stages, the feedback and tube saturation levelthe whole picture. This yields a much more complete picture of the modeled amp. 57 Total Effects A whopping 57 effects cover the gamut, and expand it a little. Vocoder effects are facilitated with the mic input, and any three parameters can be assigned to the expression pedal. HandsFree Recording The GNX3000s USB connection allows you to send command codes to your software to start, stop, rewind, and record, without taking your hands off your axe. Mic Preamp A quality mic preamp with always on phantom power not only lets you record vocals or acoustic instruments, but also provides the speech formants for the Talker effect, which is like a vocoder on steroids. The mics input can be output dry or affected. BuiltIn Drum Machine The integrated drum machine contains 80 presets. You can play along with a beat, and have it recorded with your guitar, or left out. Included Software Pro Tracks Plus software comes bundled with the GNX3000, so you can get started recording right out of the box. Triple Assignable Expression Pedal The expression pedal can control up to three effect parameters at once. Bump up the gain and the reverb at once for solos, or increase delay feedback and bend the pitch for outerspace rock. Your imagination is the only limit. Ive had with a manual in French, so easy to understand, but nil takes time to capture everything he can do. SOUND QUALITY I have always been in DOD and Digitech, so I like the sounds coming out of the beast, but everyone may not agree. I play metal, and sounds send the potato in this style. With my acoustic Ibanez also get very nice sounds. OVERALL OPINION I use now for over 3 years.I do not use cons not live by, then I prefer separate pedals. My GNX3000 is only used at home, and to register.

The quality is top price, and I would do this choice, the evidence Ive just buy one of OCCAZ, my son who farted my USB port my fault, teach me to let my trainer cables anywhere . 3 of 4 people found this review helpful Did you find this review helpful yes no. Neither a simple multieffect, too. This is a Guitar Workstation, a concept initiated by Digitech many years ago.With a PC GNX3000 and we have a complete recording studio staff. It is designed to be connected to a computer or sound system. There, thats fine. It can be plugged into a guitar amp or low but at the cost of individual

settings depend on the insertion point input, loop or Poweramp in. In other words, it is doable but not really for. In terms of features, they are already listed. Missing the presence of a microphone preamp DBX. The power supply, 15V phantom, so a bit tight for some microphones. UTILIZATION Simple as pie, provided it is used properly and that people read the leaflet, of course. It has a rather intuitive PC software that simplifies configuration and editing. SOUND QUALITY When you know the hack. However, we can find a good guitar for clean tones, crunch or distorted at will. Special mention for the acoustic guitar simulator. Models for bass are fabulous. The preamp, DBX done a good job for the voice and the taking of acoustic instruments. The routing allows to assign the effects to the input line with a synth, it opens up new sonic territory. There is a community accessible through the Digitech site that makes available hundreds of presets, which provides a working basis inexhaustible. Those who think that GNX3000 is not able to release a proper distortion on a guitar there have obviously not done a tour. OVERALL OPINION It is the successor to the GNX4. He was abducted on 8 track and added a processor for even more realism in simulations.

And its actually the big problem of the machine the sudden, it looks like a beast pedal when we are in the presence of a Swiss Army knife for homestudioist, not a multipurpose. Its really designed to do everything and do it well. Even for the live, plugged into an amp rather than a guitar or bass sound, the result can be excellent. Obviously, if we expect a digital guitar pedalboard, it must be frankly skeptical by contacting the monster. But when it was chosen for what it is, it is happiness. 3 of 4 people found this review helpful Did you find this review helpful yes no. All What technology is used Analog, digital, light. Number Are they edited. All UTILIZATION The general configuration is it simple. No Editing sounds and effects is it easy. No The manual is clear and sufficient. Not clear at all. SOUND QUALITY The effects are they effective, responsive and realistic enough. Yes, but not good distos. Which instruments do you use ESP K. Hammett Which ones you prefer, you hate. Distos not great. The rest is ok. OVERALL OPINION How long have you use it. I ve one month, unwanted. What is so special that you like most and least. Its too complicated and dsistos are not good. UTILIZATION The manual is very complete. After I had already registered for a little bit of experience of home studio notably with magix so it seemed to me very simple one connects the beast is selected click on a track record of this party as easy as any other recorder pc. DIOS I admit its a little more complex for the amp simulations and parameterization of cranberry I had to get out the manual to understand but since I manage. Seriously the difficulties encountered eventuellement only come from the fact that this is horrible apareil complete and great opportunities. SOUND QUALITY So I use a cort elvz6 emg ACIF and a fender FM212R seriously and sounds are really not bad, I tried the same type at boss but nothing to do especially for the distortions that were horrible.

The cleans are a particularly impressive acoustic guitar modeling bleuffante. After every chorus delay wah ect are very good. The only downside for wha who does his job but is not taping not as she could be with the boss that surpasses the digitech on this point. Let me stop you right away if you want the fuzz or whatever its vintage, theres no lights, do not expect a huge distortion either, finally here is the digital ca. Other than that its one of the best workstation for my taste. Only my eyes and a competitor can be even higher zoom g9 2tt who also look monstrous in the same price range preamp lamp has two expression pedals and a wah and a volume for example but I could not try so I opted for the digitech. SOUND QUALITY All depends on the guitar amp but it does Vaus not a good combo amp or hybrid. OVERALL OPINION Here I buy without tros think in haste and was nonsense to think twice before buying it. 5 people did not find this review helpful Did you find this review helpful yes no. UTILIZATION The configuration seemed fairly difficult to beginners, the possibilities taient standards and I could not get my sound. Which makes sense with new hardware, the beginners it is not known how each effect Ragit. Over time and strength to hack and read the manual provided in English I understood how everything worked and now bte no secrets for me I think. You can also Tlcharger sounds prdfinis by a community of players on this site , which can help and provide a basis. In terms of hardware ct, the case in mtal immediately inspires confidence, its

solid. The pedals plastic are also of good quality TRS and are very stable. Other keys, FOR programming effects are plastic, the same as that of the pedals, and do absolutely no fear. APRS one year of use, I can tell you that bte Entire did not move a muscle. SOUND QUALITY The sound remains all the same synthetic, even if sometimes it happens that is well tonn to catch a hot fiddling its effects.

I deprecated this multieffects to those addicted to vintage, for against, mtalleux friends, go for it. The output quality is excellent nanmoins no hum or spitting. I do not see directly what effect could make me piti they are all good quality trs a nanmoins is multieffects. But do not count too much on the pedals like wahwah pedals, you will trsdu. One thing trs important that I forgot to mention the supermodels, who are none other than simulations DIFFERENT amp and speakers. For each patch, you can simus Defines two amps, two speaker DIFFERENT simus, and mix it all you want. The simulations are trsralistes for some, for others they simply mtamorphoseront your sound if you do not like that of your amp I use the Ibanez RG2550 with a beast, rises with humbuckers DiMarzio Evolution 1 and 2. As amp, nothing terrible and thats a shame Marshall MG100 HDFX. To this I added a wahwah Morley Bad Horsie 2. I get very easy sound of Vai with everything, I love her, but I would still keep its unique Personal. The kind of friend you might want to hit at times and that this can not happen. I tried the Boss and Zoom in the same price range before buying. Boss sounded horribly synthetic and remained Zoom Zoom issue got. Report qualitprix Obviously. I like the Digitech effects, again I Rasht, but with a different amp bnficiier its best quality. Now, each in its gots Contents of audio. 2 of 2 people found this review helpful Did you find this review helpful yes no. Full patch on the internet not too much tread ect. Since I don't gig anymore I don't need this one. Still factory set never been programmed, plugged in once, stored in the case, The manual however has some of my notes in it, can't find the new one if I find it by the time this sells I will swap.

The asio drivers are terrific, full surround mix with nuendo or cubase, little bit of a learning curve to use the Talker. Very nice unit. Thanks for looking. This is an awesome guitar effects processor and home recording solution. Complete with the GNX pedal board. The Hands Free foot switch is hard to find and originally sold separately, but you cannot use the recording feature without it, and I'm the only one on eBay selling their GNX with this footswitch which makes this the best deal on eBay. This pedal board has everything. If you are familiar with guitar gear. Then you know what this thing can do, and you have probably heard about them and even used one yourself. If not, then here is what you can do with it. First, you can use it as a basic stomp box effects board, complete. This is also an amp modeler, drum machine, mixer, and recorder. I have used this to improve my timing and rhythm playing, create and edit MP3 and wave files of my guitar recordings straight from the unit to the computer. This unit has 2 channels, and has just the best kickass tones that you can find on an effects board. This GNX has only been used in my bedroom and has never been out on the road. Although it is tough enough for any gig and can connect to any amp. This unit is in excellent shape and condition, works perfectly, every function, dial, button, and switch works perfectly and the board is almost as new as when it came out of the box. There are some minor scratches on the sides where some of the paint was rubbed off from moving it around on my floor, but that is the only thing you will find. There are no dings or dents and it has never been dropped or abused in any way. I live in a smoke and pet free environment and have been the only owner and user of this device. I'm selling this device because I have bought new equipment and just trying to make room Used but very well cared for. Includes power supply. gig bag. Owners manual and Pro Tracks Plus recording software.

Until now, critical listening has been the focus for referencing and reproducing amp models. It was like looking at one frame of film from a two-hour movie beautiful, but incomplete. Even cabinet size and composition are factored in. It more gets the whole picture, so you get the whole tone.
