Book Descriptions:

We have made it easy for you to find a PDF Ebooks without any digging. And by having access to our ebooks online or by storing it on your computer, you have convenient answers with DI360P G8 Manual . To get started finding DI360P G8 Manual , you are right to find our website which has a comprehensive collection of manuals listed.

Our library is the biggest of these that have literally hundreds of thousands of different products represented.

Book Descriptions:

DL360P G8 Manual

With HP Authentication it can verify that you have true HP Qualified Memory in your HP ProLiant Gen8 server. Memory population guidelines General Memory Population Rules and Guidelines White DIMM slots denote the first slot of a channel. For 1 DPC DIMM per channel populate white slots only. A minimum of one DIMM is required per server. Install DIMMs only if the corresponding processor is installed. If only one processor is installed in a two processor system, only half of the DIMM slots are available. To maximize performance, it is recommended to balance the total memory capacity between all installed processors and to load the channels similarly whenever possible. When two processors are installed, balance the DIMMs across the two processors. Populate DIMMs from heaviest load quadrant to lightest load singlerank within a channel. Heaviest load DIMM with most ranks within a channel goes furthest from the processor. RDIMMs operating at either 1.35V or 1.5V may be mixed in any order, but the system will power them at the higher voltage. Do not mix UDIMMs, RDIMMs orLRDIMMs. LRDIMMs are supported up to 3 DIMMs per channel. Using the HP RBSU, 1.35V DIMMs can be changed to operate at 1.5V. DIMMs of different speeds may be mixed in any order; the server will select a common optimal speed. The maximum memory speed is a function of the memory type, memory configuration, and processor model. The maximum memory capacity is a function of the memory type and number of installed processors. HP memory from previous generation servers is not compatible with the DL360p Gen8 Server. Certain HP SmartMemory features such as memory authentication and enhanced performance may not be supported. To realize the performance memory capabilities listed in this document, HP SmartMemory is required.<http://www.berliner-mauersteine.de/upload/canon-ir3300-copier-service-manual-pdf.xml>

Please try again. Please try again. Backed by the 90day Amazon Renewed Guarantee. Product may come in generic box. This product is eligible for a replacement or refund within 90 days of receipt if you are not satisfied under the Amazon Renewed Guarantee. The refurbishing process includes functionality testing, basic cleaning, inspection, and repackaging. The product ships with all relevant accessories, a minimum 90day warranty, and may arrive in a generic box. Only select sellers who maintain a high performance bar may offer Certified Refurbished products on Amazon.com Register a free business account Please try your search again later. Industry leading performance, efficiency, capacity and reliability. Enterprise enhanced design for all workloads with versatility for future requirements. A space conscious 2processor server with industry leading feature sets. Built to protect your investment and extend the life with reliability, accessibility and serviceability features designed in. This Certified Refurbished product is tested and certified to look and work like new.

The refurbishing process includes functionality testing, basic cleaning, inspection, and repackaging. The product ships with all relevant accessories, a minimum 90day warranty, and may arrive in a generic box. From Your Orders, click on Get Product Support. Amazon Renewed products will be packaged in either original packaging or in a new and clean cardboard box. Amazon Renewed products will be clean and will have minimal to no signs of wear or visible cosmetic imperfections when held at an arm's length. The products will have batteries which exceed 80% capacity relative to new and will function like new. We can also help you troubleshoot technical problems and assist with returns. Any returned computer that is damaged through customer misuse, is missing parts, or is in unsellable condition due to customer tampering will result in the customer being charged a higher restocking fee based on the condition of the product. Amazon.com will not accept returns of any desktop or notebook computer more than 30 days after you receive the shipment. New, used, and refurbished products purchased from Marketplace vendors are subject to the returns policy of the individual vendor. To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. Please try again later. Further, the BIOS was updated, and it looks to be current spec including ILO firmware. That's nice. The vendor did forget one of the two power supplies it was advertised with, but on contacting them through Amazon they immediately shipped out the 2nd power supply. EXCELLENT customer service and very much appreciated. The vendor is a credit to Amazon and this sort of customer service certainly builds confidence. Its working without any issues.

assist in the installation of the Please refer to your installation instructions for. Are overpriced OEM memory options wasting your organizations IT hardware budget We won't. We'll take you behind the closed doors of the memory industry. Here you can buy the same exact RAM installed in servers at the factory. Expert Technical Support Have a question about your HPE ProLiant DL360p Gen8 memory upgrade. Our technical support can help you with any question to ensure you get the best module option for your HPE ProLiant DL360p G8 system. 100% Guaranteed Compatible Get proven HPE ProLiant DL360p Gen8 memory upgrades here. We ship approved, certified and OEM qualified modules to ensure total HPE ProLiant DL360p G8 system memory reliability. Quick Advance Replacement Nothing is perfect. Sometimes things happen. We support your HPE ProLiant DL360p G8 memory purchase long after the sale. Meet the increasing demands of your applications with more HPE ProLiant DL360p Gen8 memory. Expand system performance with an upgrade at lower costs today.

DIMM Type Speed Configuration Guide Lifetime Warranty Lifetime Warranty Never worry. We support you long after the sale. LRDIMM, RDIMM and UDIMM Why are there various DIMM types supported. Factory configured DL360p Gen8 systems often have smaller, less expensive modules. As more memory is required different density and technologies are needed. DIMM type mixing is never recommended. What is a registered memory module. Registered DIMM memory modules have a register component between the DRAM modules and the motherboard memory controller. When manufactured as a dual inline memory module DIMM, a registered memory module is called an RDIMM. What is a load reduced memory module. Load reduced memory module technology uses a distributed data buffer to improve bandwidth efficiencies when scaling to higher capacities and speed on enterprise server systems. All LRDIMMs are registered but not all RDIMMs are LRDIMMs. LRDIMM or loadreduced DIMMs are used in enterprise servers support highest density modules and contain a memory buffer MB component usually made by IDT or Montage. The memory buffer minimizes the load on the server memory bus. LRDIMMs are commonly used to maximize HPE ProLiant DL360p G8. What is an unbuffered memory module. What HPE ProLiant DL360p Gen8 memory speed is supported. DDR31333, DDR31600 and DDR31866 Why may there be various speeds of HPE ProLiant DL360p G8 memory. Some servers often have various configurations and versions. If you are unsure what you need, please refer to your DL360p Gen8 manual or data sheet. If you need tech support, please contact us. General DIMM population guideline for HPE ProLiant DL360p Gen8 upgrade to consider. Some may or may not apply. Do not mix DIMM LRDIMM, RDIMM and UDIMM types. If mixing memory speeds, all 24 DIMMs run at the lowest DDR31333 bus frequency. Install DIMMs starting furthest from the processor. Do not install DIMMs if the corresponding processor is not installed.

If only one processor is installed in a two CPU system, only half of the DIMM slots are available. To maximize performance, balance the total memory capacity between all installed processors. It is not required, but it is recommended to load the channels similarly if possible. Why are there so many HPE ProLiant DL360p G8 upgrade options. IT buyers come from all walks of life. Some purchase by OEM part number. Some purchase by original module part number. Our goal is to give you confidence when purchasing HPE ProLiant DL360p Gen8 upgrades. All modules listed are qualified to work in your HPE ProLiant DL360p G8. Live Chat Have a question. Part Number or Product Description required Upload your list for us to quote. X A message to our customers We remain resolute in our obligation to support mission critical server and computing needs during the Covid 19 pandemic. Essential health care, government, military, financial, educational and small businesses have our support. We continue to deliver. IMPORTANT When installi ng the rack rails, be sure they are

oriented Front Left and Front Right, as indicated on the rails. This tool is available for assistance in installing the server into the rack. Refer to the tool part number when contacting your local service representative. Optional cable management arm Overview This rack hardware kit supports a variety of products in round, square, or threaded hole racks. Use the legend to identify installation steps appropriate to the type of rack.

Rack identification legend Round hole racks Square hole racks Threaded hole racks No tools required No tools required — Installing the rail kit into a rack WARNING To avoid risk of personal injury or damage to the equipment, do not stack anything on top of rail mounted equipment or use it as a work surface when extended from the rack. CAUTION Always plan the rack installation so that the heaviest item is on the bottom of the rack. Install the heaviest item first, and continue to populate the rack from the bottom to the top. WARNING To reduce the risk of personal injury or damage to the equipment, at least two people are required to lift the server during installation or removal. The only warranties for HP products and services are set forth in the express warranty statements accompanying such products and services. Nothing herein should be construed as constituting an additional warranty. HP shall not be liable for technical or editorial errors or omissions contained herein. Installation Instructions IMPORTANT When installing the rack rails, be sure they are oriented Front Left and Front Right, as indicated on the rails. Overview This rack hardware kit supports a variety of products in round, square, or threaded hole racks. The grounding plug is an important safety feature. Plug the power cord into a grounded earthed electrical outlet that is easily accessible at all times. Unplug the power cord from the power supply to disconnect power to the equipment. Do not route the power cord where it can be walked on or pinched by items placed against it. Part Number March 2012 Edition 1 The only warranties for HP products and services are set forth in the express warranty statements accompanying such products and services. Nothing herein should be construed as constituting an additional warranty. HP shall not be liable for technical or editorial errors or omissions contained herein. Microsoft and Windows are U.S.

registered trademarks of Microsoft Corporation. Bluetooth is a trademark owned by its proprietor and used by Hewlett-Packard Company under license. Intel and Xeon are trademarks or registered trademarks of Intel Corporation or its subsidiaries in the United States and other countries. The server provides enterprise-class design for performance workloads with versatile and future requirements, and it is ideal for performance-driven computing and storage in a dense rack package. The HP ProLiant DL360p Gen8 Server is a space-conscious, 2-processor performance server with industry-leading feature sets. It is built to protect your investment with reliability, accessibility, and serviceability features designed in. Introduction 7 The supported AMP modes use the letter assignments for population guidelines. Component identification 13. S7 Reserved S8 Reserved S9 Reserved S10 Reserved S11 Reserved S12 Reserved To access redundant ROM, set S1, S5, and S6 to on. When the system maintenance switch position 6 is set to the On position, the system is prepared to erase all system configuration settings from both CMOS and NVRAM. Be sure to properly configure the server or data loss could occur. NMI jumper The NMI jumper allows administrators to perform a memory dump before performing a hard reset. Crash dump analysis is an essential part of eliminating reliability problems, such as hangs or crashes in OSs, device drivers, and applications. Many crashes can freeze a system, requiring you to do a hard reset. Resetting the system erases any information that would support root cause analysis. Systems running Microsoft Windows experience a bluescreen trap when the OS crashes. When this happens, Microsoft recommends that system administrators perform an NMI event by temporarily shorting the NMI header with a jumper. The NMI event enables a hung system to become responsive again.

Component identification 14 The display provides status for all internal LEDs and enables diagnosis with the access panel installed. To view the LEDs, access the HP Systems Insight Display on page 21. Combinations of illuminated Systems Insight Display LEDs, the system power LED, and the health

LED indicate system status. Systems Insight Display LED and color Health LED System power LED Status Processor amber Red Amber One or more of the following conditions may exist Processor in socket X has failed. Processor X is not installed in the socket. Processor X is unsupported. ROM detects a failed processor during POST. Processor amber Amber Green Processor in socket X is in a prefailure condition. DIMM amber Red Green One or more DIMMs have failed. DIMM amber Amber Green DIMM in slot X is in a prefailure condition. Over temp amber Amber Green The Health Driver has detected a cautionary temperature level. Over temp amber Red Amber The server has detected a hardware critical temperature level. PCI riser amber Red Green The PCI riser cage is not seated properly. Fan amber Amber Green One fan has failed or has been removed. Fan amber Red Green Two or more fans have failed or been removed. Power supply amber Red Amber One or more of the following conditions may exist Only one power supply is installed and that power supply is in standby. Power supply fault System board fault Power supply amber Amber Green One or more of the following conditions may exist Redundant power supply is installed and only one power supply is functional. AC power cord is not plugged into redundant power supply. Redundant power supply fault Power supply mismatch at POST or power supply mismatch through hotplug addition Power cap off Amber Standby Power cap green Flashing green Waiting for power Power cap green Green Power is available. IMPORTANT If more than one DIMM slot LED is illuminated, further troubleshooting is required. Test each bank of DIMMs by removing all other DIMMs.

Isolate the failed DIMM by replacing each DIMM in a bank with a known working DIMM.

Component identification 16 Flashing blue The drive carrier firmware is being updated or requires an update. 2 Activity ring Rotating green Drive activity Off No drive activity 3 Do not remove Solid white Do not remove the drive. Removing the drive causes one or more of the logical drives to fail. Off Removing the drive does not cause a logical drive to fail. 4 Drive status Solid green The drive is a member of one or more logical drives. Component identification 17. The drive is a member of one or more logical drives and predicts the drive will fail. The drive is not configured and predicts the drive will fail. Solid amber Off The drive has failed. The drive is not configured by a RAID controller. Fan modules Oneprocessor configuration When only one processor is installed, be sure the fan blanks are always installed in bays 1 and 2 to ensure proper cooling. Twoprocessor configuration Component identification 18 When only one processor is installed, always install the fan blanks. Use the screwdriver to loosen screws or thumbscrews, as needed, during procedures. Component identification 19. Power down the server Before powering down the server for any upgrade or maintenance procedures, perform a backup of critical server data and programs. IMPORTANT When the server is in standby mode, auxiliary power is still being provided to the system. This method initiates a controlled shutdown of applications and the OS before the server enters standby mode. This method forces the server to enter standby mode without properly exiting applications and the OS. If an application stops responding, you can use this method to force a shutdown. Use a virtual power button selection through HP ilo. This method initiates a controlled remote shutdown of applications and the OS before the server enters standby mode.

Before proceeding, verify the server is in standby mode by observing that the system power LED is amber. Extend the server from the rack NOTE If the optional cable management arm option is installed, you can extend the server without powering down the server or disconnecting peripheral cables and power cords. These steps are only necessary with the standard cable management solution. 1. Power down the server on page 20. 2. Disconnect all peripheral cables and power cords. 3. Loosen the front panel thumbscrews. 4. Extend the server on the rack rails until the server railrelease latches engage. WARNING To reduce the risk of personal injury or equipment damage, be sure that the rack is adequately stabilized before extending a component from the rack. Operations 20 The sliding rails could pinch your fingers. 5. After performing the installation or maintenance procedure, slide the server into the rack a. Slide the server fully into the rack. b. Secure the server by tightening the thumbscrews. 6. Connect the peripheral cables and power cords.

Remove the server from the rack To remove the server from an HP, Compaq branded, telco, or thirdparty rack 1. Power down the server on page 20. 2. Extend the server from the rack on page 20. 3. Disconnect the cabling and remove the server from the rack. For more information, refer to the documentation that ships with the rack mounting option. 4. Place the server on a sturdy, level surface. Access the HP Systems Insight Display 1. Press and release the display. 2. Extend the display from the chassis. Operations 21 22 The display can be rotated up to 90 degrees. Remove the access panel WARNING To reduce the risk of personal injury from hot surfaces, allow the drives and the internal system components to cool before touching them. CAUTION Do not operate the server for long periods with the access panel open or removed. Operating the server in this manner results in improper airflow and improper cooling that can lead to thermal damage.

To remove the component 1. Power down the server on page 20. 2. Extend the server from the rack on page 20. 3. Open the locking latch, slide the access panel to the rear of the chassis, and remove the access panel. If the locking latch is locked use a T15 Torx screwdriver to unlock the latch. Install the access panel 1. Place the access panel on top of the server with the hood latch open. Allow the panel to extend past the rear of the server approximately 1.25 cm 0.5 in. 2. Push down on the hood latch. The access panel slides to a closed position. 3. Use the T15 Torx screwdriver provided with the server to tighten the security screw on the hood latch. Remove the FBWC capacitor pack 1. Power down the server on page 20. 2. Remove all power a. Disconnect each power cord from the power source. Operations 22 23 b. Disconnect each power cord from the server. 3. Extend the server from the rack on page 20. 4. Remove the access panel on page 22. 5. Disconnect the cable from the cache module or PCIe controller. 6. Remove the FBWC capacitor pack. Remove the PCI riser cage CAUTION To prevent damage to the server or expansion boards, power down the server and remove all AC power cords before removing or installing the PCI riser cage. 1. Power down the server on page 20. 2. Remove all power a. Disconnect each power cord from the power source. b. Disconnect each power cord from the server. 3. Extend the server from the rack on page 20. 4. Remove the access panel on page 22. 5. Remove the PCI riser cage a. Disconnect external cables connected to any existing expansion boards. b. Disengage the two PCI riser cage thumbscrews. Lift the tab, rotate 180 degrees, and the thumbscrew pops up. Operations 23 24 c. Lift the assembly to unseat the PCI riser boards, and then remove the cage. Install the PCI riser cage CAUTION To prevent damage to the server or expansion boards, power down the server and remove all AC power cords before removing or installing the PCI riser cage. 1.
