It is a good guess if this tank or some others are sold in small to medium.Not only will it drive traffic and leads through your content, but it will help show your expertise with your followers.By redirecting your social media traffic to your website, Scoop.it will also help you generate more qualified traffic and leads from your curation work.You can decide to make it visible only to you or to a restricted audience. Our suggestion engine uses more signals but entering a few keywords here will rapidly give you great content to curate. The item includes accessories found with the original product and may include a warranty. See the sellers listing for full details and description. Its dependable performance has been proven over and over again in automatic well testers, freewater knockouts, and electrostatic treaters. The electronic unit is integral with a retractable sensing element for simple insertion into existing block valves. Cote Shield electronics ensure repeatable level indication regardless of temperature or density changes. If process material stops flowing due to a plugged condition, the flush mounted capacitance sensing element will alarm, allowing further action to occur alerting an operator, shutting down a conveyor belt, etc.. One control point can be set up for differential measurement for pump control. This product is best suited to sump level control and batch processing. Allow machine to be crated if at all possible while storing for short or long term durations.Rotate shafts every two to three weeks to avoid flat spotting of the ball bearings.SYSTEM, please read and review the contents of this manual and become familiar with the procedures within. Thank you for your purchase and we look forward to serving you again inA high percentage of the accidents that occur are due to careless behavior or misuse of machinery. We ask you to be a careful operator and to properly service your machine. AIRLIFT SAFETY NOTE Airlifts are standard on all units with an end dump hopper. Before startup, remove the three 3 powerhead shipping spacers and discard. This is done byDo not put your hand in front of the intake nozzle while in operation. Do not put your face or any portion of head in front of the nozzle. Do not open control panel or remove any junction box cover while main power supply is live. Do not vacuum any flammable liquid. For mobile configurations, check that unit is properly stopped so unit will not tip or roll. Read all warning and instruction decals placed on the machine and its associated equipment. Allow only responsible, properly instructed individuals to operate the machine. Periodically check for any loose bolts or set screws. Be careful to avoid overhead electrical installations. Extreme caution should beWe ask you to be that type of operator.Both the LC and HC have twelve 12 filter bags.That being HC High Clearance or LC Low. Clearance. The LC designation is always tagged onto the end of the model number. The HC designation is almost always assumed and usually left off.The Powerhead and hopper are mounted in a support stand. Connected toBy carefully reading and following the instructions contained herein,A positive displacement pump is used to evacuate. Because there is a vacuum in the hopper, air entersIt is this air movement that conveys the material. The heart of the system is a positive displacement lobe vacuum pump blower.

It is driven by a coupler or aThe blower contains impeller lobes spinning in opposite directions and always in contact of each other and theIn order to prevent the material and the dust generated by this conveying procedure from being discharged intoBefore the air and material go into the blower

As well as protecting There is one stage of separation of the material and dust from the air before they get to the filter cartridges. As Any material left As the air passes through the filter cartridges, the dust is trapped on the outside of the cartridges. Every 10 to This pulse of air keeps the outside of There are several different types of material bins, all of which will eventually fill with material. When this In some cases, as with In this case In other cases, as with bottom dump hoppers, it may have a self In this situation, the unit will shut down momentarily, discharge the material, the gate Any thing from rotary feeders If you have any Powerhead. Once together, you can move the Be sure that the Airlift Caution Maximum air pressure should not exceed 120psi. Be sure to replace caps on guides and tighten down firmly. See item C. Note FAILURE TO DO SO COULD RESULT IN INJURY TO OPERATING PERSONNEL. This includes the vacuum pump oil levels Rear on all units and shaft end if so equipped. Level should be midway on site glass. If any, repair or replace. Note BE SURE TO DISCONNECT ALL POWER WHEN REPAIRING Correct this by first insuring that incoming power is disconnected, then rewire incoming service wire at the top of the circuit breaker. Note This will correct both the blower motor as well as the bag shaker motor. Check bag shaker timer setting as follows Verify that the shaker motor runs for at least 30 Additional shaking time is required to higher dust loads. Maximum shaking time is 60 seconds. Bag Shaker Motor Confirm that vacuum conveying hoses and fittings are connected and pick up nozzle is out of material so that the vacuum pump may "breathe freely" during startup. Note Note. Note.

For units supplied with the new Drexelbrook "The Point Series" Level Probe. During initial startup and after a loss of power, the operator must wait approx. 20 seconds to allow the probe to finish its calibration cycle. Control Power. Blower Start. The blower is turning in the correct rotation if the silencer exhaust cover lifts open and air is discharging from the silencer. F as shown on "Temperature Gauge" located on right side of control panel. Note When vacuum pump stops spinning and there is zero air flow, the bags will Note Never stop powerhead with "Control. Power" button. Always go through the above described stopping sequence. An LED on the Programmable Logic Controller located in the control panel, will light if any Please refer to the following LED's to find out why the unit has shut down. Shaker. Timer. Restart. Programmable Logic Controller The following inputs are "Blower Shutdown" signals. Material has passed through the filters and the broken bag detector has sensed it. Check filters immediately. Replace any filters that are torn. Make sure that all filters are being held tightly in place and that the dust cannot be allowed to pass around the filters. This button stops the blower. It is also used to reset a fault. The end dump hopper is full. Empty hopper. The level of the oil in the blower is too low. Check the level of Fill with oil per the instructions in the blower manual. Allow the unit to cool. Check for plugged lines. Allow the unit to pull in only air until the temperature has been reduced. The filter differential is measured in inches of water column. When the differential reaches 20" of water, the unit will shut down. The unit with then shake the bags. The following inputs are Amber pilot light on door. Blower Running. Energizes M1, Blower and green pilot light on door. End Dump Hopper Full. Red pilot light on door. Shaker Running. Energizes M2, Shaker motor. Dirty Bags Too Frequent.

Indicates that the blower has automatically shutdown four 4 times within 10 minutes because of dirty bags. Shut the power off and check for mechanical problems. Bottom Dump Restart Timer. There are two other LED's on the PLC which are for information purposes only. Start Button. This button starts the blower. No Air Flow Shaker Start. Allowing shaker to start. Self Dump Hopper Auto Restart. Permissive for bottom dump hopper. Low Blower Oil. No light on the front of the panel. High Blower Temperature. Thermal Protector. On large Primary electric motor units there is a thermal protector. This will reset automatically as electric motor cools. To restart the system, press the "Blower Do not use level switches to check oil level. Refer to the "servicing instruction Note If the blower has automatically shutdown four 4 times within 10 minutes because of dirty bags, the unit will initiate a "Lock Out Mode" and the blower will be prevented from starting. Turn the Main Power Disconnect to the "Off" position and check for mechanical problems. To restart the system The HEPA

filter option is designed to eliminate virtually any particulate from being discharged from the. Some equipment is designed with the HEPA filter on the discharge side of the vacuum pump such that allIn this design, allTypical filterMaintenanceTypically, this will be between 1" H₂O and 5" H₂O. MonitorWhen the differential reading increases by 5" H₂O or more from the originalProtection. There is a differential pressure switch located inside the control panel. At 5" H₂O above the originalThe filter must be replaced before restarting the unit.Material andThe vacuum is adjustable by means of the air bleedin the sleeveFor instance, replace hoses that areEliminate sudden kinks or sharp bendsSteaming may cause moisture to condense on the filterThis cake must the be manually removedRemove side access door and shaker door.Clevis Pin. Shaker bar. Shaker. Door. Side Access Door. Knocker. Assembly.

Shaker ShaftCompletely remove the shaker bar from the bottom of bags. This is done through the shaker access door.Completely remove the rubber ended knocker barThis is done through the large side access door. F. On the top of the machine, remove the end and middle bag retainer bars andEnd Retainer bars. Top Access to Filter Bags. Middle Retainer barsNOTE The first filter bag to be removed is either the one nearest or farthest from the vacuum pump.They should all have small holes through them. Check each bag cage for damage, broken bars, bent rods, etc.See "DUST PASSAGE FILTER CHANGING PROCEDURE" for details. Completely and thoroughly clean the filter bag mullion frame and dust passage filter area on top of the machine. This will prevent dust from reaching the vacuum pump and causing serious damage.Match the holes in the bottom of the filter bags with the pins on the bottom of the cages. IMPORTANT If a filter bag is damaged do not attempt to use it. It will leak and allow material to go to the vacuum pump. Serious damage to the vacuum pump can result from dust leaking through the filter bags.Serious damage to the vacuum pump can result from dust leaking through the filter bags.It will leak and allow material to go to the vacuum pump. Serious damage to the vacuum pump can result from dust leaking through the filter bags.Serious damage to the vacuum pump can result from dust leaking around the filter bags.If this is not done correctly, dust will leak around the filter bags. Serious damage to the vacuum pump can result from dust leaking around the filter bags.End Retainer bars. Middle Retainer barsSee "Dust Passage Filter Changing Procedures" for details. Replace the large top access door.Damaged gaskets can allow dust to leak into the clean side of the filter bags. This can cause serious damage to the vacuum pump. Make sure that shaker bar mounting pipe lines up with the shaker shaft.
