The easiest way is to navigate to your state's drivers licensing agency's website and view the handbook online. You can also download it so you have your own copy, or you can pick up a physical copy of a DMV handbook when you're at your licensing agency's office. Register a free business account Leva received a Masters of Arts degree in adult education at Ball State University in Muncie, Indiana. Darcie McGrath 2.0 out of 5 stars Drawing on a wealth of personal experience, Patricia Leva explains in clear, easy to read language the use of HemiSync technology. Included in the book are real life experiences of other travelers sharing their very interesting and inspiring stories. I highly recomend this book to any any person desiring to explore more deeply the possibilities inherent in HemiSync technologies.Patricia seems very New Age oriented and for some reason feels to need to provide analogous scientific support for mental structures and tools used at TMI.There is a completely irrelevant chapter on the history of Star Trek, plus the book is padded with lots of emails between HemiSync fans which are interesting, but should probably be left on a newsgroup server or web site rather than filling out the book.

There are some descriptions of the TMI work, but nothing I havent read elsewhere. If you are interested in the work of TMI then Bruce Moens books are a lot more readable.It clearly explains the different focus states, and how to achieve and recognize them. Ms. Leva uses very easy to understand metaphors, allowing folks not familiar with works from Oudspensky, Gurdjieff, Castaneda to become aware of these different levels of conciousness. The book is very well organized, printed on good quality paper, and will be a an asset to any readers library of literature

on Metaphysical exploration. Her life's experience of exploration is shared openly and concisely. The author brings a personal, lighthearted touch to a very serious subject. I particularly enjoyed her weaving of Star Trek, Georges Gurdjieff, and P.D. Ouspensky, into the topic of out of body travel. I found this book very valuable in helping clarify the different states of consciousness connected with the other side. It was well done, lucid and had a light touch. Revised in 2014, this 17 chapter manual includes full color photos and graphics and covers practically every situation a driver may face.

It poses potential driving scenarios and contains interactive lesson activities and chapter review questions. AAA's How to Drive student manual will help the novice driver learn the latest concepts in driver safety including managing visibility, time and space, distracted driving, driving under the influence of drugs and alcohol, new vehicle technologies and driving in adverse conditions. The How to Drive program is aligned with the ADTSEA curriculum and the student manual is the preferred textbook resource for the current 3.0 version. With that said there is room for improvement in the current edition. Chapter 11 Sharing the Road with other users, Chapter 12 The effects of Alcohol and other Drugs on Driving and Chapter 13 The effects of Distractions, Drowsiness and Emotions on Driving all have packed way too many topics in one chapter to cover them properly. Other chapters like Chapters 10 and 14 thru 17 should be the ones combined and allow for the instructor to devote more time to issues that will truly impact the students and other roadway users' future safety out on the roadway. Also the Instructor manual is bulky and does not hold up well under use and it would be far more beneficial to have an instructor edition textbook now that would be a GREAT improvement. But even so thank you AAA for a great product I am looking forward to your new edition and hoping you have addressed some of these concerns! I like the detailed explanation and the illustrations. Way worth the wait! Thank you! I wish the cover was a little thicker material, but that is not a major issue. I recommend this curriculum for anyone teaching a driver education course. I am pleased AAA has published a Spanish addition also. Thumbs up! Will be an asset to the curriculum. Shipment was very slow. The use of photographs, tables, and other graphics are eye-catching and informative. The student response from these textbooks has been great.

I have used another textbook used in Texas and this book is much more user friendly and is an effective teaching tool. Using the textbook and the video presentations really help students learn the

concepts. I'm going to try to have my school go to it. The information is well written, easily understandable and the illustrations are excellent. It's a great resource for new drivers. It is very comprehensive, user friendly and one of the best how to drive books out there. Also, we want to thank Zach for his personal service and attention to detail with our orders! This information is right on for them to be able to use in their daily driving. Not only is it current but every chapter brings out the lesson like no other textbook out there. Responsible Driving is out dated and poorly done and Drive Right does not compare to it. AAA has put together a curriculum that is second to none. My only complaint would be the PowerPoint they provide does not have the HTD videos integrated and the graphics from the book are not available to customize the presentation. But you will find no better text out there for your students. Check it out you will be impressed. However, please note, the results of these studies, which are numerous, are considered "anecdotal" and you must agree to perform your own due diligence and gain an understanding of tDCS before using. As new tDCS applications are actively studied in the academic and scientific circles, additional montages are posted with their respective results. Detailed Steps Use one pair at a time and keep the second pair for future use. Preferably lukewarm temperature. Stir gently until the salt granules have dissolved into the water. Remove the electrodes and place them on their support in the original packaging. If this happens frequently, make sure that you have parted any hair that may be interfering with the spongeto skin contact. The headband must be used in order to apply the correct amount of pressure on the electrodes.

The device will shut off power down automatically if in pause mode for 2 minutes. The range is between 0.5mA to 2.0mA. When the battery indicator on the screen displays 1 bar, the battery should be replaced. Use of other types of batteries will cause damage to the device and void the warranty. Used batteries should be disposed of properly, in accordance with local environmental laws. The use of tDCS in pregnant women, children and those with implanted medical devices of any kind for example, including but not limited to; pacemakers, nerve stimulators, etc. is not recommended.
