Con los ultimos avances en los algoritmos AutoEQ y AFS propietarios de dbx, canales de entrada adicionales, control de Ethernet a traves de un dispositivo Android, iOS, Mac o Windows y asistentes actualizados, DriveRack VENU360 continua el legado de DriveRack de procesadores de gestion de

altavoces de gran sonido, potentes y asequibles, para una nueva generacion. La aplicacion te permite manipular directamente el Compresor, EQ Grafico, EQ Parametrico, Ajustes Crossover, Perfiles de altavoz y mucho mas con su atractiva interfaz grafica de usuario facil de usar. Los LED en la parte superior de los medidores de entrada muestran el recorte de entrada. Los LED en la parte superior de los medidores de salida muestran la actividad del limitador. Botones de silencio proporcionados para cada entrada y salida. El VENU360 cuenta con funciones de asistente para asistencia de nivel, ecualizacion automatica, supresion de comentarios AFS, ajustes de altavoces y amplificadores, y muchos mas. No es necesario ser un profesional experimentado para obtener un sonido excelente desde cualquier habitacion. Nombre del patron Procesador Nombre del patron Procesador Haz clic aqui para hacer una solicitud de servicio al cliente. Para calcular la calificacion general por estrellas y el desglose porcentual por estrellas, no usamos un promedio simple. Nuestro sistema toma en cuenta cosas como lo reciente que es una calificacion y si el revisor compro el producto en Amazon. Tambien analiza las calificaciones para verificar su fiabilidad. Vuelva a intentarlo en otro momento. The auto EQ does a decent job but does require further finetuning once applied. Luckily there is a builtin RTA, a graphic EQ, and parametric EQ which you can run in addition to auto EQ. So theres an electronic crossover, 3 EQs all in one small package. Theres also subharmonic synth, compressor, limiter which I dont use since my setup is home hifi, not live sound but nice those options are available.

After doing the auto EQ, I then learned I could biamp my speakers with Venu360. Now I can control the bass on my NHT Classic 4 speakers desperately. This venu360 has big advantages over something like a MiniDSP because you need NO SOFTWARE REQUIRED TO CONTROL IT. We use computers enough in our daytoday lives. Suffice it to say however, the 260 model came highly recommended by a friend who does huge stage setups. Im brand new to the DriveRack system, so this was a new experience for me, going from a rack full of gear to a single 1u device. I started my introduction with the PA2 model, and immediately found a HUGE flaw in the circuit design that caused me to return it immediately. Upon inquiry, my buddy also informed me that he knew about that flaw and that is one reason he did not use the PA series. So, I tried the 260, the one he recommended. I love it. Its super easy to set up, does a huge pile of magic, and once its all set up, it just works like a champ. So. if youre new to Drive Rack and not sure if this thing is for you, or if youre ready to step up to digital processing, give this one a try. Youll be up and running in less than 15 minutes. Im kind of amazed how this one little box can be so quick to set up for my small rig, and still be fully functional for my buddy who does huge shows of 330k attendance. I have not yet had a chance to play with the WIZARD mode using the RTA Mic. Next time I set up a production stage, Im going to give that a try. This has really added value to our service at church. The quality and balance of the band has drastically improved and the clarity of the spoken word is a lot better than the basic equalizer we were using. It has a lot of features, most of which we arent using, but I have been implementing some as I learn how they work. Be warned that this is a quite advanced piece of technology and isnt something most people off the street can just set up and use.

I was originally going to purchase this through Sweetwater but found a better price on here with 2day shipping. We have installed it in our new system and could not be more satisfied. All in one single component. Save space and connecting troubles with other processors. Very easy to manage and delivers excellent quality. The compressor is good and delivers what is needed. Very good solution and an affordable price. If you want sound quality that stands out this is what you need. busqueda de nuevo. The dbx exclusive Set Up Wizards walk you through system set up with easy to follow stepbystep instructions. Finish up by using the AFS Wizard, which automatically sets filters to eliminate any feedback during performances. Within minutes, your system will sound like it was tuned by a pro. No experience required. Para calcular la calificacion general por estrellas y el desglose porcentual por estrellas, no usamos un promedio simple. Nuestro sistema toma en cuenta cosas como lo reciente que es una calificacion y si el revisor compro el producto en Amazon. Tambien analiza las calificaciones para verificar su fiabilidad. Vuelva a intentarlo en otro momento. This does that and does it so much better. You can configure so much more just on the crossover itself, each band low mid or high can be set up with its own frequency range regardless of the others.

But, the kicker is that this also has a built in 31band graphic eq, a couple parametric eqs for the different outputs, a compressor, limiter for each output, feedback destroyer, subharmonic synthesizer. So you are getting a rack full of equipment into one piece. And the most important of all, it has an autoeq feature that can automatically tune the eq so that your speakers sound flat across their whole range. This just makes any speaker sound so much better because it compensates for those areas where the speakers cant keep up or they overdo it. It also compensates very well for the crossover gaps or peaks. Now to the bad the navigation is really cumbersome. In some situations you have to push the same button twice to get to some more items, in others you have to press the utility button to see more, and then theres the scroll wheel as well. So in some instances it gets weird finding your way around. Also, the parametric equalizers on this are 5, which is great, however they are split as 1 for low output, 2 for mid output and 2 for hi output. I really wish there were 5 that could be used before the crossover. Im not saying they wont work as they are but its just another cumbersome deal. Also, dont forget that you need to buy the DBX RTA mic in order to use the auto calibration feature. The Apex 220 RTA mic does exactly the same job at about half the price for the same quality. The PA2 pretty much fixes all the issues i mentioned above and its just a much more refined product. Bottom line is, if youre on a budget get this with the apex 220 mic, otherwise get the PA2. The prissy ones would choose a 260 over this, but this is more than enough for the intermediate user. Whatever, it works. I just wont trust my seller. However, once I purchased my subs, I connected them to my 515XT outs and ran them through the EP4000 with no additional crossover.

The EP4000 does have sub settings which worked okay, but when I started turning the volume up the subs were carrying way to much vocal and that signal started to wash out the lows, to the point where it made the setup sound very flat. This is no good when you really crank the volume as the subs start to peak while your tops are still working up the power curve. Overall, the sound was only good if I had a wide open venue to play. I still cant believe that quality coming out of my speakers, its like I have a brand new system. It will make it sound like a truly professional gig and your audience will love you for it! 2 2 Customers 2 customers have given this product a 2star rating. Of these, 2 customers have written no texts or given their feedback in another language. 1 1 Customer One customer has rated this product with one star. The candidates Behringer DCX2496, Digisynthetic DS24, Phonic i2600, dbx DriveRack PA2 and finally the t.racks DSPs. After reading ALL the specifications and reviews I could find for each unit, here is a short summary Behringer DCX2496 best for prolevel sound systems, where delay lines are a must. Has the most features out of all candidates, but the old remote software and old RS232 connection are a nightmare to set up you need an USB modem and not all of them will work. Also, reports of crackling sound and bad ribbon cables inside, along with hum on the signal make it a gamble I was not willing to take. A 3band PEQ at input and 5band at output, a limiter, free routing for each output A, B or SUM really all I needed. But then I tried the remote software. Buggy, with the graphs for crossover and EQ not working, limiter settings were completely invisible behind a graphics glitch absolutely useless and out of the question. Phonic i2600 it is a step down from the DCX2496 in terms of features, lacking in PEQ bands and having one less input channel. It does two things better than the Behringer the RTA functionality to automatically measure and set up your sound system and its got a subharmonic synth for extra bass response. That didnt make sense, because its got 2 more outputs than the former model. Then I read the manual. Pass! dbx DriveRack PA2. saving the best for last. First off, the negatives 35% more expensive than the DCX2496. But from here on, it starts to catch up a LAN remote control through a router even a WiFi one!, snappy modern software, smooth playback while you change settings live the Behringer actually cuts out playback at some setting changes!.

Then, we move on to the full 31band stereo graphic equalizer, the subharmonic processor, a complete feedback destroyer, the RTA wizard, along with pink noise and white noise generators all of which dont exist on the DCX2496 and now I saw its price tag as very justified. Then, there is the full filter set on the crossover, 8band PEQs on the output stages, a really good limiter and to top it all off a comprehensive list of presets for different brands of speakers, amplifiers, plus a vivid software that makes setup easy and fun. This means, if you want to connect your PC, phone or home audio to it, go right ahead no external DI box needed, more cash saved. Eliminates ground hum noise at the touch of a button. 2. Sound Quality my ears are happy and so are all other buyers, from the reviews Ive read across the net. 3. Reliability again, based on all the reviews, this unit will perform a long time, especially if you take good care of it and dont block its heat vents. I hope someone finds this review useful. As they say in German, Klare Kaufempfehlung for the DBX DriveRack PA2 from me. Send report Total handling features sound quality One of The Tools to make your speakers play nice with each other! Archyx, 22.03.2020 This is what makes my speakers play nice at home, and someone elses speakers play nice elsewhere when setting up PA in smallish venues. If you bother learning some of the science behind what this device is for, itll pay you back in sound quality. The best results are achieved when you have multiple amplifiers and speakers to be driven and spend the extra time to configure the crossover and phase alignment delays before AutoEQing. Also, as usual for dbx rack gear, this one lacks a power switch as well. I suggest reading the manual to find out more about the features. Yes, RTFM before buying! Some special cases will need a bit more manual tinkering, eg. And then it also found use where its at its best, smaller scale live sound reinforcement.

So far the PA2 firmware version 1.2.0.1 has locked up only when starting some Wizard features. External app connections will drop when this happens. This eats one of the quality stars, because setting up is one of the times when you want your tools to work. However, its never done anything stupid after setting up and in production use, so Ill live with the occasional Wizard crash. The Mac software interface follows the layout of the iOS app and is slightly less responsive but does work.

The iOS app has proved to be useful to tweak EQ, compressor, and such on the fly while the rack unit itself is somewhere out of reach. Later on I tried biamping a pair of passive speakers that offered the option. I set up the crossover with the speaker specs and finetuned it by ear, then used the output delay to phase match the tweeters with the full range drivers before AutoEQing. The improved clarity around the crossover range just. I dont have words for it. Lets say it just made an already great pair of speakers sound even better, and theres no going back to a singleamp setup. The AutoEQ has proved to be great to set the baseline EQ for whatever acoustics the venue happens to have. Sometimes the larger corrections need to be dialed back a little by hand, but thats never been much of a hassle compared to doing the whole EQ setup from scratch. The apps offer you a calculated dynamically updating frequency response result graph when doing AutoEQ fine tunes by hand. The graphic EQ isnt used much by me, but I sometimes use it to make small fine tunes at select troublesome frequencies that resonate in some particular spots of a venue. Configuring which outputs are enabled can only be done through the Wizard, which takes away half of the handling stars. When setting up special setups you will need to think which wizard choices enable what you need and then set up the crossover manually. Id prefer a possibility to just enable and configure each output freely instead.

When doing output phase matching, Ive used my iPhone and iPad at the same time because the phase inversion button and the alignment delay slider arent on the same view in the app. This chews another half of a handling star since access to both are often needed at the same time. At the front panel this works fine as switching back and forth between the preselected settings happens with separate buttons, but you most likely dont have your PA2 installed in the middle of the venue at the sweet spot where you listen while setting up. I have also used the PA2s RTA to set up separate EQs, eg. Just play pink noise through the system youre tuning and use the PA2s analyser to measure the frequency response, just like it used to be done before fancy AutoEQs. This method also works while setting up the crossover to make sure you have an even response around the crossover frequencies. PA2 has a noise generator for this purpose. The compressor is a nice touch in this thing. So far I havent needed it to make the PA louder, but Ive used it a lot as a soft limiter with 2.41 ratio and the OverEasy setting around 46, just to keep peak volume in control when playing loud. The feedback suppressor has been a great trouble solver for what little use Ive had for it. The subharmonic synth has been mostly useless for me. I havent really used the output side parametric EQs but Ive thought of a situation where Id use the PA2 as a splitter and AutoEQ each output pair separately as needed, then manually transfer the AutoEQ settings to the output PEQs. I havent used the limiters yet as the amplifiers and active speakers Ive used have had them built in, but Im sure a properly tuned PA2 would do limiting better and more transparently as well. Send report Total handling features sound quality Wish Id bought it earlier! Richard F. 40, 03.01.2018 I had been considering the Behringer DCX2496 Ultradrive Pro, because of the third input, but very glad I chose the DBX PA2 instead.

I had a really weird problem with my sound system. One of the radio mics started to ring slightly so I turned the gain down. I replaced both with a DBX DriveRack PA2 DBX DriveRack PA2 and DBX DriveRack RTAM mic to go with it DBX DriveRack RTAM . Yesterday a friend helped me take the system with the new DBX digital crossover and equaliser to his warehouse for testing pictures below. I had been hoping to do some other housekeeping some new connectors to simplify wiring with the money in 2017 for the sound system, but the new DBX unit is fantastic. It is quicker and easier to setup. I used to have use a Phonic PAA Phonic PAA3 and send pink noise through the system then manually set 64 faders to the correct settings. This was a pain. Pink noise isnt pleasant to hear, especially as there are often many other people in the venue while Im setting up. The DBX PA2 uses sweep tones and not only is it quick and easy the sound is a lot more pleasant. You can also take readings from multiple places to correct for acoustics better. It is also controlled by an app iOS and Android and will make my job doing sound for events a whole lot easier. The app walks you through all the settings with wizards it already knew the Behringer speakers I use so I just selected

them from the list, but not the Behringer amplifiers. The wizards are powerful and will help make setup a lot quicker. One thing I liked was the fact you can make changes on the fly without any glitches, noises etc, so if you want to change eq mid show that's no problem. Having the system set up in a warehouse away from everyone I could test every setting. The limiters are designed to stop clipping on the amplifiers, and although I use compressors on all the vocal mics to make the mix more solid having catch all limiters set on the output will be helpful. The subharmonic enhancer worked well, producing a warmth to the sound that I liked. Cons No third input is the only con I can see so far.

Send report Total handling features sound quality Mr. Wallace, 19.12.2019 Perfect sound for my system. Send report Read all 95 reviews Rate product VAT Dispatch expected by Wed, 23.
