The MAN Driver app assists truck drivers with functions such as the digital predeparture check, the MAN dealership search and quick guides for switches and check lamps in the truck via a scanning function. It also offers important features in the event of a breakdown. The fleet manager can view this data accordingly and transmit it digitally to the MAN service outlet selected in MAN ServiceCare. This mobile app is recommended for MAN truck drivers, not for MAN TGE, bus and NEOPLAN drivers. This saves a lot of time and the next workshop visit can be optimally adapted to the route planning. In the event of a breakdown, he or she can use the app to initiate the MAN Mobile24 roadside assistance and learn via status updates as to when roadside assistance will arrive on site. For the damage reporting data to be transmitted to the fleet manager, the fleet manager must register via the Marketplace. In addition, the fleet manager must invite the driver via the user administration. After the driver has accepted the invitation, the fleet manager can see an overview of the results of the predeparture check via the RIO platform predeparture check application and download it as a PDF document. To make the detailed view of the damage report available to the fleet manager and to release the information to the preferred MAN service outlet, the "MAN ServiceCare" service only available in selected countries must be booked in addition via the Marketplace. This requires the vehicle to be equipped with a RIO box onboard telematics module 3.

Data protection Terms of use Then select the "MAN Driver" app from the list. Click on the "Install" button to download and install the app on your smartphone. The standard fees of your mobile phone provider apply when calling Mobile24 and using mobile internet. An overview of the predeparture checks of all invited and loggedin drivers is shown in the "Predeparture check" application and can be downloaded as a PDF document. You can view the detailed results of the damage in the "MAN ServiceCare" application. In addition, the fleet manager must commission the preferred MAN service outlet in the "MAN ServiceCare" application if MAN ServiceCare is available in your country. This allows for optimised and proactive maintenance and repair management. The detailed results of the damage reports cannot be forwarded to the fleet manager or preferred MAN service outlet

without "MAN ServiceCare". If you have previously registered a vehicle in the app, the VIN appears automatically in the form. After opening, your location is automatically detected. For this to work, your smartphone's location services must be enabled. Pressing the button "Call Mobile24" launches the phone function with the Mobile24 phone number and you can initiate the call. This means that only licensed roadside assistance services are allowed to provide support or tow vehicles on these routes. However, MAN Mobile24 will still actively support you in this case. We will contact the respective roadside assistance service and make sure that your vehicle is taken to the nearest MAN dealership. As a convenient additional function, the text in the app can be read out loud to you. Find the button "Read out loud function". If this button is activated, the notes in the Quick Guide are automatically read out loud. Other types, such as the TGS, will be added to the app in form of expansions later on.

the older versions. Thus, in many cases we end up with improper drivers and have to find best driver updaters and install them on our own. So we decided to collect tips on how to update drivers for all most frequently sought after occasions. Often though, this proves to be problematic and you need to research ways to do it. Let's look at a few general ways to update drivers first, and then review specific types, such as video drivers, USB drivers, Realtek drivers, and more. In Windows, we need to navigate to Device Manager for this. There are several ways to open it in Windows 7, 8, 8.1 and 10 There navigate to the Details tab and select Hardware Ids in Property. You may copy the value field to clipboard and search the driver that way. As you unpack the archive, installation process will start automatically. Select "NVIDIA Graphics Driver" option, click Agree and Continue. Choose Express or Custom mode, according to your preference. While you wait, screen flickering may occur, but do not panic, it's a common thing. Some of those even have scanning capability to detect connected devices and offer compatible drivers. Most software vendors issue new versions with improvements or bug fixes, so generally this is useful.

Then rightclick on PC icon and select Device installation setting, see if it is checked as Yes recommended. If not, just select it and Save. Note, that when some drivers are being installed, it takes time, yet it is happening in the background. Let's take IObit Driver Booster as example. As you run it for the first time, the program scans your hardware for a couple of minutes, and offers to install or update specific drivers it deems necessary. Typically, we have a choice whether to install all or just the ones we want. Surely, it also may happen that you get an unstable or outdated driver. Then the only way is manual installation, so let's highlight several widespread scenarios in the upcoming chapters. Those are particularly good in detecting video drivers that require an update and finding relevant versions. Reboot afterwards. Enter your video driver parameters, find it and click Download. As it unpacks and installation begins, select NVIDIA Graphics Driver and then Agree button. Choose Express installation to save time, or Custom mode with a choice of components, click Next. The model is always indicated on a motherboard itself.To date, Windows is compatible with almost all USB 2.0 drivers, while for Windows 7 one might have to get USB 3.0 or higher. If a USB driver is missing, the system will display "Unknown device" alert. Consequently, when searching on the manufacturer's website, you may not find the USB driver. In such case, the easiest option is to apply a driver updater program, or download the chipset driver. One more tip is visiting usb.org, where huge amount of information is stored. Then go to Realtek.com, find the Downloads section, select the category, find a driver by model and install it. Without those, a user cannot connect to the Internet or to a local network, and

Bluetooth and WiFi also won't work. So first, check the network adapter in Device Manager. Then a CD or a flash drive that comes with hardware suddenly becomes relevant again. But jokes aside, you'll have to find another device to go online and find the latest version of a network driver. Install it and reboot.
