amp into a pair of JBL 4410 monitors. I make use of the onboard DAC for this which is great. Proper amp with loads of current reserve which means great all round sound. Weighs a ton! Reviewed Jun 26th, 2019 by catbus For its age, its an excellent receiver. Weighs a ton and reminds my of the 70s monsters. I had to resolder the VFD to get the display to work but other than that, no issues. The amp section is outstanding and outpaces the preamp. I have access to an Audio Precision and get 119dB of dynamic range, 0.<http://cuanhavesinh.com/userfiles/d-copia-20w-manual.xml>

003% THD, 1dB at 100kHz using just the amp at full output. Still very respectable. I may have to look for analog preamp section mods to improve that. ProjektRajz link I have a Yamaha CDX590 CD player and it skips on some CDs original CDs, these CDs play without problems on my other CD players. I have changed the laser unit KSS210A but this didnt solve the problem. When I turn the player upside down, it plays the problematic CDs without a problem. Thats why I think the laser needs adjustment. Here is a picture of the PCB.It didnt help.

Mode 1 only a short blink of two horizontal dashes on the display and thats it. Mode 3 seems to be very short as mode 1. I think Im missing something. Maybe someone did this or even serviced Yamahas in an official service and can provide information how to adjust the laser Or maybe the problem is not the laser. Similar manuals You can write in English language into the forum not only in Hungarian. Select the position whose requirements your speaker system meets.This adjustment is effective only when the Dolby Digital AC3 is decoded. MAX "Dynamic range" is the difference between the maximum level and the minimum level of sounds. This is ideal for reproducing church music played by a pipe organ etc. It precisely reproduces the source sound in detail, giving both the video and the sound field incredible reality. In order to explain the impressive functions of the DSP, we need to first understand what a sound field really is. LIVENESS How it Affects the Sound This parameter changes the apparent reflectivity of the walls in the hall. The larger the value, the later the reverberation sound will begin. The remote control transmitter does not function properly. A percussive noise is heard when you begin playing back a source encoded with the DTS. Please note that the cover of the remote does not stay on. Overall the amp is in great condition. Has a few small signs of wear here and there so please see pictures for details on condition. The item as described in the listing. I do not do advanced electrical testing of the internals so I can not. Much of my inventory is unrestored vintage. Electronics that are 2050 years old. I stand behind eBays policies 100% so please shop with confidence. Please view the estimated arrival date for details. As the flagship of Yamahas line of hometheater products, the DSPA1 seemingly has every useful feature imaginable in a topflight integrated amplifier, not the least of which are the most advanced versions of Yamahas Digital Sound Field and Cinema DSP processing as well as full Dolby Digital, Dolby Pro Logic, and DTS multichannel decoding. I found the DSPA1 a worthy successor to the groundbreaking Yamaha DSP1, which introduced Digital Sound Field processing back in 1986.In fact, the DSPA1 has way too many features to mention here, much less discuss thoroughly. By far the most important features are the amplifiers digital signal processing DSP facilities. Ill call this processing ambience enhancement. The DSPA1 has thirtyone such processing modes, which Yamaha calls Sound Field modes when they are intended for music and Cinema DSP modes when they are meant for movie soundtracks. For videooriented programming there are four Concert Video modes, two TV Theater modes, and four Movie Theater modes.Feel free to experiment.

If you dont find a mode you like immediately, all of them have adjustable parameters reverberation time, apparent room size, and the like. With tinkering you can pretty well optimize at least one mode for every piece of program material. Ideally, the effect speakers are placed, in order of importance, further apart, higher up, and farther away from the listener than the main front stereo pair. Although the DSPA1 can be switched to feed the fronteffect signals through the main front speakers in systems without the extra two speakers, the quality of the ambience in sevenspeaker operation is

greatly superior. The fronteffect speakers dont have to be large, or even very good, so every effort should be made to include them in any system based on the DSPA1. Yamaha intends the equalizers for matching speaker sound quality, a laudable goal. But without a lot of tiresome experimentation it would be difficult for most users to do speaker matching, which really needs test instruments and test signals, and its easy to totally screw up the sound in the process. Id use these facilities, sparingly, only as glorified tone controls. Another set of jacks is provided as an External Decoder input, in case another 5.1 channel system beyond Dolby Digital and DTS is developed heaven forbid. Theres an RF AC3 input for receiving Dolby Digital signals from a suitably equipped laserdisc player, three coaxial digital inputs and five optical digital inputs. Yet another deluxe item, an optical digital output, can feed a digital recorder DAT or MiniDisc. All of the speaker connectors are multiway binding posts spaced to accept dual banana plugs. There are provisions neither for secondroom operation nor for connecting a second pair of stereo speakers. Many of them are used to control external components via memorization of the infrared commands of other remotes. The DSPA1 is rated to deliver 110 watts per channel into 8ohm loads to the five main channels and 35 watts to each of the fronteffect channels.

There is no mention on the spec sheet as to whether these figures are for maximum output from all channels simultaneously or in some other combination. Not to worry. Our tests showed that the DSPA1 is capable of delivering all the power a typical hometheater enthusiast might need. All the numbers range from very good to superb. Both Dolby Digital and DTS decoding tested essentially the same the DTS tests were limited by the lack of suitable test signals. Of particular interest to me are the low noise levels. In listening tests at normal to loud volume settings, the amplifiers own noise was never a limiting factor in the dynamic range, which could be startlingly wide with some classical solopiano and symphonic music. Use your subwoofers own level control to balance the bass output. Thats because the frontpanel messages allow both setup and inuse adjustments without turning on a video monitor, a boon in adjusting the DSP features while listening to music. Depending on the program material, what I heard was either stupendously realistic or annoyingly gimmicky. Even the advanced processing of the DSPA1 has not changed my opinion, which is based on the fact that multichannel soundtracks already carry the ambience effects intended by the filmmaker. Any added ambience, even when its as well done as the DSPA1s, stands a good chance of degrading a films dramatic effect, if not the sound quality per se. In an excerpt from Dragonheart contained on a demo DVD promoting DTS, theres a scene in which the dragon, with the unlikely dubbedin voice of Sean Connery, flies from side to side in the picture while speaking. But whenever the dragon flew off to one side of the picture, his voice became much more reverberant as if the dragon had flown into, well, a movie theater. In a real movie theater, all of the loudspeakers are subjected to the same ambience, and there is no extra reverberation for sidepanned voices or sound effects.

But Yamaha cannot do that here because, as Ive pointed out in reviews of other DSP components, adding ambience reflections to the center channel reduces the intelligibility of speech, whether of people or dragons. An important aspect of the cinematic style of Dr. Strangelove is the variation of sonic environments contained in the soundtrack itself. The acoustically claustrophobic interior of the B52 bomber contrasts greatly with the echochamber ambience of the ironically named War Room. These differences are reduced and smoothed over by the addition of any DSP ambience effect, even the DSPA1s Mono Movie mode. The vividness of the sonic storytelling suffered, and the same thing occurred in at least one scene of every movie I played using a Cinema DSP mode. But who wants to select a different DSP setting for every scene change. With some movies youd have to make an adjustment every couple of seconds. So while I imagine that a wellconducted showroom demo of Cinema DSP could be an absolute knockout, with the movie excerpts cannily chosen to avoid the reverberantdragon syndrome, once you get the amplifier home youll eventually find such processing largely superfluous, as I did. With most films I was perfectly satisfied, and often bowled over, by the unenhanced but nonetheless often spectacular sound quality of DSPA1s outstandingly clean and

accurate Dolby Digital, Pro Logic, and DTS decoding. Bigband jazz sounded great in Concert Hall A, as did acoustical folkrock Joan Baez in a Jazz Club.
