Is it cheap Sure it is, in both common senses of the word. But is it worth every penny of its rockbottom price Again Yes. A couple times over. The special sparklyflake tape included is nice for this purpose, but it is not strictly necessary; I got equivalent readings using common aluminum foil tape and plain white grip tape. In many cases, in fact, the tape was not necessary at all. To measure the speed of a fan, for instance, it was sufficient to simply point the meter at the spinning blades, take a reading, and divide by the number of blades. It also includes a memory function button that

cycles through minimum, maximum, and last available readings from the last sampling period. But for this kind of relative comparison based testing, this little unit is a value that's hard to beat. Personally I did move one step further and created one small patent, that is this reusable Velcro collar with the needed reflective adhesive tape on it. This simple idea saves you from wasting reflective tape in to some extent. The test bed is my high quality turntable, which has speed control by PLL and also is direct drive no belts in it. The results are more than perfect. The specific digital tachometer it can perform a measurement from the distance of 20mm up to 50 Centimeter away. In my tests it managed to measure even from 2 meters away !! The 45 RPM is a

round number and so what set is what you get. Additionally you can download the attached specifications PDF. All true about what this tool can do. But what I also like, is that you have a large safe distance, about making the measurement by be far and away of possibly dangerous moving parts.
