If your Duo cruiser has the spring hitch a short 1.5 to 2 inch long spring mounted horizontally in the frame just behind where it connects to the bike then this is an easy fix. There are three parts needed. First looks something like a figure 8 with one large and one small hole. The second is a latch pin that goes through the first. The third is a washer with some tabs on one side. If you have these things then you have all the parts if not call the InStep customer service line 800 2426110 Monday Friday, 8am to 5pm Central Standard Time And ask for the SA074 coupler. If you do not have the spring hitch I think they have a different coupler but am not sure as mine has the spring hitch. As for the installation just go to the InStep website and look up the owners manual for any of the older double bike trailers. Hope this helps! P.s. The coupler is back ordered until approximately June 28 but can be pre ordered I am currently waiting for mine! Login to post Box contains no assembly instructions. Where can such instructions be obtained Here is a link to Bike assembly from them. Your specific bike is listed under cruisers. Make sure that you use metric wrenches because all bikes are metric. If, you bought from a bike shop, they will help you with what is needed. The manual I received. If your Duo cruiser has the spring hitch a short 1.5 to 2 inch long spring mounted horizontally in the frame just behind where it connects to the bike then this is an easy fix. Hope this helps!

The sling seat holds 1 or 2 children with a combined weight of up to 100 lbs., and the trailer includes a removable bar with 2 toy steering wheels. Rain and windshields and 5point safety harness belts provide comfort and safety, while full ball bearing pneumatic tires and a swivel front wheel keep the ride smooth. Features durable contoured poly shell, rear storage bag and quick folding for easy storage. To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Rush 5.0 out of 5 stars It is better than a bike seat because this does not tip over and the kids ride together and can have their snacks and juice. It hooks up and unhooks so easily from the bike. There is a safety tether at the hinge also, I guess in case the thing accidentally detaches you have a backup. <http://micronetglobal.com/userfiles/dcode-biorad-manual.xml>

I find only 2 problems no padding in the seat only a canvas sling seat and no helmet pocket meaning that when the kids have their bike helmets on, their heads are slightly tipped forward because bike helmets tend to be bulky at the back of the head. They cannot lean their heads completely back in the seat. They don't seem to mind too much because they are so excited about going fast, faster, fastest!! behind daddy's bike. It is very roomy as you could fit two children inside, so it makes a lot of room for just her. It had all the features I was looking for such as pockets inside to hold items and weather proof in case we get caught in the rain. It is very easy to attach to my bike. I love it and would recommend it to others. The only slight complaint I have is the seat is not that cushy however that is such a minor complaint don't let that stop you from buying one. I walk three of my five children to school every day, for a grand total of four trips a day drop off, pick up, drop off, pick up. I thought it would be a great idea to ride a bike instead, and I was right. I recently had a baby and it's great exercise. The kids have a blast pretending to drive to school. Their friends all think it's supercool, and they are the envy of their Kindergarten and Preschool classes. The smaller pieces hold down knobs break and the wider seat webbing disintegrates leaving black dust all over the rider's clothes. What's left is loose tangled individual strings instead of a strap. The straps must all be replaced. With over 20 years experience in building products for the outdoors, this has given us an unequalled reputation for quality. Stay as long as you want. Whether I barreled down the side street to the New York Public Library at a noisy, raging 12 mph, sending jaywalking pedestrians scattering, or went deep into the Back of Beyond, that car was utterly dependable, and I wish I still had it. This descendant of my beloved Landcruiser is just that. As I said, it looks nothing like its forebearer; in fact, one 2020 is probably equal in square foot space as two 1974's. The 2020 gives a smooth ride, easy handling, and is engaged in low 4 and high 4 4WD at the twist of a knob. My old car You had to get out, manually turn the wheel hubs, get in, and engage with a gearshift that stuck so hard you had to throw your entire weight behind it. The 2020 has a smooth suspension. My 1974 had no suspension, I mean it. Let's compare the safety features of the 1974 vs the 2020. Easy. The 1974 had none. How about the sound system of the vintage Land Cruiser as compared to the 2020's symphonic acoustics. If you were lucky. Given that clunky, all-steel 1974 Toyota Landcruiser that I drove for 20 years and the opportunity to have one of these "gets you anywhere", purely comfortable, beautifully designed 2020 models, which would I choose? What a great lead in to my own review of the 2020 Land Cruiser. I would like to tell you that it's in our garage, but truth is, it didn't fit in our garage.

With that wonderful, all-purpose, storage rack on top of the Land Cruiser, it was just too tall to pull into our garage. Now that, my friend, is a big vehicle. But there was a time when the three words, Toyota Land Cruiser, were spoken as if it were one long word. They were just all used together. It'll get you where you want to go, but more importantly, it'll get you home at the end of the day. As the longest produced vehicle every made by Toyota, the Land Cruiser has more than earned its place in automotive history and in the hearts and minds of many an offroad enthusiast." The "longest produced vehicle by Toyota" they say. "How long" you ask. Toyota says it this way, "The 2020 Toyota

Land Cruiser has earned a loyal following from around the world. The product of over 60 years of global adventures, it's a sophisticated blend of offroad prowess, onroad comfort and unparalleled refinement. It also offers seating for up to eight passengers; after all, adventures are best shared. And paying homage to the legends that came before is Land Cruiser Heritage Edition." Heritage Edition, thus the HE in the description of our Land Cruiser. Over '60 years' of production is the answer to the longevity question. That's a lot of proof of what a durable and acceptable mode of transportation the Land Cruiser really is. The biggest impediment I had was the occasional stump to drive around and deep sand, which can be tricky, but was no match for the Land Cruiser. You can't really see it in the picture, but the Land Cruiser has quite a bit of ground clearance, right at 2' from ground to the driver's floor board. On the Heritage Edition, Toyota has removed the running boards and lower chrome body moldings found on the standard Land Cruiser to give the HE a clean look and to help avoid damage when crawling over obstacles. Toyota has conveniently provided a sturdy hand hold just inside the door to help passenger or driver pull themselves into the cab.

Easy phone hookup and good quality communications using the speaker button on the steering wheel were there, too. This is not your granddad's Land Cruiser. It also has a fulltime 4WD system with Active Traction Control ATRC and Torsen limitedslip center differential with locking feature. For suspension, you have an independent doublewishbone front suspension with coil springs and stabilizer bar; 4link rear suspension with coil springs, stabilizer bar and semifloating axle, all of which means it rides smoother and better than its predecessors. My limited offroad experience would certainly support the smoothness of the ride. Land Cruisers since 2008 have also had Kinetic Dynamic Suspension System KDSS technology. This adjusts front and rear stabilizers based on a set of interconnected hydraulic cylinders. And here's the cool part, this system will not engage during normal driving conditions, when hydraulic pressure is equal. In offroad conditions, KDSS activates when it senses that a wheel has dropped. Our Land Cruiser was powered by a 5.7L V8 Dual Overhead Cam DOHC32 valve engine with Dual VVTI, Variable Valve Timing with intelligence, which is an automobile variable valve timing technology developed by Toyota. The V8 gets 381 HP and 401 lbs. It's made to go where the Lord and the animals can appreciate it. It's nothing more than a towhaul mode button that can be used when pulling a trailer, carrying a heavy load, or when traveling over hilly areas of land like in the mountains. What that actually means is that it raises slightly the shift points of the transmission so that the engine will rev to a slightly higher RPM before shifting to the next gear. This ensures that when under stress the truck will not lug as the next gear engages. Simply select the driving mode that matches the terrain around you and the system will provide unrivaled traction. Selectable terrain modes include — Mud and Sand, Loose Rock, Rock and Dirt, Mogul and Rock modes.

When faced with rocky, uneven terrain, the system will apply more brake pressure to minimize wheel slip and function like a limitedslip differential. Regardless of what terrain you are faced with, the Toyota MultiTerrain Select system will deliver exceptional performance. Minimizes loss of traction or vehicle slip when driving on slippery road surfaces, allowing for stable driving. Tel 914 6988120. Kisco, at 325 N Bedford Road, Mt. Kisco, NY 10549. Tel 914 6665181. Mike and Ant continue to track down classic and iconic vehicles in need of some TLC, with each episode challenging the pair to restore the car to its former glory before selling it on for a profit. So in order to add value to this project and revitalise the wagon's onroad performance, Mike imports a closely related H55F fivespeed transmission from a Japanese domestic market FJ62 model. This includes switching the split transfer case to the new gearbox, rebuilding the steering knuckles, refurbishing the driveshafts, fixing a bodged brake

master cylinder and freeing a seized handbrake line. Catchup on all episodes from the current series through the Motor Trend app or Motor Trend video on demand website. Alternatively, you can watch episodes from previous series via the free dplay.co.uk website or dplay smartphone app. During those years, the show has often tried to reflect market trends in the vehicles it has selected. The fact that there is such a strong representation from Toyota within this latest series is indicative of the increasingly collectable nature of Japanese cars from the Seventies and Eighties. It will walk you through the basics, like oil changes, tire changes and even engine rebuilds. If you purchase this manual, you will likely need other resources to make sure you're doing everything right. The content will probably be a very close copy to that of an OEM service manual that your local moto shop technician will probably be using. It includes every single detail on your bike, specific to its year and model.

These manuals are generally used by service technicians, but you can definitely find them for purchase on Amazon, eBay, or directly from the manufacturer. Make sure to plan for parts shipping times, so your bike doesn't stay in pieces for too long. They likely got started the same way. As long as you're enthusiastic and interested, they'll be excited to help you out. Here are some general next steps that most old bikes will need to go through before hitting the road for the first time. It's less mechanically involved than some of the other projects. Then, give it a charge. Because this usually takes about 10 hours, charging the battery overnight works great. In this case, flip to the next page in your service manual and figure out how to replace it. These little guys tend to get gummed up and contaminated with all that old gas. While your battery is charging, you can start scratching that mechanical itch with a carburetor or simply "carb" rebuild. If you fire up your bike after a good battery check and the bike runs just a little funny, you probably just need to do a simple clean. You can pick up some inexpensive carb cleaner and be fine. Just make sure to take all the rubber parts off your carbs before spraying that cleaner on anything, or it will eat them up like rice paper. If they look like they've seen some good action and the gaskets are more brittle than saltines, you'll need a full rebuild. And since you have the carbs out, it's probably a good idea to do a rebuild anyway. This will include all the factory jets and gaskets you need to put the carbs back together in good order. Are you noticing some rust Your service manual will also include best practices for cleaning your gas tank. Remove your spark plugs and check out what condition they're in. If they're real dirty and you can't really tell where the spark terminal is, you should probably replace them. Most service manuals will also have a guide on what your spark plugs should look like.

Depending on the type of bike you're rebuilding, you may need to buy a spark plug for each cylinder.

This is a good time to turn the key and check out your bike's electrical system. The lights that illuminate your gauge cluster enable you to see important information like speed and distance at a glance, even at night. Light bulbs for older bikes are usually pretty inexpensive, but the cost could change depending on the condition of your headlight. It's now time to change the oil so your bike's engine doesn't chew itself up. Your bike has probably been sitting for a while and the filter is probably filthy, so don't forget to change that, too. Some older bikes are shaft driven, so they don't have a chain. If you have a shaft driven bike, you can go ahead and skip this part. If there's a bunch of rust and the chain has been stretched out, then go ahead and replace it. Don't sweat it. Your service manual will have guides about how to tell whether the chain has been stretched or worn down. There are two types of brakes out there for older bikes drum brakes and disc brakes. Disc brakes are generally easier to maintain and have a lot more stopping power, but drum brakes are perfectly fine, too. Here's how to check both. You'll want to check your service manual and make sure they're up to spec. It's very likely that you'll need to replace the pads, so go ahead and do that. Bleeding your brakes is what some folks might call a "character building exercise." It takes quite a bit of patience to bleed the air out of your brake lines by hand. See if you can use one at your local maintenance shop, or buy one online. If you've determined that you'll need to do this, make sure to check the pistons for pitting and rusting. Too much rust and pitting will mean you'll need to completely replace them. In order to do a full rebuild, you'll need to pick up a caliper rebuild kit that will have all the seals you need.

Make sure to check your service manual for specifics on removing your wheel and drum as well as information on when to replace your shoes. Take care of the rubber side by making sure your tires are in good condition before you take any serious trips. If the tires have been sitting around for an eternity, it's a good idea to swap them out. You can go with factory recommendations from your local moto tire store or have a little fun with it and dream up some tires you've always wanted for your bike. Just keep in mind to check if you need tubes or not. Now it's time to add some personal touches. This section isn't about getting your bike running since you've already got that covered, but these projects will win you style points. Check out all the different styles of handlebars out there. There's no better way to know if they'll be comfortable or not. The bulky factory controls aren't going to win you any style points. Just make sure they fit your handlebars and they are the size and look you want. These systems are bulky, heavy, and ugly. In short, they'll leave you feeling like you're riding with an extra passenger at all times. There are still a few companies out there manufacturing aftermarket exhaust systems for older bikes, but you might need to do some metal work here. Make friends with your local metal fabricator or welder and you'll be set. Get online and see what other people are doing with your bike and aftermarket exhausts. If it's not broke, you won't really need to fix it. It's one of the best things I've done, but definitely not the easiest. My rewire currently looks like a 2 year old's coloring book disaster. Not having to worry about old, faulty controls and never having to replace a fuse is pretty much a dream. Ask the guy that's been working on bikes for 20 years for help. Ask the guy that just did his first build for help. If you're engaged and respectful, most people will be willing to help you out. And if you run into someone who isn't, move along.

There are plenty of us in the moto world who are excited that you're diving into your first build. A broken anything means no riding and no fun. Apply now! Do you have any feedback to pass along Thank you for your feedback. Please let us know how we can do better next time. And as much as we wish we could control the cost of things, any prices in this article are just estimates. Actual prices are up to retailers, manufacturers, and other people who've been granted magical powers over digits and dollar signs. Now the library is available to boaters around the world. Picking out the boat of your dreams and getting a copy of the brochure to use as your goal setting image is most helpful in bringing your dreams to reality. All the information is there specs, standard equipment, optional equipment, pictures, copy, floorplans and more. A prospective buyer will be impressed with the

detail. It is also helpful to have this information for your insurance company and surveyor. When applying for an old boat vessel licence, you need accurate horsepower ratings and load capacity for the Department of Transport. All this information is in the original brochures. Marinas need brochure information to create accurate spec sheets. These are Catalogues as in Original Sales Literature. They are NOT owner's manuals. NOTE PayPal accepts Credit Cards, you do not need a PayPal Account. If the two digit year is followed by "ish", then the date is approximate because many manufacturers didn't date their old brochures OR the brochure is applicable for several years because some manufacturers didn't print brochures either side of the date. None of the boat builders produced an owner's manual in the early years, then only a few did until the more recent years; but they were very limited in information and quite generic to either the whole boat line or boating in general. Please refer to it. For some brands, we have several copies, while for others, we only have one extra.

He'll get back to you with availability, quote and payment procedure. Dinghies MA 14 Terrific barn find. Thrilled with the brochure. Could not find ANYTHING on it. Now I know! Thank you VERY much!!! Williams ON 58 Thank you so, so, so, sooo much! Everything looks great. It's great to have the actual specs. Thanks for keeping such great records. Stay well during these challenging times. This was exactly what I was looking for. I had just bought the 2002 Fish Hawk 180cc from the original owner, who had kept it in pristine condition but had none of the original papers. That is exactly what I was looking for. I am rebuilding this particular boat right now, and it is pretty much identical to the one my Dad bought new when I was a kid. One of the pages that you sent me is the same one that I used to have, but since lost. Thank you again. THANK YOU! Thrilled to have a brochure on the boat. Terrific barn find. Thrilled with the brochure. Now I know! Thank you VERY much!!! This is great!!!!!! Thank you, I am just buying the boat and what a great find this is. All the best, I recently purchased this Baja 252, the dealership could not answer some questions. This is a great starting point. The work you did for me is greatly appreciated. Thanks again. Respectfully, Thank you so, so, so, sooo much! I am looking at purchasing this boat and was told it was a 24'. Could easily be the 25. Boat is still covered in snow so I can't get at it yet. The brochure really helps. Just checked and it has been there for almost a week. My fault for not checking. It is just what I was looking for. I am now a more complete boater. Cheers! As soon as I climbed up a ladder and stepped aboard, seeing all the teak trim and various Clipper design elements, I knew I had found my boat!! She's a little rough around the edges, a couple of years of neglect, etc... But mechanically she is sound as is the hull. So now all she needs is cosmetic restoration, which is what I do best.

These brochures and pics you sent are outstanding and are going to be an excellent guide for my renovations! This is me and wife's first boat so we wanted to have some info on it. With Seaswirl being out of business there were no real specs available. I was also wondering do you happen to have any extra 1995 brochures that you might sell. Please let me know, I have attached a picture of our boat for you thanks again! I apologize for not knowing the precise model designation. There are several of these around me and all are tagged as 3370s, but they are, also, all newer models. It's great to be able to read the stuff that Cruisers, Inc. Thank you, again, for providing this service. Thanks for your quick service. These folders document the provenance of the boat we bought in September for the Heritage Centre. Further it seems with the configuration and layout I have my boat was originally a hardtop. I was wondering why there were no windshield support rods nor any evidence of ever their presence. Well, the brochures showed support rods for the soft top and not the hard top as they were not needed for structural integrity. I think I will look into getting a hard top made as I do like the look. In my haste to read it, I forgot to thank you for sending it. I very much appreciate you doing so. Your old brochures are a wonderful tool in researching the purchase of a used boat. Thanks again. This was just what I was looking for. You also went above and beyond by sending more than one year. I will keep you guys in mind for other boats and recommend you to others that may need this kind of help. Thanks Again. I really appreciate it. I would guess the photo

will arrive in about two or three weeks time. We may earn money from the links on this page.
