Operating instructions. Best regards Soren Here is a link to a 501 manual that might be similar Except for lens, lens board, and carrier There are various light mixing boxes available for the head, and they are easily switched in and out. If you have the 4x5 box, it will work for that and all smaller sizes. If you have a smaller one, you may need to swap it out for a larger one. Measuring tape in cm Click to expand. How long is the other side. Im guessing that that is the medium format mixing box designed for up to 6 cm x 7 cm. Here is the operating manual BTW thanks for the manual Matt Depending on the age of your MG500, you will need the 5x4 mixing box and the lamp extensions that push the lamps out to align with the holes in each side of the mixing box. The extensions can be made from some long BA screws and nuts. There are glassless neg plates for all formats or there are glass plates for 5x4. I use the latter. I use the L1200 with MG500 too, and its a VERY good system. nice find by the way !! Mike Mike Click to expand. It seems links to the relevant manuals had been posted. The 5x4 mixing box does not need an adapter plate. The 5x4 mixing box does not need an adapter plate. Click to expand. A laborator 1200 as 24x36 only is such a tragic Waste. However, depending on the age of the head, you may need to move the lampholders in or out to make sure they throw maximum light into the holes either side of the mixing box in use. So

long as its being used, then youre not wasting an L1200.theyre great enlargers, regardless of the neg size Except for lens, lens board, and carrier Click to expand. Click to expand.<http://seftrade.cz/files/definitive-technology-bp-2004-manual.xml>

So looks like Ive got an Omega D3, Durst M70 and Durst M805 to get ready for new homes if this one Works They pop up on eBay now and again. MikeThey pop up on eBay now and again. Mike Click to expand. Question is whether they are worth getting og notProofs and quick prints probably OK with glassless. You can get new glass here. Have you lost your user manual. The opal bulbs for the Durst 138S condenserheads have been out of production for installed on the dock, a USB cable, minimal instruction manual and a warranty card. Durst 450 LATIBOX, 4X5 mixingbox for use with CLS 300 or CLS 301. A filter kit is available for below the lens use. The kit comprises 12 mounted contrast filters, a mounted safelight filter and a filter holder. MULTIGRADE filters are very easy to use no complicated calculations are needed when changing from one filter to another. MULTIGRADE 600 EQUIPMENT The MULTIGRADE 600 professional exposing system is a very convenient means of exposing MULTIGRADE papers over a wide contrast range of 00 to 5. It works on the closed loop system, with a single prewarmed lamp, to give repeatable results, even at high contrasts. The light output is precisely controlled by the motorised shutter. It also gives true white light for composition, focusing and exposure.

Once calibrated, the exposure probe automatically calculates the exposure and contrast needed for each negative. It can be used under normal safelight conditions. The MULTIGRADE 600 system can also be used with most automatic roll easels. The MULTIGRADE 600H enlarger head replaces the standard lamphouse on the most popular professional enlargers. The control unit, power supply and probe complete the system. There are two versions of the MULTIGRADE 600H enlarger head. The medium format version is suitable for the Durst M805 enlarger. The standard format version is suitable for other enlargers including the Durst L1200, DeVere 504, Omega D and Beseler 45. The enlarger head fits directly in place on the Durst M805 and Durst L1200 enlargers. An adaptor kit is needed with other enlargers. OTHER VARIABLE CONTRAST ENLARGER HEADS The contrast of MULTIGRADE papers can be controlled with the range of variable contrast enlarger heads that are

currently available. Some of these are easier to use than others, and several give excellent results. Many manufacturers make variable contrast heads for their enlargers which are specially designed for use with MULTIGRADE papers. Enlarger heads that have been designed in conjunction with ILFORD include those from De Vere, Dunco, Kaiser, Leitz, LPL and Meopta. For use with MULTIGRADE papers, follow the instructions provided by the enlarger manufacturer. [Prev](#) [Next](#). Prices ahve sored in recwent years. The older De Ver 54, 54a, enlargers are OK, but the condenser heads are large, the cold cathode heads a bit old, tubes expensive. Ideally a colour Dichroic head is the best. The floor standing models need plenty of ceiling height. Ian All LF enlargers need headroom so its wise to check before you buy. I had a friend who constructed a recess in the ceiling of his cottage. I second Ians recommendation of De Vere. They are very well built and there are still spares available. Once you have used the waistlevel controls you wont want to change. Two small points about the condenser v diffusion question Many people claim that they get smoother and better prints from a diffusion enlarger, although a minority differs. There is plenty of discussion elsewhere on the web. A more significant point is that if you plan to use a condenser enlarger for other formats, you may need to have the correct condensers for that format. Some enlargers are adjustable, but others have interchangeable sets. There may be different format

mixing boxes for diffusion enlargers too, but I haven't found any difficulty myself in using the 5x4 box for all formats. I might simply have very low standards. I'm afraid I can't give you a catalogue, because it's a very long time since I bought my own enlarger. There may be other factors that influence you, of course. Have you considered the lenses you will be using. Money spent on enlarging lenses is never wasted.

There is plenty of discussion elsewhere on the web. That said, however, back hundred years ago when I used a condenser enlarger I found it a pain to keep the condensers clean. I had to cut two roof joists and build a section to allow me to use my floor standing De Vere 5108 at the top of its column. The 504 uses the same frame. Alan, I'm sure you're right. It's a while since I read Ilford's instructions, but they used to give developing times for both kinds of enlarger. There may be some genuine differences. With smaller formats, grain may be more visible with a condenser enlarger and alignment of their optical system will be more critical. Neither are insurmountable problems. I suppose we should mention the proposed Intrepid system. As far as I know, it's not available yet, but there is information on their site. Even if it's not the ideal enlarger, it's not intended to be that, but a way of dipping toes in the water until you meet your perfect darkroom partner. Choice of enlarger lens is critical as well, in tight situations a 135mm is beneficial for 5x4, there's no difference in print quality between my 135mm Componon and 150mm Rodagon on 24x20 and larger prints. If I had the cash in hand to reinvest in a new enlarger, the topmost on my list would be a big Durst that would allow me the benefits both tungsten AND pointsource illumination. Ken The owner of my local prolab recently closed was actually an ex Durst UK engineer he used De Vere enlargers and Durst rollhead printers. I went to the lab one day about 16 or 17 years ago and most of the enlargers were in a skip, critical bits were damaged beyond repair at a time when you could get a good 504 for under 100. I paid 600 for my 5108 a year or so later and it came with 4 lenses and a large Beard easel. Sold separately they were worth more than I paid for everything. If cost is an issue I'd get a condenser enlarger and convert it with a home made LED head, there's details online.

Ian I also have Omega D2 and a De Vere 507 which is great for large prints since you have focus knobs at paper table. I've just commented in another thread about the problems of back ache if you have an enlarger baseboard much lower than bench height. The De Veres have the focus and height adjustment wheels at the front under the base board, they don't show in that advert but they will be there. This means you can't bench or wall mount with a bench section that can be dropped. Ian However it would be easy to get something made here. As I mentioned earlier the advantage is you can have a section of bench that sits flush or can be slotted in lower for bigger enlargements overcoming ceiling height issues. Ian I had already noticed the 504 Mr Barber recommend on eBay and am currently bidding for it however I suspect it's going to go over my current budget so I may have to spend some time saving and then have another go at it. That is unless someone has a 504 or something similar that they are willing to part with for a reasonable price to a good home! I'm from Germany so shipping isn't easy but possible. However the timer and the Stabiliser can turn the enlarger on and off, so with the wrong combination of the switches the timer won't work. It's not simple wiring though !!! I'm just saying you could have quite a few additional costs so don't bid too high. Ian.
