It is a good idea to attach the micron gauge to the vacuum pump before evacuation to make sure the pump pulls down to at least 50 microns. If it doesn't, your pump oil is contaminated and should be changed. A compound gauge only indicates that a vacuum is being produced, but does not tell you if moisture and acids are still present in the system. Refer to page 11 of our catalog for more information. To calculate the overall star rating and percentage breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. Please try again later. Certified 1.0 out of 5 stars Called JB Industries they will not warranty because I didn't buy from them. The product was everything that I wanted and more. I used one just like this for years until it finally broke. I'm glad I found another one. But I learned that micron vacuuming is quite exacting. The price is good, but the 2 button interface takes some practice to get the feel of. Delivered quickly, and very easy to setup. The fitting is a standard refrigeration fitting, so with a couple of small fittings I was able to read vacuum on some industrial vacuum pumps. Starts up ready to go. Would be nice if it had included a plug to seal off sensor when not in use. Operates as advertised. ARP changes coming soon. <http://stattus.com/assets/delaval-cell-counter-dcc-manual.xml>

This is what mine does Turn it on and it displays either a numeral one or JB. I can't remember which but it does one first and then the other. Then some time later it displays 213 Every little while it scrolls AUTO CAL for a short while. Then it goes back to showing 213. If I have it open to atmosphere or connected an evacuating system doesn't make a difference it acts as described above. What does yours do Then displays 1. Flashed auto cal a few times. Went back to displaying 1. If not; how are we supposed to know the micron level achieved. Then displays 1. Flashed auto cal a few times. Went back to displaying 1. In use, it starts off at 000 not sure of the number, reading gets lower, flashes auto cal from time to time, shuts off every 10 minutes. Because mine does that no matter where it is or what it's connected to. Although it never starts at 000, reading gets lower, etc. it doesn't do any of that. It just does the sitting on the table part. In use, it starts off at 000 not sure of the number, reading gets lower, flashes auto cal from time to time, shuts off every 10 minutes. Kept the last one in the plastic case they make for it. Cleaned it when it needed it, etc. The thing never read right IMO. It was inconsistent, and would display a micron reading at atmosphere about 50% of the time. I still have it. In its box, in my

toolbox. It was replaced by the YJ version of the BluVac

II. <http://ap116.ru/userfiles/delaval-milk-meter-mm-15-manual.xml>

ChaseBecause mine does that no matter where it is or what its connected to. It just does the sitting on the table part. I love my bluvac. PHM, you just got a bad one. All where a pos, except for one, it has taken all kinds of abuse, but still works really good. But the pumps are A1. Whoever got my service van when I ditched Sears got it as Im pretty sure I left on there. However that gave me the opportunity to get a bluevac and never looked back. The only issue I had was when I got a job of nylog in there. Other than that, it displays from atmosphere down into the low microns every time. My buddy has one too and his doesnt work half the time, guess I got a random good one. I should buy a bluevac and hook them both up to see if there is a difference in reading. I think all of them are in micron gauge heaven. Bluvac and move on with life Sent from my iPhone using TapataalkThe factory told me that it will withstand 100 psi of positive pressure without sustaining harm. So I attached it, with a short, ballvalve, hose to the truesuction port of each unit. My gauge hoses were attached to the standard access port. The micron gauge acted as Ive described. Inducing me to conclude, with your kind assistance, that it was defective. Today I was cleaning out my truck and came across my new cheapie vacuum pump. So I connected the micron gauge, using the same hose, to the pump and started it up. It very quickly showed 400, 300, and 200 microns before I switched the pump off. So now what Two different truesuction ports, on two separate heat pumps, are Both clogged. Come on how the hell can that be true Post Them Here All rights reserved. JB's DV22 reads vacuum in seven international units microns. PSIA, In, bars, Pascals, Torre and more. The DV22 has a micronIt is a good idea to attach theIf it doesnt, yourA compound gaugeRefer to pageWed love to help you out. You can try searching for what you are looking for using the form below.

If that still doesnt provide the results you are looking for, you can always start over from the home page. Model GMac with 3ft. 3colored Refrigeration hoses. Pressure in PSIG, 3 brass hose anchors on back of the gauge for the hose ends to attqach to. Prevent dirt getting into hoses. Temperature in F for R22. Here is a partial list of what we supply Vacuum pumps. From 1.5 CFM to 12 CFM, single stage and dual stage, over 10 models to choose from, Clamp meters and multimeters. More functions get the job done easier. Halogen and gas leak detectors. Find the hardtofind leaks and fix it, Manifold Manometer gauge sets and hoses. Refrigerant Recovery Unit, Refrigerant Charging Weighing Scales, Digital thermometers. Infrarednoncontact thermometers, Hygrometers, Manifold gauges. Manometers for system diagnosis, Oil and Florescent dye injectors, Tubing tools. Posted with Maintaining and commissioning, refrigeration and heat pump systems including the newest 16 SEER systems. Compact design. Hardened housing and extremely convenient operation for easeofuse, transport and setup Measurement of low and high pressure as well as calculation of temperatures. Fast and accurate 39 refrigerant profiles built in for automatic PT calculations The Testo 550 is a highperformance Refrigeration System Analyzer that accurately performs temperature and pressure measurements in seconds. It automatically calculates superheat and subcooling for 31 different refrigerants. Quickly and easily. With a large easytoread backlit display and two temperature inputs, it can calculate superheat and subcooling simultaneously in realtime. The 550 is simple enough to use right out of the box and rugged enough for daily use by todays demanding HVAC technicians. Send us a messageContact Seller We are shipping from just north of Boston. MA in the United States. For international customers, do not assume a product will work in your country due to various International Voltage requirements.

Ask first if you are not sure. Warranty We are an authorized distributor. International Shipping Terms International customers are responsible for all shipping charges. But stronger than brass Color coded Easy to grab big nob control valve handles. DO NOT need to change hose connection between evacuation and charging, a Schroeder valve on the service line, Pressure in PSI, Heavy duty hook won't pull out. Temperature in F for these refrigerants R410A, R22, R404A, making this manifold one set does it all. Teflon O-ring washer provide the best seal and the most durability Do not need to switch the hose from vacuum to charging. Prevent the air noncompressible into the system. CHECK THEM OUT! VIOT. Located in Champaign IL Mastercool 98061 Digital Vacuum Gauge packaged in blow molded case Mastercool 98061 Digital Vacuum Gauge packaged in blow molded case. The main problem with many small handheld units is their inaccuracy and durability. Although the thermocouple sensor has been proven to be much more accurate and durable than the thermister type. The problem has been the inconvenience of a cumbersome tabletop unit. Mastercool is introducing a hand held unit using thermocouple technology. This vacuum gauge has been designed with the technician's field environment in mind, allowing for self calibration and a sensor that will not be damaged by small mists of oil. The Mastercool unit allows for a target vacuum range to be programmed with a light sensor indicator. Now you have the freedom to continue with your other work and come back to the system once you see the indicator light signaling your target vacuum. SPECIFICATIONS Response Time 250 mSec. Field operations may greatly deviate from these levels.

We sell everything from residential and commercial controls, to draft controls and venting equipment, to hydronic and steam specialties. When shipping customers their parts we aim for speed and accuracy. Click to close full size. For warranty information. YELLOW JACKET 69196 Digital Superheating Subcooling Meter. Businesses like yours and ours have historically been at a disadvantage to large Vacuum sensor with cable, clampon thermocouple, data logger CD and USB cable in a plastic box SPECIFICATIONS Pressure Display PSI. Customs brokerage and taxes. Feel free to put in an offer on this great used studio piece of cool electronics. We are good people just trying to make a living and we are not a big box store. Canadian Buyers Must pay GST if in Saskatchewan also add PST. Here is some info from DBX on the 586 Dual Vacuum Tube Preamp This product was developed to help you improve the sound of your digital and analog. For economic reasons. These console preamps are typically of lower quality than a single, dedicated unit. You can use the dbx 586 to get your basic tracks sounding great and then you can run the finished mix through it for final "tube" treatment and equalization. The dbx 586's preamplifier circuit is a hybrid design consisting of a high voltage class A vacuum tube amplification stage. Coupled with an ultra low noise, low distortion solidstate driver stage. The vacuum tube amplification stage is a classic. High plate voltage design utilizing a pure class A topology. A parallel triode arrangement is employed. In addition to a fully regulated plate supply to maximize noise performance and transient response. The premium grade 12AU7 vacuum tubes used in the dbx 586 are hand tested and graded specifically for gain. Noise, and microphonics. Precision 1% resistors are used throughout the audio path to ensure performance stability and low noise. To ensure years of troublefree operation. Each dbx 586 must pass a rigorous set of tests. If you are looking at this you probably already know what a cool and useful unit the 586 is. This one is in perfect working order and is cosmetically very clean with a few minor surface scratches. Mostly on the bottom of the unit. I do not have the users manual but it is easily acquired on the DBX website in PDF format. Of course, power cord is included.

We are starting this one low with no reserve. Thanks, PSA Local Pickup We have moved to a NEW location.
