True Believer 5.0 out of 5 stars I needed to convert my vast VHS library of teaching materials to DVD format. This product is working perfectly. There are just a few points I might add that I did not see in the reviews I read. I think some are so obvious that anyone with technical experience might not have thought they needed mentioning. First, if you are trying to convert plain old VHS tapes, you'll need a

VCR. <http://equipociclistaugeraga.com/ciclistas/userfiles/dell-inspiron-518-owner-s-manual.xml>

I didn't have one, and I actually thought not understanding the scale of the photo of the product that the tapes would go IN this machine. The good news is, you only need a VCR and one cord with red, yellow and white plugs. This will not tie up your TV. You play the tape into the converter. You just hit the pause button to skip those parts. The one thing mentioned in earlier reviews that I would just like to reiterate is that you need to change the recording quality setting from HQ to SP. This will give you 2 hours of video on each disc, as opposed to just over 1 hour and 20 or so minutes. Finally, you should buy DVDR type DVDs. This machine is very good at what it does, it copies old digital camcorder, VHS tapes, or 8mm tapes onto a DVD. This machine can't create high definition quality from old tapes. It can't edit but I suppose you could pause the recorder if you knew exactly which parts of camcorder, VHS, or 8mm tapes you wanted to skip. I don't know my tapes that well. If you are a hightech editor, you probably won't like this machine. I view the window to make sure it is running properly then leave for the 12 hours while it is recording. I'll attempt to post a photo of the back of the box, great info on limitations. I will only comment on how I used it. I transferred VHS tapes of family home videos to DVD disc that can be played in my regular DVD player or on the computer. It was VERY easy. The manual was straightforward so I didn't wade through a lot of info I didn't need it directed me to the exact kind of recording I needed to do. What's in the box the Sony DVD transfer machine and the power cords. You will need your own patch cord from your player camera, VCR, etc to the Sony. For the VHS player I just used the 3color red, yellow, white connections and already had the cord. You will need a way to play the video tape. This machine does NOT have a slot for VHS tapes. SO, you hook the VCR to the Sony, push a few buttons, and it does

its thing.<http://www.fobas.cz/userfiles/dell-inspiron-5160-repair-manual.xml>

You can watch the video as it plays in real time on the tiny Sony screen so you dont need the TV. If the tape hits a bad spot noise the DVD recorder pauses until it gets a signal again. I am THRILLED with this device. It would have cost me a fortune to have the VHS tapes transferred by someone else.I use it in two ways. To transfer old VHS camera footage to DVDs and to transfer mini DV footage to DVDs. It has performed flawlessly to date and I have transferred about 10 tapes. As long as you use setup properly before formatting your DVD, you are good to go. Have a SP VHS tape Choose SP in setup and it formats the DVD to accept two hours of footage. Make sure to choose video in if you are using rca cables and voila.DVD. When you are doing VHS tapes you do have to start the VCR and then quickly press the record button. How hard is that But using firewire with mini DV tapes it is in easier. The unit first rewinds the tape if necessary and then starts the record button itself when you press the record button. Someone mentioned interlacing.I have seen no interlacing artifacts in the mini DV tapes I have done so far. This whole process is just so amazingly easier than what I used to have to do. Capture the footage.encode to DVD.author to DVD.and then write to DVD.sheesh.taking so many visits to handle each step, you eventually move on to easier activities and there you are.back where you were. But with this little guy, I can set it and forget it. Come back later.and finalize the disc. Yeah, before ejecting, the unit asks if you want to finalize, meaning no more data can be written to the disk and it then can be used by the DVD player. Just very very cool. Strongly recommend.If I could go back in time I would have bought 2 or 3 when the Sony Store was still around. Thank you so much Amazon for helping me restore my family Home Movies!

The simple navigational buttons enable you to quickly access the menu features, such as your recording options, erase options, and menus. For quality control, the DVD recorder screen grants you the privilege of watching the movie in real time as you record it, and the handy preview option even allows you to see the quality of the video before you burn it to a disk. This sleek and compact recorder also provides easy hookup to your Sony Handycam Camcorder, enabling seamless DVD recording of home movies. It is however the weakest performer. Pros Small footprint, Cool MiniMonitoring screen, Big Buttons. Cons Limited Menu Labeling, Problems Recognizing Incoming Signal, Inconsistent Performance. Weve had two fullsized versions of this technology. Our 1st one was a Symphonic and died after four years. Our 2nd one is a Magnavox that performs flawlessly to this day. Our problem is that we use it to backup our favorite TV Shows and movies from our DVR, but my wife has her own DVR that she records programming on that she often wants to back up, which means pulling the Magnavox out of the rack in the living room and hooking it up in the bedroom to archive her soaps and episodes of Dr. Phil. I decided to buy this small seemingly easy to operate version for her needs. I also thought it would be a great solution for when someone wants a copy of footage from my Handycam, whenever we capture lifes moments.

The Sony VRDMC6 is a sleek and sexy little number that accepts multiple video inputs composite RCA, digital in, SD Cards, Sony Memory Stick, etc., but has very limited menu labeling. Our other DVD Recorders have intuitive labeling systems so that you can type in custom labels up to 80 characters of the content of the finished video. This little Sony does not. It also does not always recognize the RCA composite input for record, though it displays the incoming image on its monitor screen. This happens most often when its hooked up to the DVR output. Sure, like most other units, it wont record copyprotected content from video tape or even DVR, but it does not recognize nor will

it even record just the news consistently. And there's no predicting when it's going to act up. I record all episodes on DVR and back them up to DVD for later viewing in my den at my leisure. I recorded two episodes to DVD on the Sony VRDMC6 and finalized them. I even turned the unit off and tried again an hour later to no avail. I backed out to make sure it was in VIDEODVD mode not DVDVD and still nothing, so I just turned the unit off. The next day when I turned it on, it recorded the 2nd copy no problem. For use with my Handycam, it's flawless. It reads Sony memory sticks, SD card and composite inputs from the handycam like a champ. In fact, it takes to anything Sony like a champ, however not gear from other manufacturers. Another annoying factor is that it has to format each disc before it will record on them, which can take up to a minute or more, so good luck catching something on the fly. Either my unit is defective, or there are some serious issues with the VRDMC6. In any event, I'm seriously considering returning it. It works great as a field DVD recorder for my handycam, but it is otherwise frustrating when we try to use it for the purpose for which it was purchased. Pronalazjenje stavki.
