To avoid any electromagnetic noise, make sure the PLC is properly grounded. DO NOT touch terminals when power on. Introduction Thank you for choosing DELTA's PLC DVP series. At the bottom of the PLC is a small retaining clip. To secure the PLC to the DIN rail, place it on to the rail and gently push up the clip. To remove it, pull down the retaining clip and gently pull the PLC away from the DIN rail. As shown on the right When installing the DVP series PLC, make sure that it is installed in an enclosure with sufficient space as shown below to its surroundings so as to allow heat dissipation. The specification for the terminals is as shown on the left. If the power off time is too long or the power voltage drops, the PLC will stop operating and all the outputs will be Off. For relevant electrical specification, please refer to the function specification. 2. Be careful with the connection of the common terminals when wiring outputs. Note 6 Please connect power module terminal and analog output module terminal to system earth point and make system earth point be grounded or connects to machine cover. Warning DO NOT wire to the No function terminal. This PLC also has error indicator and whenever an error occurs, the display will blink and show "Er" and "01" or "02" alternately 01 indicates syntax error and 02 indicates PLC program loss.
