The game in the protagonist three different characters. These characters are unique from other GTA interpretations because for the first time ever, you can actually play as more people. Inside the game, you can switch from one character to another, and sometimes you could play like all the different characters at different points in the mission. To be honest, compared to the previous series interpretations, GTA on Android and iOS is not the same as its previous editions. In the previous GTAs, there was much more emphasis on the plot and not so much on the gameplay and the customizable open-world aspects of the game. While the game is certainly fun, if you are looking for a very deep-depth and more true-to-life history as some of the other games present, this is not the game. The history and events in the game are largely larger-than-life and a little tongue-in-cheek, as with other GTA games. However, because of this, history is a bit and difficult to believe, making the characters lovable, but not only as captivating as previous versions. But regardless of, the game is still tremendously popular and is still very good in terms of stories, but it's just previous games set the bar so high that is a bit difficult for this version of competing.
