You can also delete this commentary should you wish to do so. Kisses, Kent Then again, the extra control would be nice, nevermind. But yeah, I decided to only post this here to avoid doing too much damage to the market. The RSD is a relatively rare find on ebay on a normal day though. Searching around here for useful info on the RSD10beyond the manual led me to this thread. Fuck!!!!!!!!!! MitchXIs demos have got me gassing for the RPS10. These Boss delays and pitch shifters from the 80s are just disgustingly awesome. Its like the audio equivalent of a chemical dustbin experience.The inverted pitch shift mode is awesome. Both of these are amazing and still totally underrated. All of the other boss microrack fx I have are as wellrph10, rbf10, rrv10. I use them as modular inserts via a Hordijk Active Matrix and they overdrive pretty nicely with the modular. It makes me not miss having an analogue delay, definitely a keeper.

The RPS has a regular reverse delay mode too! Cool! I stupidly sold my Boss PS3. Glad I kept the PS2. The Rainbow Machine makes up for the absence of the PS3. Sounds like the RPS will strike the final nail in the coffin. Cool! I stupidly sold my Boss PS3. Glad I kept the PS2. The Rainbow Machine makes up for the absence of the PS3. Sounds like the RPS will strike the final nail in the coffin. You sold it to me about 4 years ago. Id love to get the rps10. The dsd2 is also great fun with a trigger out drum machine, you can get delays only on the trigger pulse or use it to add an extra voice. I use a it a lot to give my 606 a 909 kick drum. I have always been curious about the small Boss rack series. I see a couple locally that I may wish to negotiate for. I have always been curious about the small Boss rack series. I see a couple locally that I may wish to negotiate for. Very nice little box. Stephen Also

built rock solid. Nothing to go wrong really. Collect two put em on a rack shelf Im still trying to get the pitch following input to perform, but I think it might be a case of feeding it a busy signal and embracing the quirks. Were you asking if the Power Supply used affects the sound. I have only used it with a classic Boss wall wart. I opened mine up to fix some cold solder joints. Man that thing is stuffed full of circuitry. Did you miss your activation email Please contribute! Please dont be so critical about people looking for larger amounts of information than you want to digest. Once you design and build a digital pitch shifter, then tell me about unnecessary complexity in terms of what it took to do the task in the mid 80s. What does your DSP pitch shifting design look like. I designed and built one in the early 90s and it was big and power hungry. Hint it aint that easy. Sorry SkeeziX, I dont have the schematic but I would love to see it too. Take care, Peter The schematic, however, would gigaaantic.

If you need any help with repairing if such is the case, I can try to help, I modified my own slightly. Colin Please contribute! Shouldnt one of the knobs actually change the time setting. Tweak the knobs till the cows come home and it just wont change. If you dont mind my asking, what kind of slight mod did you do to yours Shouldnt one of the knobs actually change the time setting. If you dont mind my asking, what kind of slight mod did you do to yours. Still a very fun box though. Colin Please contribute! Id like to see a schem also, if anyone ever gets their hands on one. Itd be worth a look to see what kinda thinking goes behind one of those units. Wouldnt try to build one tho. Even if it werent too complex for my meager skills, I dont really like the sound. If you ever find one SkeeziX, let me know. And out of curiosity, what DO you need it for You give it to your girlfriend and she eats up the best pieces and throws the rest away. Although, Im guessing SkeeziX stopped looking for this about 8 years ago! I could never understand it until now, I have the danelectro wasabi reverse delay which has a tap tempo switch, but it never seems to work for the reverse delay. Maybe there is some unit out there that can MIDI sync reverse delay. Anyhow back on topic, if youre opening up an rps10 you might want to experiment with messing around where the keyboard control comes in, maybe get some different wave forms for the control VCOs. I have absolutely no experience in it, but one of the few things Autechre admits as one of their primary sound devices are boss half rack delays that theyve circuit bent themselves. However, the bypass on it is not so good so Id consider putting it in a bypass loop. I would just get the boss fs5l I was lucky mine came with a manual. If anyone wants me to scan it, let me know, cause I dont think its available from the Roland site.

I was using the one I have had for 15 years for funky effects using a mic but now I would like to use it with a guitar, and I think the manual could open up my eyes to various functions of the RPS10. You can make it sound really great or really, really horrible depending on how you set it up and what you feed into it. Does anyone know where i can get the hold pedal though. I make a lot of glitched up stuff so that would be amazing to have. All rights reserved Back to top. Please do not offer the downloaded file for sell only use it for personal usage.
