I know on my engine, there is no room for the cap to come off the governor flyweights unless the Governor shaft assembly got loose and the paddle gets out of position or the governor gear shaft breaks. Suppose if the retainer came out of shaft groove it could allow the governor gear to slide up, but still think the paddle would keep it from coming off. Did you make sure there was no damage the the governor gear parts before reassembly. Would hate to imagine what loose parts would do while engine running. If that doesn't give you enough info, here is what the manual says leaving out items I don't think will apply STATIC GOVERNOR ADJUSTMENT BEFORE STARTING 1. With governor lever loose, push governor lever counterclockwise as far as it will go wide open throttle and hold in this position. 2. Rotate governor shaft counterclockwise as far as it will go. Torque governor nut to 100 in. lbs. DYNAMIC GOVERNOR ADJUSTMENT General Information all models all models Note Carburetor mixture adjustments must be made before adjusting governed idle and top no-load RPM. Assemble remote controls and check for proper adjustment. To increase or decrease engine RPM beyond this range, change governor spring. Remote Speed Control PreTwin II Type Nos. Hope this helps. If anyone has better information or easier way, I will not be offended as I am on your turf here.

You've helped me a lot. Trying to return the favor. It was next to impossible to. It was over revving and

took it apart and. So I pulled the brake off and replaced the brake pads. Then while I had it jacked up, I spun the rear wheels and the brake shaft did not turn. I tried to turn the brake shaft and it would turn back and forth a small amount. If I disassemble the transaxle, what do I need to look for. Or does the rider have to be on the ground so that both wheels turn the same direction I have jumped all safety switches and disconnected the white wire next to dipstick which I believe controls the safety switches as well, all I get is an occasional clicking in the motor no turning over at all. We welcome your comments and All rights reserved. You may freely link View our Privacy Policy here. Does anyone know the setting for Top No Load Speed. The repair manual says its in sales manual MS 4052 but I don't have access to that manual. Thanks. Learn more opens in a new window or tab This amount is subject to change until you make payment. The aluminum engine was the perfect solution for the recently invented rotary lawnmower due to its lighter weight and lower cost. The idea for his first product came from an upperlevel engineering class project at SDSC. This first product was a sixcylinder, twocycle engine, which Stephen Foster Briggs developed during his engineering courses at South Dakota State.

<http://www.petrokood.com/images/a-boy-and-his-blob-instruction-manual.pdf>

After his graduation, he was eager to produce his engine and enter the rapidly expanding automobile industry. Bill Juneau, a coach at South Dakota State, knew of Briggs ambition and the entrepreneurial interests of Harold M. Stratton, a successful grain merchant who had a farm next to Juneaus farm, so he introduced the two. Briggs purchased an engine patent from A.O. Smith Company and began powering early washing machines and reel mowers as well as many other types of equipment. The company went public on the New York Stock Exchange in 1928. Some prewar engines were made with aluminum, which helped the company develop its expertise in using this

material. Frederick P. Stratton, Jr. served as Chairman until his retirement in 2001. The resulting company is Strattec Security Corporation. The Beacon Group had previously purchased the Consumer Products Division of Generac Corporation now Generac Power Systems in 1998. This joint venture was notable for the manufacture of vertical and horizontal crankshaft engines from 12.5 to 22 hp 16 kW under the Vanguard brand. The completed single cylinder Vanguard engines were shipped directly to customers worldwide. MHI had exclusive marketing rights under their own brand name in Malaysia, Taiwan, South Korea and Japan. In other countries both companies competed with the same product under their own brand names which led to considerable friction, and together with escalating production costs in Japan, caused this otherwise successful relationship to fail. Production stopped in 2011. It was improved five years later in 1958 with the introduction of the KoolBore all aluminum and SleeveBore aluminum, with a cast iron cylinder liner. The least costly, most common way of complying with the new regulation was to put a flywheel brake on the mower engine, to stop the engine and therefore the blade immediately when the handle was released. The EasySpin lobe hump was moved to the exhaust valve, but this reduced engine performance.

Competitor Tecumseh had made a capacitor discharge ignition setup since 1968 for their cast iron engine models, expanding its availability and making it standard equipment on vertical shaft engines powering lawn mowers in late 1976, five years before the advent of the Briggs Magnetron. The logo has the name BRIGGS STRATTON in black letters on the white midsection of the masthead. The words 4 CYCLE ENGINE are on the red top portion of the mast and the city line MILWAUKEE, WISCONSIN, U.S.A. is written on the black bottom portion of the mast. Although the logo hadn't been changed much since then, the wording on the top and bottom sections of the mast were removed in 1985, although the company continued to use these two sections with the respective wordings ORIGINAL red section and SERVICE PARTS black section until 1989. Some variations include Some models also had forward neutral and reverse transmissions. The company employs over 3,000 employees in six states. Manufacturing plants are located in Poplar Bluff, MO; Auburn, AL; Statesboro, GA; and Munnsville, NY. By using this site, you agree to the Terms of Use and Privacy Policy.
