Christine from KC 4.0 out of 5 stars I ended up printing about 200 prints that day. I used a Canon 5D mark II camera, wirelessly triggering a strobe studio light, hooked up by cord to the Canon Selphy printer.and would just the direct printing option via the playback on LCD screen.

I was printing directly from my camera and didnt realize until beginning that I wasnt able to take another picture until the current image was done printing. That was a big draw back when I had a very long line of Brides waiting for their turn to be photographed. I didnt time it exactly, but I think it took a minute or over to produce each print. Considering the other products in the price range, this was the perfect printer for the job.I just need to order a second one and have two cameras going the next time I have such a large event.I had those same questions myself and looked for the manual which tells you everything you need to know. This beauty will do lots of different sizes and will even do an index of pictures for you. I love the index because it means I can get the most out of one sheet at a time. I doubt I will ever use my home printer or send my photos to a lab again.The pictures are crisp and clear and the menu options are quite vast. I decided on this model over the 910 because it was slightly used and very cheap. If you havent tried a Selphy before or your on a tight budget this is the one to get. You will be printing out pics just like your facebook friends in no time and you wont have had to pay as much as the 910 users did. Something to keep in mind is the quality of the photo you are printing is only as good as the camera or phone you use. This printer wont replace a professional photographer but then I doubt you will be sticking those in your scrapbook,project life,midori or hobonichi anyway.However, once I opened the box and printed out my first picture I declared it mine. The picture quality is amazing. It looks like it came from the photo lab. I love that there is just enough ink to do the number of pictures that come with the ink, so you dont run out of black but have plenty of yellow. My son loves watching it print. It pulls the paper back and forth laying down a yellow layer, then red, then blue, then a clear coat.

I cant tell you how happy I was about that feature after having so many of my HP printer images get ruined when splashed on. After playing with this printer for a bit, I decided my mother had to have one and I also bought 4 for my job; since we need to do printing on location without a computer it is a perfect fit. The only down side, is that the slots dont fit all memory cards. I have to plug my camera up using the USB cord, but I can flip through my pictures faster this way then when using the printer to search through the card.I bought one for myself for a project, and now Im getting one for my technologicallychallenged mother as well. Ive used it connected to the computer, plugged into the camera only, and straight from the SD card slot, and each option was very simple to work with. My favorite part is that since its a sublimation printer and not an inkjet, you buy packs of paper that come with printer cartridges and are guaranteed a certain number of prints. No more running out of ink halfway through a photo. The printing time isnt the fastest, but its really no slower than my hp allinone for printing a 4x6 photo. Pros Quick setup Easy to use Decent picture quality Wireless capability although the bluetooth adapter is not included No ink cartridges to worry about Cons No custom paper sizes Bluetooth and battery pack cost extra Overall, for the price I couldnt be more pleased with this little printer. ingeniously designed printer. Its basketlike case carries paper and ink cassettes, AC adapter and cable, optional battery pack, extra ink and paper neatly inside with the printer and its easy to carry around with a built-in handle and integrated locking mechanism. Labquality Prints That Last a Lifetime The SELPHY CP770 produces brilliantly colored, long lasting prints that rival the appearance and durability of images created by a professional photo lab. Using 300dpi dyesublimation technology with 256 levels of color, this compact photo printer renders skin tones, shadings and fine details with true-to-life accuracy. A transparent water and fade-resistant coating offers added protection against the damaging effects of sunlight and humidity, so photos last up to 100 years. Print From Camera Memory Cards Insert your camera memory card into the card slots on the printer and preview the images on the LCD monitor. Plus, you can enjoy the benefits of automatic DPOF printing as well as index, partial image, multiple copy and exact size printing.

Print From Your Computer For maximum versatility, you can also connect SELPHY CP770 to your computer. Printer drivers and Canon software for both Windows and Macintosh systems are included with the printer. Optional Wireless Printing Print images from your Bluetooth enabled camera phone with an optional Bluetooth adapter. Just connect the optional Bluetooth adapter to the USB port of the SELPHY CP770 Compact Photo Printer and you're ready to print wirelessly from a Bluetooth-enabled camera phone, PDA or other photo or video device. The Printer is also equipped with an IrDA interface so you can print from handheld portable devices as well. Optional Battery Pack The optional battery pack makes the SELPHY CP770 truly portable providing enough power on a full charge to print up to 36 postcard size prints. With it you don't have to worry about having AC power available to print so it is possible to print family picnic pictures right at the picnic, and everyone can leave with their own memories in hand. Let us know YOUR RECENTLY VIEWED ITEMS Browsing History ON Clear History Not responsible for typographical or illustrative errors. The dyesublimation printing process is different from your typical inkjet; the paper makes four passes through the machine the first three lay down the base colours cyan, magenta, yellow and the last pass places a thin overcoat on the image to prevent discolouration and extend durability. Canon tells us the ink in one cartridge should be more than enough to last through a pack of paper. First, there's no way to view more than one image at a time; you can either print all the photos on the card at once or scroll through the entire collection and manually specify which pictures you want to print. Also, the small icons on the picture screen that represent the current settings are difficult to decipher without peeking at the manual — at least until you've used the printer long enough to memorise their meanings.

For our speed tests, we connected the printer to a desktop using a USB cable in order to standardise the average print speed. The Selphy CP770 printed a photo at an average rate of 0.79 pictures per minute, a score faster than last year's Selphy CP740, Epsoms PictureMate Pal PM200, and Epsoms PictureMate Snap. These types of printers are marketed as fast, easy-to-use printers that people can print with at social gatherings immediately after taking a photo, and we're impressed that Canon is still ahead of the competition. The Selphy handled a wide range of colour with precise detail and separation. Our pictures had a soft feel to them and could use a warmer tone, but we feel comfortable recommending the CP770 for the amateur photographer and home user.
