This is not a malfunction. Can anyone with reallife experience under the aforementioned conditions comment on the above. Particularly, Id be interested in the effects of a series of pressure changes i.e. flights with an interval of a few days in between. I would highly appreciate any feedback on this. Regards, RonI never had any bubbles inside the lens and I start shooting straight when I leave the plane. Weve been in all sorts of planes, from small to big boeings, so. The only thing I once experienced was a condensation warning, wich was gone in 30 minutes. Good luck Andre Might be more likely if the camcorder is not in a pressurized cabin, and if the inflight time is very long. Should be no problem. I have done it several times. A portion of the lens is liquidfilled, and as the ambient atmospheric pressure decreases, any gas air in the lens liquid expands to form a visible bubble. This happened with my camera while high on a mountain in Utah that is, the elevation was high, not me. However, the bubble was only visible when pointing the camera either straight down at the ground or straight up in the air. While holding the camera horizontal, the bubble rose to the top of the lens and was not in the field of view. After returning to sea level, the bubble did go away.
