A Canon kamerához eddig sehol sem tudtam a kiegészítő alkatrészeket beszerezni. Van esetleg valakinek ezzel kapcsolatos ötlete Most konkrétan egy DMMV600hoz az 590, 630, 650 is megegyezik az adott alkatrész szempontjából keresek LCD panelt. Csak a panelra ragasztott foliakábel sérült, de javíthatatlan helyen és módon. Jó pénzért egy működő bontott darabnak is örülnek, ha valakinek porosodik egy ilyen a fiokban. <http://ambalaagro.com/userfiles/dsc-gsm-gs3060-manual.xml>

Where do I get one please I charged battery and all bells and whistles seem to operate except me!! Also what cassette should i get. Must you install a Cassette before the prime system will function. See! I need help! Ah well you cant win them all.! Ah well you cant win them all.! Probably just doubleclicking on the file will do this for you automatically. Where do I get. A battery can show 12 volts on a multimeter and still not have enough voltage to start a car. The voltage will be adequate to operate most electrical functions but inadequate to crank the car. If you hear a clicking sound when you turn the key, the starter is not getting enough voltage. If your battery isn't being charged up enough from a faulty alternator the low voltage will make your car go CRAZY. Best thing to do is buy a Haynes or Clintons repair shop manual at your local AP store for your particular vehicle. Then read up on it in the trouble shooting section or the step by step RR section. You can purchase these at your local Auto Parts store or buy them on line at ebay burdfrenzy. Not even a click. Battery, fuses, all bells and whistle working except starter. Parked it and next morning, nothing. Even tried to start it in different gears automatic. If your are planning on taking it to the shop be prepared to go if it starts, you may not get another chance. Don't charge it or anything when the low battery notice comes on. After it completely dies, put it on the charger only until it says charge complete. You might have to do it a few times to get ur battery performing as it should. If you charge ur battery too often, it causes ur battery to swell weird I know and your battery starts resisting charge. Hope this helps!! I used to have the same phone and the same problem. I did this, and now my mom is using the phone and has an exceptional battery time I would say you got a bad battery! Ive looked on the net for the above but the only site Ive found wants stupid amounts of money for the manual and cable. Any

ideas where I can download the manual and what cable I need to connect the camcorder, I presume to the USB port and a site for any software I need. Many thanks, Dave I'm sure they have a download area for manuals. Mark. I used a firewire to connect my Camcorder Canon MV430i with my old PC, but I can't use this cable with my iBook no firewire entry. Do you have any information about using this Camcorder with Mac. Thanks a lot. On doing a bit of research I discovered that the USA equivalent of my camcorder the MD160 was the ZR850 and I could download a copy of the manual F.O.C from the US Canon site. I believe that the equivalent US spec to your camcorder is the ZR65MCA. If you go on the Canon US site and go to the support tab it is possible to download the manual etc from there. There may be minor differences but at least all the basics should be the same. Hope this is helpful. RG Looks like myself and Peter were posting at the same time!!!

I answered the original 2005 post referring to a DMMV530. Peter I used a firewire to connect my Camcorder Canon MV430i with my old PC, but I can't use this cable with my iBook no firewire entry. Do you have any information about using this Camcorder with Mac. Thanks a lot. Firewire is often referred by the following different names, but is exactly the same thing iLink Sony name, IEEE1394, DV port. Mark. I am another that is trying to use a camcorder for the first time in years it's been in the garage for about 4 years ish. Does anyone have any USB drivers for Vista I am another that is trying to use a camcorder for the first time in years it's been in the garage for about 4 years ish. Does anyone have any USB drivers for Vista USB is for transferring stills only. See post 2 above. I am also assuming that the camcorder only has a standard USB port or a firewire port. If both the above are true then I think you are putting the mini USB cable into the 4 pin firewire port on the camcorder, and this would be why it doesn't push home securely. Mark. Powering Your Camcorder

Before operating your camcorder, you will need to use the power adapter to:

E Provide power from a mains outlet
or
Charge a battery pack

Notes:

- The power adapter converts current from a household power socket (100–240 V AC, 50/60 Hz) to the DC current used by your camcorder.
- If the adapter is used next to a TV, it may cause bars to appear on the TV — move the adapter away from the TV or the aerial cable.

Connecting the camcorder to a mains outlet

Use the power adapter to provide your camcorder with instant power from a mains outlet. Always turn the camcorder off before connecting/removing the power source.

1. Set the **POWER** switch to **OFF**.
2. Connect the power adapter to the camcorder's **DC IN** terminal.
3. Connect the power cable to the power adapter.
4. Plug the power cable into a mains outlet.
5. Disconnect the power adapter from the camcorder after use. Unplug the power cable from the mains outlet, then disconnect it from the adapter.
