Canon PowerShot A2300 equipped with a highresolution 16MP CCD sensor delivers rich and clear images for largescale prints or creative cropping. The 5x 28140mm Optical Zoom lens delivers outstanding optical performance and versatility. The Digital IS reduces the effect of camera shake and subject movement, ensures clear, steady shots. The PowerShot A2300 features Smart Auto function, which detects the scene and automatically selects the optimal settings from 32 variables. With Smart AUTO, all you have to do is frame your shot and capture away. [Gordon's In Camera book.](#) [Rent gear from Borrow Lenses](#) Most manufacturers have 5x zooms in their budget ranges so its not a standout feature, and neither is a 16 Megapixel sensor, though you might question why Canon is increasing the pixel count on the sensors for its PowerShot Aseries models when its opting for reduced resolution CMOS sensors on its HS models. The test results confirm that, as far as the A2300 is concerned, more isnt necessarily better. Alternatively get yourself a copy of my [In Camera book](#) or treat me to a coffee! Thanks. [Canon PowerShot A2300 review](#) Written by Ken McMahon [Intro Quality Samples Verdict](#) [Intro](#) The Canon PowerShot A2300 is a budget pointandshootcompact introduced in January 2012. It has a 16 Megapixel CCD sensor and a 2.7in screen with 230k pixels. The 5x zoom boasts a 28mm wide angle and a bright f2.8 maximum aperture, an improvement on the 4x zooms of the 2011 budget PowerShots.

If the A2300 is to replace last years A2200, then Canon hasn't yet removed it from the PowerShot range. When it was released, the 14 Megapixel, 4x zoom A2200 was the slimmest A series compact yet produced, but the A2300 is slimmer and lighter still. It's not the least expensive nor the most basic PowerShot, that honour belongs to the larger and heavier PowerShot A810 and the optical viewfinder equipped A1300 which is powered by a couple of AA batteries. Moving up the range, the PowerShot A2400 IS shares almost the exact same specification, but adds optical image stabilisation. The other two models are the touchscreen A3400 IS and the top of the range PowerShot A4000 IS with an 8x zoom and 3 inch LCD screen. In this review I've compared the A2300 with its more capable stablemate the A3400 IS. The A2300 and A2400 IS are similar in all but optical image stabilisation and there's only a few dollars difference in price, so it's an easy call to decide whether that's worth it to you. But the PowerShot A3400 IS has more to offer than optical image stabilisation, it boasts a 3 inch touch screen. Read my full review to discover whether those features are worth paying the extra for, or if the budget A2300 is the ultimate value for money PowerShot. The bold styling that used to define A series PowerShots has been gradually toned down and the front of the A2300 is comparatively featureless. No two tone colour scheme, no raised or bulging handgrip, just a plain elegant expanse of silver, red, black or blue plastic with the raised Canon badge providing something for your fingers to gain a purchase on. The retracted lens sits flush with the front panel and the only other features here are the builtin flash and an LED AF illuminator. The back of the A2300 is finished in matt black and it doesn't look quite as elegant as the front, or for that matter as the two tone A3400 IS, the raised and bevelled LCD panel gives it a slightly dated look.

The control layout is functional with a fourway controller at the centre and four glossy black buttons surrounding it. There's a dedicated movie record button and alongside it a button labelled with a question mark which activates the onscreen help system. To dedicate one of only a handful of external controls to the help system shows that this model is squarely aimed at beginners and casual snappers. The two remaining buttons below the fourway controller activate playback and the menu system. The PowerShot A2300's 2.7 inch LCD screen has 230 thousand pixels, in terms of specification this is now pretty much the de facto standard for budget compacts and while it obviously doesn't provide as big and clear a view as the 3 inch touch screen on the A3400 IS, it's bright and contrasty and you have to look hard to notice the slight pixellation that's visible on a screen with this resolution. Like all screens the A2300's can be difficult to see in bright sunlight but I was disappointed to discover that it also has quite a narrow viewing angle both horizontally and vertically. That means that you can't see a great deal if you hold the camera above your head to shoot, plus if you want to review shots with friends you'll need to pass them the camera as they won't be able to see properly from either side of you. It has a maximum range of three metres at the wide angle zoom setting and takes about four seconds to recycle between shots. Unusually for a pointandshoot compact, Canon provides not one, but two optional flash attachments, the HFDC1 and HFDC2. A door on the right of the bottom panel houses the slim NB11L battery which provides enough power for 210 shots under CIPA Camera Imaging Products Association standard conditions, a little on the low side, but then it is a very small and light battery. The SD card slot sits just behind the battery, the A2300 takes SD, SDHC and SDXC cards.

This takes a USB cable for transferring photos and video to your PC and can be used with the optional AVDC400 cable to connect the A2300 to a TV with a composite video port. Canon PowerShot A2300 lens and stabilisation The PowerShot A2300 is equipped with a 5x optical zoom lens with a 28140mm equivalent range. With the exception of the 8x top of the range PowerShot A4000 all 2012 A Series PowerShots now sport 5x optical zooms. While the difference between 4x and 5x doesn't sound all that much, 140mm extends the zoom reach beyond the portrait capabilities of the earlier budget A Series PowerShots and enables you to get a little closer to distant action. But while 140mm is good for the zoo, or, say, indoor school sports events, it won't cut it for serious wildlife photography or stadium events, for that you'll need to set your sights higher, maybe on the 8x PowerShot A4000. The zoom extends quickly and smoothly through the range and there's a 4x digital zoom indicated on screen by an extended zoom bar. The digital zoom crops the frame and seriously degrades the image quality, but it can easily be disabled. This takes a sequence of three shots in quick succession and produces a composite image corrected for camera shake. Previously the only stacking mode we've seen on Canon compacts is the Handheld NightScene mode available on HS models equipped with a CMOS sensor, so it's good to see Canon taking the initiative and providing an alternative to optical image stabilisation for its budget A Series models. Having said that, Digital IS is a bit of a let down. Firstly it's a reduced resolution mode, producing 4 Megapixel images with a size of 2304 x 1728 pixels. Secondly, it automatically sets the ISO sensitivity quite high so as to minimise the effect of camera shake to start with. The crops below are from shots taken with the A2300's lens zoomed to the maximum 140mm focal length.

There's a little bit of camera shake in the left crop and Digital IS has undoubtedly produced a sharper shot, but a better result at full resolution could almost certainly have been achieved by simply increasing the ISO to 200 or 400, or alternatively switching to Smart Auto mode, which would do the same thing for you. Alternatively if you love everything about the A2300, but wish it had optical stabilisation, then there's the otherwise identical A2400 IS. This switch toggles between Auto mode and either Program mode or whatever the current alternate shooting mode is. In Auto mode the Digic 4 processor uses scene detection to determine the best exposure. It works by dividing scenes into those that either do or don't contain people, and determines whether there's any subject movement before then analysing the lighting conditions. The Digic 4 can tell if the subject is backlit, spotlit, if there is blue sky in the frame and if you're shooting a sunset. It can also determine if you're shooting in the dark and whether you have the camera attached to a tripod. Finally it keeps track of focus as well as exposure so can tell if you're lining up a macro shot. All of this works very smoothly in practice though the A2300 isn't infallible. When it detects motion in the frame it automatically switches to tracking AF, but mere camera movement often fools it into doing this and it also occasionally gets the lighting conditions wrong. Ninety percent of the time though it works well and produces great results. Switch out of auto mode and you have the choice of Program mode with control over ISO sensitivity, Exposure compensation, White Balance, and image size among other things. Also Included is Canon's Face Selftimer function which starts the countdown when a new face enters the frame, so you don't need to make a dash for it.

The optical zoom can't be used during recording, which is a bit of a disappointment, only the 4x digital zoom is operational during movie shooting and resulting drop in quality means you'll probably want to avoid it. On a more positive note, any changes you make in Live control mode are retained when you press the movie record button, so you can adjust the exposure, white balance and saturation for movies. You can also use some of the creative effects for movie shooting including the Miniature mode, one of the best and most versatile faux tiltshift effects on any compact. Canon recommends a minimum class 6 speed card for video recording and the maximum HD recording time

on my european review model was a second short of 30 minutes. Canon PowerShot A2300 sample video 1 outdoors, overcast, handheld pan Download the original file Registered members of Vimeo only Outdoors the A2300's 720p25 HD video looks good, but the lack of stabilisation even at the wide angle setting shows. Canon PowerShot A2300 sample video 2 outdoors, sunny, tripod pan with optical zoom Download the original file Registered members of Vimeo only Things are a lot smoother for this tripodmounted panning shot, but the mono mic is quite prone to wind noise and there's no wind cut filter. Canon PowerShot A2300 sample video 3 indoors, lowlight, handheld pan Download the original file Registered members of Vimeo only In this indoor low light panning shot the PowerShot A2300 isn't as responsive to changing lighting condition as earlier PowerShots. There's some visible noise in the frame and, once again, the absence of video stabilisation is obvious. Canon PowerShot A2300 sample video 4 Miniature mode Download the original file Registered members of Vimeo only The A2300 can shoot video using some Creative Effects filters. Here's Miniature mode with playback at 10x producing a six second clip from a minute's worth of shooting. Other options are 5x and 20x.

Canon PowerShot A2300 handling The PowerShot A2300 starts up and is ready to take a shot in two and a half seconds, a fairly average wait for cameras in this price bracket. Without a mode dial or button the menu system has to provide mode switching functions in addition to everything else, which could, but doesn't, create problems. The AUTO position at the top of the four way controller switches between Auto mode and the currently selected the alternate mode listed on the first ribbon of the Func shortcut menu. And if it turns out you need something different, that's easy enough to find on the Func menu. About the only drawback of this setup is that there's no dedicated position on the fourway controller for the selftimer functions. The help button provides contextsensitive concise wellwritten advice and hints on each of the camera's features and functions along with a little schematic showing the position of the controls which are described. It's a big improvement on the previous hints and tips system. The A2300's Auto focussing is pretty sure of itself both in Face AiAF mode and the nine area AF it defaults to when there are no faces in the frame. Like all such systems it relies on good light and reasonable proximity to the subject, but even in low light it's functional if a little slow. The manual says the A2300 can shoot at 0.8 fps in continuous mode and that's exactly what it achieved in testing. Canon's compacts are not known for fast continuous shooting, and so the fact that the A2300 can't even manage to fire off a frame every second comes as no great surprise. If you switch it into low light mode, though, you can get nearly 3fps, albeit at 4 Megapixel resolution and high ISO sensitivities. To see how the quality of the PowerShot A2300 measures up in practice, take a look at my Canon A2300 quality and Canon A2300 noise results pages, browse my Canon A2300 sample images, or skip to the chase and head straight for my verdict.
