Select Product Category Just enter the model number below, and we'll give you a list of links to all the documents associated with it. Rather than have you commit them all to memory, we made our model numbers easy to find. If you don't happen to have them handy, you'll also find the model number printed right on the unit. If your heat pump is geothermal, the model information should be easily found on the front of the unit. You should see the model number printed on ratingplate or decal. Still unable to find that model number. Just call your local Carrier Expert. He or she will be happy to help you. Make sure the temperature is set cooler than the current indoor temperature. If it is not running, make sure the breakers in your home's breaker box or electrical panel are in the ON position. Make sure it's in the ON position. If the system is set for cooling, the blower motor should be running. If not, check to make sure your indoor unit switch is in the ON position. If you have oneinchthick furnace filters, a onceamonth change is recommended. If you don't change it, the filter will eventually block the proper airflow and cause your outdoor air conditioner unit to shut down. Return air grilles are larger and are located on a wall or the ceiling in newer homes. Older homes frequently have return air grilles on the floor. NOTE If your system control has a "Constant ON" feature, you will not always feel warmth, even though air may be blowing. If it isn't, your system won't know to provide heating. Try turning the fan to ON using the fan switch on the control or thermostat to test for power to the furnace. If you have oneinchthick furnace filters, a onceamonth change is recommended. If you don't change it, the filter will block the proper airflow and strain your furnace. Return air grilles are larger and are located on a wall or the ceiling in newer homes. NOTE If your system control has a "Constant ON" feature, you will not always feel warmth, even though air may be blowing. Verify that the circuit breakers are ON or that fuses have not blown. If you must reset breakers or replace fuses, do so only once. Contact your Carrier expert for assistance if the breakers trip or the fuses blow a second time. Check air filters for accumulations of large particles. Check for blocked exhaust air grilles or ductwork. Keep grilles and ductwork open and unobstructed. Defrost time could be five to 20 minutes, depending on temperature and settings. With this information, the dealer will be able to correct any problems. Make sure that the condensate drain tube has a slight slope and is not kinked. Provide your model and serial number. With this information, the dealer will be able to correct any problems. Water likely means the support base has shifted since installation and is no longer level. Soak the core in warm water and mild soap for three hours and then rinse under warm not hot water. Use a vacuum cleaner to remove accumulated dust and then handwash in warm water. Filter life varies from home to home and is based on several factors, but most last from eight to 12 months. If your geothermal unit is connected to well water instead of a closed loop, we recommend the heat exchanger inside the unit be cleaned periodically to prevent the buildup of minerals that can reduce system performance. Change Purolator 2inch thick, highcapacity pleated filters every other month. Warning Carrier recommends you do not perform additional troubleshooting steps you are unfamiliar with. Contact a qualified

appliance technician if your heater is still not working. Carrier heaters vary in style, design and efficiency. Like all appliances, they may experience troubles from time to time; the causes vary. However, a few troubleshooting steps can help you solve common problems. <http://www.stolarstvonamieru.sk/images/data/bosch-wof-manual.xml>

If your heater is not working properly, inspect it and troubleshoot before rushing to call an appliance technician. Bringing it back to optimum performance will ensure it performs optimally during those cold days and nights when you need it most. Set the temperature on the thermostat above the indoor temperature. Setting the temperature at least 70 degrees and higher is ideal. Make sure the unit is getting power. Inspect the fan. Press the fan switch on the thermostat to turn it on. If the fan is dirty, vacuum it to remove damaging particles. Check the SSU switch on your heater if the device is still not producing adequate heat. The switch looks like a light switch on a gray box located at the furnace. Change the furnace filter. How to change the furnace filter varies with different Carrier heaters, so refer to your units manual. You can purchase a filter from an appliance, hardware or retail store if you have your units model number. Inspect the return air grilles. If they are dirty, vacuum them to remove dirt, lint, cobwebs and debris. Make sure furniture is not in the way of the return air grilles. Inspect the supply air registers and make sure they are open and blowing air. If you are looking for oil furnace, you can read our Carrier Oil Furnace Buying Guide. Before you dive into the specific brand review, we highly recommend you to read our elaborate Gas Furnace Buying Guide in advance. There are several crucial steps you need to take before you even start to think about the brand.

Carrier gas furnace is one of PICKHVAC recommendations which is ranked up there with the Trane, Coleman, and Amana. They are twice expensive when compared to other brands like Goodman, Heil and Rheem. Carrier furnace is famous for being reliable and durable. It is a good option if you plan to live in the same house for the next ten years or more. They have one of the best warranties in the market. The Carrier Infinity Series come up with warranties on parts and a lifetime warranty on the body exchanger. Carrier's Features Greenspeed Efficiency Optimization Carrier Greenspeed intelligence was introduced in 2011 on the Carrier Infinity heat pump, and it changed the industry. The heart of Greenspeed technology is a modulating compressor, also called a variable speed compressor. Rather than run at just one single stage or two two stage levels, the compressor speeds up and slows down in small increments between 40 percent to 100 percent capacity. The result is precise heating and air conditioning that optimizes energy efficiency and indoor climate control. Additional benefits of Carrier Greenspeed intelligence are Quieter cycles Balanced indoor temperatures throughout the home More dehumidification during air conditioning cycles Improved performance of air purifiers and humidifiers that are part of the HVAC system Communication Features to Hook up a Smart Phone Only for Infinity Series This is designed for diagnostic tuning and troubleshooting while the basic models do not have this function. We believe this is bells and whistles for the gas furnace, not very practical for homeowners.

Note Carrier communicating thermostat is proprietary which means if something goes wrong you can't buy it at the local hardware store. If there is no stock of your corresponding parts, you have to wait 13 weeks for the part to be shipped from parts center. Carrier's Ideal Humidity System Most of the Carrier gas furnace brands have the Ideal Humidity system. The system adjusts the humidity in

the house along with the temperature depending on the season. This system comes into play during the hot seasons aiding the air conditioner in keeping the house cool. Comfort Heat Technology unique The Comfort heat technology is an intelligently fixed feature with heating cycles. The heating cycles help reduce temperature swings in the house. They help improve the efficiency of the gas furnace and make the house more comfortable. We always advise homeowners not forget to buy extended labor warranty for highestend models. In most cases, the labor fee for the cuttingedge model will be more than you can imagine. What is the most costeffective model For Carrier furnace. When you're looking for the most costeffective heating, the strategy is to find the balance between furnace cost and energy costs. They had used inferior materials to manufacture critical parts like the condensing heat that could not last the expected lifespan of 20 years. All carrier furnaces manufactured after 2008 were not part of this lawsuit.

Contractor Reviews For Carrier The carrier gas furnaces rank with the very best and offer a range of efficiencies and capacities. The carrier just like other brands will only service units they have installed. They also sell service parts to technicians who work for them. This simply means you will pay more for future repairs and servicing. Regular repair guys will charge you less the repair guys from the company. It, unfortunately, hasn't been as efficient and didn't come any close to my expectations. Its warranty is not comprehensive at all has made me incur a lot of costs from the constant repairs of some parts. It also stops working during winter. Not efficient at all yet expensive. The installing technician should have a good understanding of the machines parts and their functionality. This will minimize future malfunctions that may arise. Otherwise, my Carrier Infinity 80 has never had any issues for the time I have used it. It has a high efficiency. Since then I have never faced any negative issue arising from its functionality. It also has reduced our rate of consuming gas and electricity which altogether have surpassed its purchasing cost.

We had to find a quick alternative since winter was nearing. I chose to go for the career performance boost 80 58CTA. So far it has been quite efficient. It serves the entire house despite being quite big because of different parts of the equipment which cover different rooms separately. I do not regret the amount of money spent on the furnace which I was reluctant to do at first. We have been following all the instruction s as stated in the manual and advice by the technician. We have the filters changed as frequently as possible. Despite changing the motors the machine collapsed. I contacted their customer who however didn't seem concerned because the warranty period was expired. It was really evident I needed to research about the best equipment. I decided to go for carrier comfort 80. I never regret this decision. The heating bills aren't as high as I expected them to be which in turn increased my savings. I am yet to do any repairs on this model, and I don't expect to do any repairs soon. If I am to buy again, I will, of course, buy Goodman again although the prices

are a bit high How to Get the Best Carrier Gas Furnace Prices. Firstly, keep in mind that installation quality is always the most important thing for gas furnace project. Hold times are long. This grommet helps isolate the blower assembly from the furnace to reduce noise. The igniter gets very hot and glows bright orange to light the gas burner. If the igniter is cracked or defective, the furnace won't heat. You may have to cut the old clip off to remove the fan blade. This assembly is designed for 40, 60, 80, and 100 thousand BTU model furnaces. Your furnaces BTU rating may be listed on the model number tag. You can also determine the rating from your model number—the 3digit number preceding the hyphen indicates the BTU rating. Be aware that the screw holes are not threaded—you will need to use selftapping screws to install the motor. Is your Carrier furnace not warming up your home like it used to. Carrier gas furnaces use a safety component known as a flame rollout switch to shut down the appliance when it overheats. If your Carrier furnace turns off unexpectedly, knowing the location of the flame rollout switch can come in handy. Fortunately, finding the flame rollout switch on a Carrier furnace takes just seconds. Serious injury or death can occur if repairs are performed while the furnace is connected to electrical and gas supplies.

You can restore the electricity and gas to the furnace when youve completed your troubleshooting or repairs. In upflow models, the top access panel on the front of the furnace shields the burner components, while the bottom panel provides access to the blower components. Remove the burner access panel; pull the panel up and toward you to clear the tabs that hold the panel in place. The burner assembly is mounted to the top of the furnace cabinet. Find the flame rollout switch on the right side of the burner assembly housing. The positioning of the components in downflow models are reversed in comparison to their positioning in upflow furnaces. To access the burner components in a downflow furnace, youll need to remove the bottom front panel. Pull the panel up and toward you to free it. In Carrier downflow furnace models, the flame rollout switch is just above the gas burner. Once the flame rollout switch has been tripped, it must be reset before the appliance can produce heat again. Wait 30 minutes before attempting a furnace reset to allow the motor to cool down. Press and release the raised red button at the center of the flame rollout switch to reset the furnace. You can press the reset button up to three times before troubleshooting the furnaces internal components or calling for repair service; allow 30 minutes between each reset.
