The latest in electrohydraulic controls, numerous seat and adjustability options, and an allnew membrane keypad further simplify comfort, operation and training.

An entirely new HVAC system ensures operators stay comfortable throughout the year. A table of contents is placed at the beginning of each section. Pages are easily found by category, and each page is expandable for great detail. It is in the crossplatform PDF document format so that it works like a

The air conditioner system is charged with HFC134a refrigerant. The compressor receives the refrigerant as a low pressure gas. The compressor then compresses the refrigerant and sends it in the form of a high pressure gas to the condenser. The air flow through the condenser then removes the heat from the refrigerant. As the heat is removed the refrigerant changes to a high pressure liquid. The high pressure refrigerant liquid then flows from the condenser to the receiverdrier. The receiverdrier is a container filled with moisture removing material, which removes any moisture that may have entered the air conditioner system in order to prevent corrosion of the internal components of the air conditioner system. The refrigerant, still in a high pressure liquid form, then flows from the receiverdrier to the expansion valve. The expansion valve then causes a restriction in flow of refrigerant to the evaporator core. The evaporator meters refrigerant flow based on evaporator heat load. As the refrigerant flows through the evaporator core, the refrigerant is heated by the air around and flowing through the evaporator fins. The combination of increased heat and decreased pressure causes the air flow through the evaporator fins to become very cool and the liquid refrigerant to become a low pressure gas. The cooled air then passes from the evaporator to the cab for the operator's comfort.

The electrical circuit of the air conditioning system consists of a fan speed control, temperature control, one 1 relay, a blower motor, blower resistor, A.C. compressor clutch, A.C. low pressure switch, A.C. high pressure switch, and A.C. warning light. 1.
