Scott says on the cover of it, "a friendly and aware guide" for gardeners in the deep south, particularly zones 8b-9a, who have been disappointed by daffodil duds as they desire it and asking about a hosts of nameless daffodils that thrive gracefully in old gardens and abandoned places.â The Van Becks are passionate amateurs whose advice and recommended variety lists are based on years of research in Florida gardens. This is not a slim coffee book but a work of love for all those who "love the daffodils and the hard, beautiful and traditional flowers of the South". (Jn. 2005) Good customer Judy Sanders of Montgomery, Texas, writes: â €œHo cut several stems of tuberose and lasted a full two weeks at home. Every few days I would finish it a little out of the drums and refreshments refreshments water. And, like outside, the fragrance was stronger in the last evenings. We really enjoy this light bulb! â € "Great bouquets of freshly cut tubers are sold today in the street Mexican markets, as they were probably in Aztec Street Markets long ago. Plant your spring and enjoy a precious fragrance from the gardeners for a thousand years. (January 2005) Romans, â €œTwin Sistersâ€™TM, and other classic southern light bulbs are blooming again in Jackson, Mississippi, in the garden of the author Eudora Salty â € "and we helped! The garden opened to the public last spring after a careful restoration led by the landscape historian Susan Haltom who turned to us for authentic bulbs. Our client and friend Jeannette Hardy writes in November. 2004 issue of horticulture: â € "If you go to the garden on Pinehurst Street, prepare for a primer on native plants and memorabilia dominating the landscape of Mississippi. There are camellias of each strip, banana shrub and other fragrant plants, along with bulbs with balancers - daffodils, spider lilies, silver bells and hundreds of other favorites who planted Welty's writings in the deep ground of the deep south. â € To learn more, visit mdah.state.ms.us/welty/index.html. (December 2004) Our creative customer Sharon Black of Paris, Texas, writes: â € "I have finally found a solution for lockers. In spring, I put what we Southerners call the pig cable at the top of the ground prepared in my beds. This wire is built with 4 x 4 inch square openings and can be cut to fit with cutters. I put decorative flat stones on the edges of the wire. Most annuals do well when one is planted in each square. For larger plants, I only get a square. Once the plants grow a little, the thread cannot be seen or can be covered with mulch immediately after sowing. The â €œDilos cannot break the thread that lies between the plants and soon becomes frustrated and renounce ... (April 2004) Felder Rushing, Demi-Dio horticulture, Comic garden and author of passissaline plants and other Great books, stopped to see us last summer. Recently he emailed us: â € "When I talk about places to start shopping for hard plants and pastilongs, I greet around three catalogues and give three web addresses: your (old gardens of the house) Mike shoup (ancient emporium rose) and Kent Whealey (seed sprouts). I said you all have three things in common: a love for plants that go beyond the pale, networking with other hardcore plants and share both plants and what you learn. »We love you too, Felder! (March 2004) Thad Howard of Texas spent 45 years collecting and growing bulbs that like it hot. Its encyclopaedic bulbs for warm climates are a fantastic companion, academic for one ofBest-selling books of all time, Scott Ogden's garden bulbs for the south. Read them both before you get hot again! (January 2004) Bill is the environmental editor for the mobile press log, and after reading one of his articles I probably wish he had written Local newspaper. Recently he wrote, "I remind you where it is most likely to find bulbs that grow well in our climate: old gardens of the house." So he listed the daffodils he found most reliable in his 9 garden area. His first three are "CamperNle" TM TM "CARLTON", and "GRAND MONAROQUE" [ATTUALMENTS NOT AVAILABLE], and also strongly recommends "Revithian" € TM "Lent Lily (N. Pseudonarcissus), â € Jonl also "lavalanche" â € œ (December 2003) The secular live oak we told you a couple of months ago was threatened by a highway project was saved, thanks to a glittering support effusion from our good client Coleen Perriloux Landry. The big old tree and its surrounding land were donated to the local government and three projects that would have fatally damaged that was redesigned to protect it. Click here and scroll down the page for a photo and more information and make sure you also read the editorial from the New Orleans Times-Picayune. Who says a person can't make a difference?! Thanks, Coleen, for inspiration, and for saving this very historical plant. (July 2003) Our good customer Jim Massey from Moncure, NC, writes: â € "Your Gladiolus Byzantinus was spectacular this spring - just like being in my grandmother's garden in Mart, Texas, in the 1950s. I bought this plant a dozen times from many sources looking for the real old variety. It is worth the price and more! â € (Catalogue 2003-04) Our good customer Wesley Greene from Colonial Williamsburg, VA, writes: â € "We are excited to be able to include your lamp bulbs in the demonstration beds at the Colonial Garden. They were a great charm for our visitors last year, and we often recommend your website to interested visitors. Your company is a wonderful resource. - Catalogue 2003-04) When a 800-year live oak is threatened by an extension of \$6 million highway, what do you do? Well, if you thought perilloux Landry of Metairie, La, call local officers and even the governor, advise the media, organizes volunteer crews to clean the woods that surround him and speak eloquent about the value of a living giant was already old when La Salle affirmed the Mississippi Valley for Louis XIV in 1682. Thanks to Coleen's efforts, the point is studying alternative plans for re-routing the project and saving Dick Yeold. For a 14-state register of old live oaks, visit the Live Oak Society website at www.louisianagardenclubs.org/live_oak_society/about.html. (March 2003) Felder Rushing is one of the most fun horticulture kids and enthusiasts to get more people to have fun. We're proud to call him a friend. FelderHe visited here last month, he chose our brain for his new edition of Passalong plants, and then wrote about us for Jackson, Mississippi, Clarion-Ledger. If you have lost its column there, you can enjoy here: here: (March 2003) Thanks to all those who shared the stories of their first spring flowers! Here are two of our favorite South Gardeners. Scott Thigpen by Sumter, SC, wrote: â €I grew up in Florida, where we have no spring blooms, excite me when I see the first daffodils bloom here. They are usually our first change from brown and dead to color and life. â €The first thing that starts February 1st of this year and 'â € An abundant stall of small yellow daffodils naturalized by an old family home. This is N. pseudonarcissus, often known as the Little Lily and loved from the colonial times. Doug Ruhren in Belmont, NC, has flowers that bloom throughout the winter, but also wrote about the Little Lily: â €I saw the first yesterday, 2.7.03. He appeared as soon as open. The gardens here were opened in 1989, but they are clearly a previous inhabitant. They are mixed with â €â € "scraped eggs" [â € Van Zionâ € or â € butter and eggsâ € »Around an ancient Yoshino cherry. â € (March 2003) Even if your dahlias may have stopped and seemed stressed this summer, it is likely to recover in autumn, which is their glory, season. They are native to the highlands of Mexico and love the cool. To better flourish, give them a lot of water and don't forget to fertilize. Glads can grow with articulated stems in particularly hot weather conditions, since they tilt a little during the heat of the day, they can't keep the cells full of water, and then growing up at night. Tripids (small insects that suck) can attack your gears when it's too hot. Insecticide soap is a delicate check. Heat also affects flowers color. The lilies â €â € "Black Dragonâ € in many areas this year have been pale and «Green Peckerâ € [not available] more yellow clearings due to abnormally high temperatures. Dahlie and other flowers often take pink colors like autumn weather cools. (September 2002) Ohg and historical daffodils have lost a great friend last year with the death of John Van Beck, founder of Florida Daffodil Society. John was full of enthusiasm, humor, deep knowledge of the narcissus and a nonconformist spirit. I'll miss you a lot. John tested hundreds of narcissus in Tallahassee area 8b to find out the best for the «Belt of Muss», where modern and traditional cultivars often fail. For those we offer, click here. Everything will be good in most of the south. (2001 catalog) I wish we had a book like this for each region of the country. Lively, serious and well illustrated, begins with eight chapters, each of a different expert, on how different cultures - Native American, Spanish, French, African American, and so on â € "have shaped the southern gardens. The second Metâ is an encyclopedia of the southwrying plants, including many light bulbs. It is full of historical facts, growing, and fun memories of Bill and Greg. (catalogue 1996)
