Rename drive letter

Rename drive letter windows xp. Diskpart rename drive letter. Rename drive letter windows 7. Rename drive letter in cmd. Rename drive letter windows 10 cmd. Rename drive letter windows 10. Rename drive letter powershell. Rename drive letters windows.

This tutorial will show you how to map onedrive as a network drive folder in your Windows 10 PC and assign it a Letter of drive as we go. You will be able to look for all your files on your OneDrive without the need for SmartFiles or placeholders, which have now been in Windows 10. Why would you like to do this? If you want to be able to easily navigate to your files in Explorer without having them on your local computer, then this is a reason. You can search for files that are "online only" with this method. If you want to keep your files in OneDrive, but not on your local machine, but have apps or programs that need a local drive path to work with them, then this solution is for You. How to realize it. 1. Using your favorite web browser, you will go to OneDrive.com and make the login in your OneDrive account. 2. Open any folder in your OneDrive account. 3. Now, take a look at the address bar. The URL here is very important. Something like: [Box = URL] [/ box] What you want is the part "cid = 1234567890AbcdeP". Copy only the numbers / letters after "cid =", which in this example would be "1234567890ABCDEF". 4. Open Windows Explorer. Select "This PC" in the left pane. Now the tape under the "Computer" tab will have a selection for "Map Network Drive". Let's map a network drive. Select it. 5. In the "Map Network Drive" dial box that appears, select the drive letter you want to use for OneDrive. 6. Now in the "folder" text box, type " followed by the cid number that you recovered in step 3. Example: [Box = folder] https: // D . docs.live.net/1234567890abcdeff/box] 7. If you want the drive to be available every time you enter Windows 10, select "Reconnect to Login." 8. Check "Connect using different credentials" so you can confirm your OneDrive login information. If your login name is populated and it starts with "Microsoft account", be sure to remove that part. Only your email to the OneDrive login should be in this box. It will have time to connect the first time, and you will eventually be prompted to enter your login to OneDrive. After entering your credentials, it will take time to your computer to connect completely. It will connect more fast in the next time you enter your computer, but you can slowe the login just a bit. It took about 10 minutes before the files begin to show on my pc, but my new drive card is available in Windows Explorer with all files and folders from my OneDrive. Any application or program that can read files on your local PC now can access your OneDrive files. Now, for another power tip: as an additional tip, once you set everything as explained above, you can rename this newly mapped network unit of " (G)", for something more suitable ... like "OneDrive"! Thanks, Ed, for this valuable finishing touch. It makes it a little better look. For those of you who are using the two-step verification process, Ed Boland registered an article for us that gets the steps on how to accomplish it. Robert McMurray - Using the WebDAV Redirector with OneDrive Part 2 - Two-step check and we have another tip of David Chapman5. Apparently, Windows 10 will automatically fill your email address with "Microsoft account" before attempting to log in to OneDrive while trying to map the drive. Just make sure you delete this text before continuing. Thank you David! I just gave up an hour imagining because I was getting the message "Access denied" when trying to map a letter from to my OneDrive account. The small login box preferred my login name and prefixed with "Microsoft account". Delete these words from your login name and everyone is happy. The last edition by rapdog; 12-21-2016 to S 06:41. Reason: Adding Additional Information and Help RumoredNow, Messig, JMShub and 11 11 ths. 07-31-2015 10:51 am as 14 07-31-2015 11:58 I am 5 https: // fanruns. WindowsCentral.com / Showthread.php? t = 371145 & p = 3178688 & viewfull = 1 # post3178688 Thank you for this work around. I was about to revert to Windows 8 as being able to visualize my unique inverter was a huge resource for me. Let's hope Microsoft will also do not disable this. And I hope they create a decent resolution for a unit in the future as I am enjoying Windows 10. Rappog and Gpobernardo like that. 07-31-2015 04:40 like 2 We will not deactivate this too. People who have succeeded in the creation of the old alternative solution can still use the same configurations, is only a question of how to obtain the number of the altered CID. Microsoft arrived where you did not get it anymore "by clicking on the right button" and copying a link in OneDrive, but accessing a folder, I discovered that it now appears in the URL anyway, then the steps are just different. He would not have broken an existing configuration, and Microsoft probably would have many anger corporate clients in their hands changed the access of access. I do not mind this being disabled soon. Rumorednow and gpobernardo like that. 07-31-2015 05:47 Like 2 as an added tip, once you set everything as explained above, you can Rename this newly mapped network unit of " g)", for something more suitable ... like "OneDrive"!) Thomasomorrell, Rappog, RumoredNow and 1 others like this. 07-31-2015 06:50 Like 4 as an added tip, once you set everything as explained above, you can Rename this newly mapped network unit of " g)", for something more suitable ... like "OneDrive"!) GREAT TIP, ED! I will add it to the tutorial and give it criterion. Ed Boland, RumoredNow and Gpobernardo like that. 07-31-2015 07:00 pm as 3 Thank you, ed for that valuable finish touch. It makes it a little better look. You're welcome. For those who wonder, actually keep the new name after restarting the PC. I assign my ondrive the drive letter (O) for reasons Rhapdog, Gpobernardo and Davidinct so. 07-31-2015 07:11 pm as 3 07-3178860 07:22 pm like 3 https: // fanruns. windowscentral .com / showthread.php? t = 371145 & p = 3778970 & viewfull = 1 # post3178970 I could kiss you now. The thought of downloading all this data on my terrible internet was making me extremely angry with Microsoft. 07-31-2015 09:00 Like 1 I'm getting access after I enter my login credentials. Could it be my two-step verification causing it? Ed Boland and Rapdog so. 07-31-2015 09:56 Like 2 I am receiving access after entering my login credentials. Could it be my two-step verification causing it? This is entirely as possible. I do not have a two-step check-on check, so I can not say for sure. It is entirely as possible that this solution simply does not work with the two-step verification. 08-01-2015 05:53 I'm like 1 I'm getting access After entering my login credentials. Could it be my two-step verification causing it? This is entirely as possible. I do not have a two-step check-on check, so I can not say for sure. This is Possible that this solution simply does not work with the two-step verification. Apparently, it is really possible to configure this with the 2-step verification by generating an application password. Take a look at the process here: Robert McMurray - Using the WebDAV Redirector with OneDrive Part 2 - Verification of two steps Rappog, Thomasonorrell, RumoredNow and 1 others like this. 08-01-2015 08:25 am as 4 Excellent, ed, Thank you for that. This is getting better and better, thanks to the entrance of people. I will add the link to Robert McMurray's article in the opening post. Ed Boland and Gpobernardo like that. 08-01-2015 08:43 am as 2 Thank you for this tutorial. I have successfully mapped my onedrive cid = as a network drive and rename it as OneDrive (O). How to prevent the original OneDrive from continuing to occupy 54.GB of space in my local unit? Gpobernardo and ed ball so. 08-02-2015 10:01 I'm like 2 was able to find out - I do not syncribe all files and folders in My one. Select Setups by clicking with the right mouse button on the OneDrive icon in the Notification Tray and choose Folders. 55GB returned to my C: Drive! Gpobernaro, rumorednow, ed ball and others like this. 08-02-2015 11:41 I'm like 4 But I also have to enter password whenever I connect PC. In addition, do not support Música Grove ... , rip 08-03-2015 05:24 pm like 0 Groove Music supports music access in OneDrive without the need to map the OneDrive to a network drive. He can also support Groove's music when you add the drive / folder location to places to look for groove music. This is 2 ways that supports Groove Music. As fast or slow depends on the speed of your Internet connection. I can not help you there. Rumorednow and ed ball so. 08-03-2015 05:50 pm like 2 Wow - did not know that was possible! Thanks for the post clearly written !! Forgive my ignorance even more, but is so the OneDrive could be used as a network destination for the Windows backup / file historic? Rapdog and Ed Boland like this. 08-03-2015 08:30 like 2 I did not try as a network destination for the backup / file. I do not see why it would not work, however. Enter a shot and let us know! Ed Boland, Albertico and RumoredNow like this. 08-04-2015 08:16 is like 3 looks like the backup application of the "Historic of File" Microsoft in Windows 8.1 Do not allow OneDrive once it has been mapped. I will check other backup utilities. 08-10-2015 09:46 Like 0 does, as if I am offline and want to fall something in, will do Upload later? Can you make available offline files? So just hold this on an external drive? Trying to make my new minor positive laptops à € à € à € à € œ1
