Considering I am a beginner and still learning, this seems pretty expensive. \$38. per month on Mac and would much rather pay a larger sum to own it. I wish ther trial was longer because since I am just learning, I am not getting the value for what I am paying. Hoping I learn faster, or I may just look for another app. I'm a Coreldraw power user for years, and was very happy when the program came out for Mac systems, but it is still very buggy and crashes quite often, files dont show previews, recents tab doesn't open files. Blacks are gray, and exporting in JPG docent give you the cria color from the original file, i resolved this exporting first to PDF and then exporting from Preview tho other formats and quite a few more flaws, with time i hope they will iron out these problems (hopefully)! do recommend the program for power users, but its like 75% to 80% finished. Hi Albert,I'd love to get more details on the items you've identified above as we have not been able to replicate, perhaps there is something specific in your file, the steps you follow, or a specific application or export setting? Have you reported any to Customer Service, we can look up a ticket to triage further if you have.If not, we can go through them one at a time and see if we can replicate the problems you're experiencing. While I am extremely pleased to see CorelDraw in the App Store, I am disapointed it is the same price as the online bundle, but without the bundle.I am thinking of switching, but the app crashes about once a day, so a bit frustrated.The developer, Corel Corporation, indicated that the app's privacy practices may include handling of data as described below. For more information, see the developer's privacy policy. The developer does not collect any data from this app. Privacy practices may vary, for example, based on the features you use or your age.
